Peer-to-Peer Systems Dmitry Korzun, Andrei Gurtov, 2012-11-12 The field of structured P2P systems has seen fast growth upon the introduction of Distributed Hash Tables DHTs in the early 2000s The first proposals including Chord Pastry Tapestry were gradually improved to cope with scalability locality and security issues By utilizing the processing and bandwidth resources of end users the P2P approach enables high performance of data distribution which is hard to achieve with traditional client server architectures The P2P computing community is also being actively utilized for software updates to the Internet P2PSIP VoIP video on demand and distributed backups The recent introduction of the identifier locator split proposal for future Internet architectures poses another important application for DHTs namely mapping between host permanent identity and changing IP address The growing complexity and scale of modern P2P systems requires the introduction of hierarchy and intelligence in routing of requests Structured Peer to Peer Systems covers fundamental issues in organization optimization and tradeoffs of present large scale structured P2P systems as well as provides principles analytical models and simulation methods applicable in designing future systems Part I presents the state of the art of structured P2P systems popular DHT topologies and protocols and the design challenges for efficient P2P network topology organization routing scalability and security Part II shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable performance and security constraints Although the strategies are local their efficiency is due to elements of hierarchical organization which appear in many DHT designs that traditionally are considered as flat ones Part III describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge still partial about the entire system These methods were formed in the evolution of hierarchical organization from flat DHT networks to hierarchical DHT architectures look ahead routing and topology aware ranking Part IV highlights some known P2P based experimental systems and commercial applications in the modern Internet The discussion clarifies the importance of P2P technology for building present and future Internet systems **Benchmarking Peer-to-Peer Systems**

Wolfgang Effelsberg, Ralf Steinmetz, Thorsten Strufe, 2013-07-10 Peer to peer systems are now widely used and have become the focus of attention for many researchers over the past decade A number of algorithms for decentralized search content distribution and media streaming have been developed This book provides fundamental concepts for the benchmarking of those algorithms in peer to peer systems It also contains a collection of characteristic benchmarking results The chapters of
