Engineering and Medicine last reviewed the state of the science on nutrition during pregnancy and lactation 30 years ago. The resulting consensus study reports from the Institute of Medicine Nutrition During Pregnancy IOM 1990 and Nutrition During Lactation IOM 1991 summarized the scientific evidence and provided nutrient recommendations. In the decades since the release of these two reports, the body of evidence on the relationships between nutrition during pregnancy and lactation and maternal and infant health and chronic disease has continued to grow and evolve. At the same time, the demographics of the population have shifted, giving rise to new considerations. To explore the evidence that has emerged, the National Academies conducted a 2 day workshop in January 2020. This publication summarizes the presentations and discussions from the workshop.

Handbook of Nutrition and Pregnancy Carol J. Lammi-Keefe, Sarah C. Couch, Elliot Philipson, 2008-06-01. The Nutrition and Health™ series of books has an overriding mission to provide health professionals with texts that are considered essential because each includes 1 a synthesis of the state of the science, 2 timely in depth reviews by the leading researchers in their respective fields, 3 extensive up to date fully annotated reference lists, 4 a detailed index, 5 relevant tables and figures, 6 identification of paradigm shifts and the consequences, 7 virtually no overlap of information between chapters but targeted inter chapter referrals, 8 suggestions of areas for future research, and 9 balanced data driven answers to patient health professionals' questions which are based on the totality of evidence rather than the findings of any single study. The series volumes are not the outcome of a symposium. Rather, each editor has the potential to examine a chosen area with a broad perspective both in subject matter as well as in the choice of chapter authors. The international perspective, especially with regard to public health initiatives, is emphasized where appropriate. The editors, whose trainings are both research and practice oriented, have the opportunity to develop a primary objective for their book, define the scope and focus, and then invite the leading authorities from around the world to be part of their initiative. The authors are encouraged to provide an overview of the field, discuss their own research,

and relate the research findings to potential human health consequences *Culinary Nutrition* Jacqueline B.
