

Comparison on four research philosophies in managemen t research

	Positivism	Realism	Interpretivism	Pragmatism
Ontology: the researcher's view of the nature of reality or being	External, objective and independent of social actions	Is objective. Exists independently of human thoughts and beliefs or knowledge of their existence (realist), but is interpreted through social conditioning (critical realist)	Socially constructed, subjective, may change, multiple	External, multiple, view chosen to best enable answering of research question
Epistemology: the researcher's view regarding what constitutes acceptable knowledge	Only observable phenomena can provide credible data, facts. Focus on causality and law like generalisations, reducing phenomena to simplest elements	Observable phenomena provide credible data, facts. Insufficient data means inaccuracies in sensations (direct realism). Alternatively phenomena create sensations which are open to misinterpretation (critical realism). Focus on explaining within a context or contexts	Subjective meanings and social phenomena. Focus upon the details of situation, a reality behind these details, subjective meanings motivating actions	Either or both observable phenomena and subjective meanings can provide acceptable knowledge dependent upon the research question. Focus on practical applied research, integrating different perspectives to help interpret the data
Axiology: the researcher's view of the role of values in research	Research is undertaken in a value-free way, the researcher is independent of the data and maintains an objective stance	Research is value laden; the researcher is biased by world views, cultural experiences and upbringing. These will impact on the research	Research is value bound, the researcher is part of what is being researched, cannot be separated and so will be subjective	Values play a large role in interpreting results, the researcher adopting both objective and subjective points of view
Data collection techniques most often used	Highly structured, large samples, measurement, quantitative, but can use qualitative	Methods chosen must fit the subject matter, quantitative or qualitative	Small samples, in-depth investigations, qualitative	Mixed or multiple method designs, quantitative and qualitative

Philosophies Of Science:

Philosophy of Science Philipp Frank, 2013-04-16 A distinguished mathematician traces the history of science illustrating philosophy's ongoing role explaining technology's erosion of the rapport between the two fields and offering suggestions for their reunion 1962 edition

Philosophies of the Sciences Fritz Allhoff, 2015-12-02 A collection of essays discussing a wide range of sciences and the central philosophical issues associated with them presenting the sciences collectively to encourage a greater understanding of their associative theoretical foundations as well as their relationships to each other Offers a new and unique approach to studying and comparing the philosophies of a variety of scientific disciplines Explores a wide variety of individual sciences including mathematics physics chemistry biology psychology sociology and economics The essays are written by leading scholars in a highly accessible style for the student audience Complements more traditional studies of philosophy of science

The Philosophies of Science Rom Harré, 1972 Harré shows how various views about the nature of science are related to the great historical schools of philosophy He sets out his argument in terms of concrete episodes in the history of science Harré also examines the theory that science is a form of art and looks at the way scientific knowledge affects our religious beliefs

The Philosophy of Science Richard Boyd, Philip Gasper, J. D. Trout, 1991 The more than forty readings in this anthology cover the most important developments of the past six decades charting the rise and decline of logical positivism and the gradual emergence of a new consensus concerning the major issues and theoretical options in the field As an introduction to the philosophy of science it stands out for its scope its coverage of both historical and contemporary developments and its detailed introductions to each area discussed

Philosophy of Science Marc Lange, 2006-11-28 *Philosophy of Science* An Anthology assembles some of the finest papers in the philosophy of science since 1945 showcasing enduring classics alongside important and innovative recent work Introductions by the editor highlight connections between selections and contextualize the articles Nine sections address topics at the heart of philosophy of science including realism and the character of scientific theories scientific explanations and laws of nature singular causation and the metaphysical implications of modern physics Provides an authoritative and accessible overview of the field

The Philosophies of Science Rom Harré, 1985

Philosophy of Science Geoffrey Gorham, 2012-12-01 So the world didn't end on 10 September 2008 but maybe it got you thinking The world didn't end on 10 September 2008 but the possibility may have got you thinking was it worth the risk What is the point of science actually Geoffrey Gorham considers these questions and explores the social and ethical implications of science by linking them to issues facing scientists today human extinction extraterrestrial intelligence space colonization and more

Readings in the Philosophy of Science Baruch A. Brody, Richard E. Grandy, 1989

Characterizing the Robustness of Science Léna Soler, Emiliano Trizio, Thomas Nickles, William Wimsatt, 2012-03-23 Mature sciences have been long been characterized in terms of the successfulness reliability or trustworthiness of their theoretical experimental or technical accomplishments Today many

philosophers of science talk of robustness often without specifying in a precise way the meaning of this term This lack of clarity is the cause of frequent misunderstandings since all these notions and that of robustness in particular are connected to fundamental issues which concern nothing less than the very nature of science and its specificity with respect to other human practices the nature of rationality and of scientific progress and science's claim to be a truth conducive activity This book offers for the first time a comprehensive analysis of the problem of robustness and in general that of the reliability of science based on several detailed case studies and on philosophical essays inspired by the so called practical turn in philosophy of science

The Meaning of Science Tim Lewens, 2016-01-26 A philosopher of science examines the biggest ethical and moral issues in science today and explains why they matter for all of us scientist and layman alike Science has produced explanations for everything from the mechanisms of insect navigation to the formation of black holes and the workings of black markets But how much can we trust science and can we actually know the world through it How does science work and how does it fail And how can the work of scientists help or hurt everyday people These are not questions that science can answer on its own This is where philosophy of science comes in Studying science without philosophy is to quote Einstein to be like somebody who has seen thousands of trees but has never seen a forest Cambridge philosopher Tim Lewens shows us the forest He walks us through the theories of seminal philosophers of science Karl Popper and Thomas Kuhn and considers what science is how far it can and should reach and how we can determine the nature of its truths and myths These philosophical issues have consequences that stretch far beyond the laboratory For instance What role should scientists have in policy discussions on environmental issues such as fracking What are the biases at play in the search for a biological function of the female orgasm If brain scans can be used to demonstrate that a decision was made several seconds before a person actually makes a conscious choice what does that tell us about the possibility of free will By examining science through this philosophical lens Lewens reveals what physics can teach us about reality what biology teaches us about human nature and what cognitive science teaches us about human freedom A masterful analysis of the biggest scientific and ethical issues of our age *The Meaning of Science* forces us to confront the practical personal and political purposes of science and why it matters to all of us

Philosophy of Science Arthur Coleman Danto, Sidney Morgenbesser, 1960 *Philosophy of Science* Yuri Balashov, 2002 This work is a comprehensive anthology that draws together leading philosophers writing on the major themes in the philosophy of science Alex Rosenberg and Yuri Balashov have chosen articles in chapters under the headings science and philosophy explanation causation and laws scientific theories and conceptual change scientific realism testing and confirmation of theories and science in context Each section is prefaced by an introductory essay by the editors which guides students gently into each topic The book includes articles by philosophers is accessible and user friendly and provides a broad ranging exploration of the subject drawing from classic and contemporary articles Ideal for any philosophy student this book should be of value for any philosophy of science course The readings are designed to complement Alex

Rosenberg's textbook *Philosophy of Science A Contemporary Introduction* Routledge 2000 **The Present Situation in the Philosophy of Science** Friedrich Stadler, 2010-05-19 This volume is a serious attempt to open up the subject of European philosophy of science to real thought and provide the structural basis for the interdisciplinary development of its specialist fields but also to provoke reflection on the idea of European philosophy of science This efforts should foster a contemporaneous reflection on what might be meant by philosophy of science in Europe and European philosophy of science and how in fact awareness of it could assist philosophers interpret and motivate their research through a stronger collective identity The overarching aim is to set the background for a collaborative project organising systematising and ultimately forging an identity for European philosophy of science by creating research structures and developing research networks across Europe to promote its development **Philosophy of Science: Key Concepts** Steven French, 2016-01-28 Science has made a huge impact on human society over hundred years but how does it work How do scientists do the things they do How do they come up with the theories How do they test them How do they use these theories to explain phenomena How do they draw conclusions from them about how the world might be Now updated this second edition of *Philosophy of Science Key Concepts* looks at each of these questions and more Taking in turn the fundamental theories processes and views lying at the heart of the philosophy of science this engaging introduction illuminates the scientific practice and provides a better appreciation of how science actually works It features Chapters on discovery evidence verification and falsification realism and objectivity Accessible overviews of work of key thinkers such as Galileo Einstein and Mullis A new chapter on explanation An extended range of easy to follow and contemporary examples to help explain more technical ideas Study exercises an annotated bibliography and suggestions of Where to Go Next Succinct and approachable *Philosophy of Science Key Concepts* outlines some of the most central and important scientific questions problems and arguments without assuming prior knowledge of philosophy This enjoyable introduction is the perfect starting point for anyone looking to understand how and why science has shaped and changed our view of the world *Philosophy of Science for Scientists* Lars-Göran Johansson, 2015-12-17 This textbook offers an introduction to the philosophy of science It helps undergraduate students from the natural the human and social sciences to gain an understanding of what science is how it has developed what its core traits are how to distinguish between science and pseudo science and to discover what a scientific attitude is It argues against the common assumption that there is fundamental difference between natural and human science with natural science being concerned with testing hypotheses and discovering natural laws and the aim of human and some social sciences being to understand the meanings of individual and social group actions Instead examines the similarities between the sciences and shows how the testing of hypotheses and doing interpretation hermeneutics are similar activities The book makes clear that lessons from natural scientists are relevant to students and scholars within the social and human sciences and vice versa It teaches its readers how to effectively demarcate between science and pseudo science and sets criteria for

true scientific thinking Divided into three parts the book first examines the question What is Science It describes the evolution of science defines knowledge and explains the use of and need for hypotheses and hypothesis testing The second half of part I deals with scientific data and observation qualitative data and methods and ends with a discussion of theories on the development of science Part II offers philosophical reflections on four of the most important concepts in science causes explanations laws and models Part III presents discussions on philosophy of mind the relation between mind and body value free and value related science and reflections on actual trends in science

An Introduction to the Philosophy of Science (Classic Reprint) Abram Cornelius Benjamin, 2017-07-24 Excerpt from An Introduction to the Philosophy of Science Recent years have witnessed the publication of a large number of monographs magazine articles and books whose subject matter has seemed to defy classification Though they have been written for the greater part by scientists they are not properly scientific They begin with science they talk about science and they end with science yet they do not conform at all to the tradition of scientific writings Were it not for the fact that they differ in important ways from the usual books on logic they might be placed in this class Yet they are not logical in the usual sense Their repeated reference to philosophical issues tempts one to classify them with this group yet the writings approach these problems in a new spirit and with a new method which seem quite foreign to the traditional philosophy About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Philosophy of Science Alex Rosenberg, 2005-09-20 Identifies the philosophical problems that science raises through an examination of questions about its nature methods and justification A valuable introduction for science and philosophy students alike

Consciousness as a Scientific Concept Elizabeth Irvine, 2012-10-13 The source of endless speculation and public curiosity our scientific quest for the origins of human consciousness has expanded along with the technical capabilities of science itself and remains one of the key topics able to fire public as much as academic interest Yet many problematic issues identified in this important new book remain unresolved Focusing on a series of methodological difficulties swirling around consciousness research the contributors to this volume suggest that consciousness is in fact not a wholly viable scientific concept Supporting this eliminativist stance are assessments of the current theories and methods of consciousness science in their own terms as well as applications of good scientific practice criteria from the philosophy of science For example the work identifies the central problem of the misuse of qualitative difference and dissociation paradigms often deployed to identify measures of consciousness It also examines the difficulties that attend the wide range of experimental protocols used to operationalise

consciousness and the implications this has on the findings of integrative approaches across behavioural and neurophysiological research The work also explores the significant mismatch between the common intuitions about the content of consciousness that motivate much of the current science and the actual properties of the neural processes underlying sensory and cognitive phenomena Even as it makes the negative eliminativist case the strong empirical grounding in this volume also allows positive characterisations to be made about the products of the current science of consciousness facilitating a re identification of target phenomena and valid research questions for the mind sciences

Philosophy in Science Michael Heller, 2011-03-19 The traditional topics of the philosophy of nature space time causality the structure of the universe are overwhelmingly present in our modern scientific theories This book traces the complex paths that discussion of these topics has followed from Plato and Aristotle through Descartes Leibniz Kant and other great thinkers right up to the relativistic cosmologies and the grand unified theories of contemporary science In the light of this historical development it becomes clear that modern science gives us not only a technological power over the world but also a deeper understanding of physical reality In this sense science could be regarded as an heir to the traditional philosophy of nature Moreover the reader will learn why science itself deserves to be the subject of philosophical reflection

Philosophies of Science Jennifer McErlean, 2000 Featuring excellent and accessible introductions for a broad range of readers this book reader provides a balance of both traditional material that is core to the subject and selections from other perspectives such as feminist post empiricist and social science
