

Topic 3: Philosophical Perspectives

MODULE 2: THE SELF FROM VARIOUS PERSPECTIVES

▼ MODULE OBJECTIVES

- Discuss the different representations and conceptualizations of the self from various disciplinary perspectives, namely philosophy, sociology, anthropology, and psychology;
- Examine the different influences, factors, and forces that shape the self;
- Compare and contrast how the self has been represented across the different disciplines and perspectives; and
- Demonstrate critical and reflexive thought in analyzing the development of one's self and identity by developing a theory of the self.

The Philosophy of Self defines, among other things, the conditions of identity that make one subject of experience distinct from all others.

TOPIC 3: philosophical perspective of the self

▼ What is Philosophy?

- Philosophy: the term was derived from Greek words – '*Philein*' and '*Sophia*' which literally mean '*love*' and '*wisdom*'. Taken together, they mean "*the love or pursuit of wisdom*."
- Hence, philosophy is "*a way of looking at the world and giving it meaning. It can provide a high quality method of examining our beliefs.*"

▼ What is Philosophy of Self and why it is important?

1. A philosophy is the pinnacle of one's life.

Philosophical Perspectives 3 Philosophy:

Philosophical Perspectives on Psychedelic Psychiatry Chris Letheby, Philip Gerrans, 2024-08-19 A recent wave of research in psychiatry and neuroscience has re-examined the properties of classic psychedelic substances also known as serotonergic hallucinogens such as psilocybin, LSD, and DMT. Evidence to date suggests that psychedelics can be given safely in controlled conditions at moderate to high doses and may have potential as therapeutic agents in the treatment of various addictive and mood disorders. The main mechanism of action appears to be the induction of a dramatically altered state of consciousness, but the details of how psychedelic-assisted psychotherapy works are hotly debated, as are the relations between psychedelic experiences themselves and the neural changes induced by the drugs. Philosophical Perspectives on Psychedelic Psychiatry addresses the fascinating philosophical questions raised by the renewed psychiatric use of psychedelics, with chapters from leading philosophers of mind, science, and psychiatry centred around three main themes. Chapters in the self and mind section ask what can we learn about the self and the mind from psychedelic science. Chapters in the science and psychiatry section address methodological, theoretical, and clinical questions concerning how psychedelics can best be studied scientifically and used therapeutically, and how they might work to relieve psychiatric suffering. Finally, chapters in the ethics and spirituality section address broader questions about the interpretation of psychedelic experience, its ethical implications, and its possible roles in the broader culture.

Stich and His Critics Dominic Murphy, Michael Bishop, 2009-03-12 Through a collection of original essays from leading philosophical scholars, *Stich and His Critics* provides a thorough assessment of the key themes in the career of philosopher Stephen Stich. Provides a collection of original essays from some of the world's most distinguished philosophers. Explores some of philosophy's most hotly debated contemporary topics, including mental representation theory, of mind, nativism, moral philosophy, and naturalized epistemology.

Nondescriptive Meaning and Reference Wayne A. Davis, 2005-07-14 *Nondescriptive Meaning and Reference* extends Wayne Davis's groundbreaking work on the foundations of semantics. Davis revives the classical doctrine that meaning consists in the expression of ideas and advances the expression theory by showing how it can account for standard proper names and the distinctive way their meaning determines their reference. He also shows how the theory can handle interjections, syncategorematic terms, conventional implicatures, and other cases long seen as difficult for both ideational and referential theories. The expression theory is founded on the fact that thoughts are event types with a constituent structure and that thinking is a fundamental propositional attitude distinct from belief and desire. Thought parts ideas or concepts are distinguished from both sensory images and conceptions. Word meaning is defined recursively: sentences and other complex expressions mean what they do in virtue of what thought parts their component words express, and what thought structure the linguistic structure expresses, and unstructured words mean what they do in living languages in virtue of evolving conventions to use them to express ideas. The difficulties of descriptivism show that the ideas expressed by names are atomic or basic. The reference of a name is the extension of the

idea it expresses which is determined not by causal relations but by its identity or content together with the nature of objects in the world Hence a name's reference is dependent on but not identical to its meaning A name is directly and rigidly referential because the extension of the idea it expresses is not determined by the extensions of component ideas The expression theory thus has the strength of Fregeanism without its descriptivist bias and of Millianism without its referentialist or causalist shortcomings The referential properties of ideas can be set out recursively by providing a generative theory of ideas assigning extensions to atomic ideas and formulating rules whereby the semantic value of a complex idea is determined by the semantic values of its components Davis also shows how referential properties can be treated using situation semantics and possible worlds semantics The key is to drop the assumption that the values of intension functions are the referents of the words whose meaning they represent and to abandon the necessity of identity for logical modalities Many other pillars of contemporary philosophical semantics such as the twin earth arguments are shown to be unfounded

Linguistic Luck Abrol Fairweather, Carlos Montemayor, 2023-05-23 Despite the considerable attention the topic of luck has received in ethics and epistemology very little has been published in the philosophical literature overtly on linguistic luck The essays collected here provide the first sustained examination of the diverse forms of linguistic luck the mechanisms available to reduce the impact of linguistic luck and how to cope with residual luck not eliminated by the causal inferential and intentional mechanisms which aim at its eradication Of primary interest is not some hitherto unnoticed widespread prevalence of luck in the determinants of meaning and communication but rather the impressive extent to which luck is reduced or eliminated therein Whether through causal inferential or intentional means the determinants of meaning and communication are impressively independent of luck and chance In fact it is difficult to imagine a world with human language where efforts to communicate succeed no better than chance Linguistic communication is only possible because robust luck reducing variables are at work The essays collected seek to understand the diversity scope and mode of operation of luck reducing mechanisms in language While it is not possible here to cover the full range of linguistic phenomena affected by luck a wide range of issues in linguistics and philosophy of language are investigated including syntax processing demonstrative reference conversational implicature testimony lexical innovation joint attention communicative value conventionalism vs anti conventionalism metasemantic safety and semantic skepticism to name a few

The Red and the Real Jonathan Cohen, 2009-06-25 The Red and the Real offers a new approach to longstanding philosophical puzzles about what colors are and how they fit into the natural world Jonathan Cohen argues for a role functionalist treatment of color a view according to which colors are identical to certain functional roles involving perceptual effects on subjects Cohen first argues on broadly empirical grounds for the more general relationalist view that colors are constituted in terms of relations between objects perceivers and viewing conditions He responds to semantic ontological and phenomenological objections against this thesis and argues that relationalism offers the best hope of respecting both empirical results and ordinary belief

about color He then defends the more specific rolefunctionalist account by contending that the latter is the most plausible form of color relationalism

Naming and Indexicality Gregory Bochner,2021-12-09 How do words stand for things Taking ideas from philosophical semantics and pragmatics this book offers a unique detailed and critical survey of central debates concerning linguistic reference in the twentieth century It then uses the survey to identify and argue for a novel version of current two dimensional theories of meaning which generalise the context dependency of indexical expressions The survey highlights the history of tensions between semantic and epistemic constraints on plausible theories of word meaning from analytic philosophy and modern truth conditional semantics to the Referentialist and Externalist revolutions in theories of meaning to the more recent reconciliatory ambition of two dimensionalists It clearly introduces technical semantical notions theses and arguments with easy to follow step by step guides Wide ranging in its scope yet offering an accessible route into literature that can seem complex and technical this will be essential reading for advanced students and academic researchers in semantics pragmatics and philosophy of language

Realism and Truth Michael Devitt,1997-01-12 In a provocative thesis philosophy professor Michael Devitt argues for a thoroughgoing realism about the common sense and scientific physical

world and for a corresponding notion of truth contrary to the opinions of anti realists such as Putnam Dummett van Fraassen and others This second edition includes a new Afterword by the author

The Quality of Thought David Pitt, 2024 The Quality of Thought develops and defends the thesis that thinking is a kind of experience characterized by a sui generis phenomenology and draws out the implications of this thesis for dominant views in philosophy of mind philosophy of language and metaphysics The view defended is radically internalist and intensionalist and goes against received doctrines in philosophy of mind externalism and language extensionalism The book offers arguments for the thesis refutations of classic externalism Putnam and Burge arguments that standard motivations for direct reference theories of names indexicals and demonstratives are not inevitable and alternative accounts of their and their conceptual equivalents semantics It also addresses outstanding challenges to the phenomenal intentionalist view of thought content including the existence of unconscious thought the elusiveness of conceptual phenomenology the matching content problem phenomenal compositionality and the determination of conceptual reference

The Mental Basis of Responsibility Walter Glannon, 2018-10-24 This title was first published in 2002 This book is an analysis of the ways in which mental states ground attributions of responsibility to persons Particular features of the book include attention to the agent's epistemic capacity for beliefs about the foreseeable consequences of actions and omissions attention to the essential role of emotions in prudential and moral reasoning a conception of personal identity that can justify holding persons responsible at later times for actions performed at earlier times an emphasis on neurobiology as the science that should inform our thinking about free will and responsibility and the melding of literature on free will and responsibility in contemporary analytic philosophy with legal cases abnormal psychology neurology and psychiatry which offers a richer texture to the general debate on the relevant issues

On Evidence in Philosophy William G. Lycan, 2019-01-24 In this book William G Lycan offers an epistemology of philosophy itself a partial method for philosophical inquiry The epistemology features three ultimate sources of justified philosophical belief First common sense in a carefully restricted sense of the term the sorts of contingent propositions Moore defended against idealists and skeptics Second the deliverances of well confirmed science Third and more fundamentally intuitions about cases in a carefully specified sense of that term The first half of *On Evidence in Philosophy* expounds a version of Moore's method and applies it to each of several issues This version is shown to resist all the standard objections to Moore most of them do not even apply It is argued in Chapters 5 and 6 that philosophical method is far less powerful than most have taken it to be In particular deductive argument can accomplish very little and hardly ever is an opposing position refuted except by common sense or by science The final two chapters defend the evidential status of intuitions and the Goodmanian method of reflective equilibrium it is argued that philosophy always and everywhere depends on them The method is then set within a more general explanatory coherentist epistemology which is shown to resist standard forms of skepticism In sum William G Lycan advocates a picture of philosophy as a very wide explanatory reflective equilibrium

incorporating common sense science and our firmest intuitions on any topic and nothing more not ever

Varieties of Tone R. Kortum, 2013-11-15 In clear and lively prose that avoids jargon the author carefully and systematically examines the many kinds of subtly nuanced words or word pairs of everyday discourse such as and but before ere Chinese Chink and sweat perspiration that have proven resistant to truth conditional explanations of meaning

Functions: selection and mechanisms Philippe Huneman, 2013-02-20 This volume handles in various perspectives the concept of function and the nature of functional explanations topics much discussed since two major and conflicting accounts have been raised by Larry Wright and Robert Cummins papers in the 1970s Here both Wright's etiological theory of functions and Cummins systemic conception of functions are refined and elaborated in the light of current scientific practice with papers showing how the etiological theory faces several objections and may in reply be revisited while its counterpart became ever more sophisticated as researchers discovered fresh applications for it Relying on a firm knowledge of the original positions and debates this volume presents cutting edge research evincing the complexities that today pertain in function theory in various sciences Alongside original papers from authors central to the controversy work by emerging researchers taking novel perspectives will add to the potential avenues to be followed in the future Not only does the book adopt no a priori assumptions about the scope of functional explanations it also incorporates material from several very different scientific domains e.g. neurosciences ecology or technology In general functions are implemented in mechanisms and functional explanations in biology have often an essential relation with natural selection These two basic claims set the stage for this book's coverage of investigations concerning both functional explanations and the metaphysics of functions It casts new light on these claims by testing them through their confrontation with scientific developments in biology psychology and recent developments concerning the metaphysics of realization Rather than debating a single theory of functions this book presents the richness of philosophical issues raised by functional discourse throughout the various sciences

Mental Causation and the Metaphysics of Mind Neil Campbell,2003-01-02 Since Descartes's division of the human subject into mental and physical components in the seventeenth century there has been a great deal of discussion about how indeed whether or not our mental states bring about our physical behavior Through historical and contemporary readings this collection explores this lively and important issue In four parts this anthology introduces the problem of mental causation explores the debate sparked by Donald Davidson's anomalous monism examines Frank Jackson's knowledge argument for the view that qualia are epiphenomenal and investigates attempts to employ the controversial concept of supervenience to explain mental causation

Organisms, Agency, and Evolution D. M. Walsh,2015-11-13 The central insight of Darwin's Origin of Species is that evolution is an ecological phenomenon arising from the activities of organisms in the struggle for life By contrast the Modern Synthesis theory of evolution which rose to prominence in the twentieth century presents evolution as a fundamentally molecular phenomenon occurring in populations of sub organismal entities genes After nearly a century of success the Modern Synthesis theory is now being challenged by empirical advances in the study of organismal development and inheritance In this important study D M Walsh shows that the principal defect of the Modern Synthesis resides in its rejection of Darwin's organismal perspective and argues for situated Darwinism an alternative organism centred conception of evolution that prioritises organisms as adaptive agents His book will be of interest to scholars and advanced students of evolutionary biology and the philosophy of biology

The Twin Earth Chronicles Andrew Pessin,Sanford Goldberg,2016-09-16 In 1975 Putnam published a paper called The Meaning of Meaning which challenged the orthodox view in the philosophies of language and mind The article's Twin Earth conclusions about meaning thought and
