Boden,1996 This new volume in the acclaimed Oxford Readings in Philosophy series offers a selection of the most important philosophical work being done in the new and fast growing interdisciplinary area of artificial life Artificial life research seeks to synthesize the characteristics of life by artificial means particularly employing computer technology The essays here explore such fascinating themes as the nature of life the relation between life and mind and the limits of technology *Genesis Redux* Jessica Riskin,2007 Since antiquity philosophers and engineers have tried to take life's measure by reproducing it Aiming to reenact Creation at least in part these experimenters have hoped to understand the links between body and spirit matter and mind mechanism and consciousness *Genesis Redux* examines moments from this centuries long experimental tradition efforts to simulate life in machinery to synthesize life out of material parts and to understand living beings by comparison with inanimate mechanisms Jessica Riskin collects seventeen essays from distinguished scholars in several fields These studies offer an unexpected and far reaching result attempts to create artificial life have rarely been driven by an impulse to reduce life and mind to machinery On the contrary designers of synthetic creatures have generally assumed a role for something nonmechanical The history of artificial life is thus also a history of theories of soul and intellect Taking a historical approach to a modern quandary *Genesis Redux* is essential reading for historians and philosophers of science and technology scientists and engineers working in artificial life and intelligence and anyone engaged in evaluating these world changing projects

**Technological Animation in Classical Antiquity** Tatiana Bur, Maria Gerolemou, Isabel Ruffell, 2024-09-24 The persistent desire to animate inanimate objects has been a recurring theme in European culture dating back to ancient Greek and Roman times Technological Animation in Classical Antiquity aims to establish for the first time the significance of this aspiration and its practical realization within Greek and Roman societies While certain aspects of this narrative have been explored previously this study shifts the focus to place technological animation at the forefront The sixteen chapters examine the tangible existence of such devices across various media and considers their roles in diverse contexts delving into the reciprocal relationship between technological and material realities and its influence on the concept of animation and vice versa By adopting this perspective technological animation not only provides a new understanding of the processes behind animation but also lends a fresh perspective to the animated artifact In contrast to other types of animation where the technologically animated artifact is often dismissed as a perceptual error induced for instance by rhetoric or magic this study separates technological animation from notions of rhetorical or magical skills theurgy or divine intervention Specifically it concentrates on a subset of artificial animation solely produced through technical procedures exploring how various motive forces actively contributed to giving objects agency and impacting their viewers illuminating how the material conditions of the artifacts themselves played a role in the process of technological animation whether through the distinctive materiality of bronze or the design of a statuette's hinge      **Emotions** Marion Ledwig, 2006 Original Scholarly Monograph      *Milestones in Analog and Digital Computing* Herbert Bruderer, 2021-01-04 This Third Edition is the first English language edition of the award winning Meilensteine der Rechentechnik illustrated in full color throughout in two volumes The Third Edition is devoted to both analog and digital computing devices as well as the world's most magnificent historical automatons and select scientific instruments employed in astronomy surveying time measurement etc It also features detailed instructions for

**Imaginary Futures** Richard Barbrook, 2007-04-20 This book is a history of the future It shows how our contemporary understanding of the Internet is shaped by visions of the future that were put together in the 1950s and 1960s At the height of the Cold War the Americans invented the only working model of communism in human history the Internet Yet for all of its libertarian potential the goal of this hi tech project was geopolitical dominance the ownership of time was control over the destiny of humanity The potentially subversive theory of cybernetics was transformed into the military friendly project of artificial intelligence Capitalist growth became the fastest route to the information society The rest of the world was expected to follow America's path into the networked future Today we're still being told that the Internet is creating the information society and that America today is everywhere else tomorrow Thankfully at the beginning of the twenty first century the DIY ethic of the Internet shows that people can resist these authoritarian prophecies by shaping information technologies in their own interest Ultimately if we don't want the future to be what it used to be we must invent our own improved and truly revolutionary future
