

How to Read Philosophy¹

(Warning: Do not use a highlighter when reading this. As you read on, you'll learn why.)

Introduction

Even if you are very smart and very literate, as I assume you are, confusion and frustration may occur if you do not read philosophy in the way philosophers expect you to. There is more than one way to read. In this handout, I describe the basics of How to Read Philosophy.

What to Expect

Reading philosophy is an activity and, like any activity (e.g., playing volleyball), it takes practice to become good at it. As with any attempt to learn a new skill, you will make some mistakes along the way, get frustrated with the fact that you are progressing more slowly than you would like, and need to ask for help. . . . It is likely that you will find unfamiliar vocabulary, abstract ideas, [and] complexly organized writing. . . . I mention this because it is normal to have certain reactions, such as confusion, courage, and frustration, when first encountering philosophy. Don't confuse these reactions with failure. Many students who have come before you have had the same initial reactions and succeeded, even your professor.

Basic Good Reading Behaviors

- Take care of yourself (take breaks, sit where you won't be distracted, give yourself enough time to read well, sit in an uncomfortable chair to avoid dozing off, etc.).
- Interact with the material (talk to your friends and classmates about what you have read. . . .)
- Keep reasonable expectations (you may not understand everything without some effort, you may need to ask for help or clarification).
- Be able to state the author's conclusion and the gist of the argument for that conclusion BEFORE you [read the relevant lecture.]
- Evaluate the gist of the author's argument BEFORE [you read the relevant lecture.]
- FLAG and TAKE NOTES. (Flagging is explained below.)

Heidegger Becoming Phenomenological Robert C. Scharff,2018-12-11 In this first book length study of the topic Robert C Scharff offers a detailed analysis of the young Heidegger s interpretation of Dilthey s hermeneutics of historical life and Husserl s transcendental phenomenology He argues that it is Heidegger s prior reading of Dilthey that grounds his critical appropriation of Husserl s phenomenology He shows that in Heidegger s early lecture courses a possible phenomenology is presented as a genuine alternative with the modern philosophies of consciousness to which Husserl s actual phenomenology is still too closely tied All of these philosophies tend to overestimate the degree to which we can achieve intellectual independence from our surroundings and inheritance In response Heidegger explains why becoming phenomenological is always a possibility but being a phenomenologist is not Scharff concludes that this discussion of the young Heidegger Husserl and Dilthey leads to the question of our own current need for a phenomenological philosophy that is for a philosophy that avoids technique happiness that at least sometimes thinks with a self awareness that takes no theoretical distance from life and that speaks in a language that is not yet selectively representational

education as well as a number of emerging studies examining the strategic challenges of developing UDL across institutions There is however still a relative paucity of research discussing the transformation of instruction or assessment in concrete terms Therefore there is a necessity for research and information on UDL that has already been implemented in classrooms and the practical examples of what this process of transformation looks like The Handbook of Research on Applying Universal Design for Learning Across Disciplines Concepts Case Studies and Practical Implementation offers practical examples of UDL having successfully been embedded in courses within various disciplines and classroom formats as well as across the undergraduate and graduate sectors The chapters provide case studies and concrete examples of what the UDL reflection on practice might look like in specific faculties and departments While highlighting UDL in areas such as educational technology student engagement assignment design and inclusive education this book is ideally intended for inservice and preservice teachers administrators teacher educators higher education professors and leaders practitioners researchers academicians and students interested in the integration of UDL into strategic academic plans *Engaging Undergraduates in Primary Source Research* Lijuan Xu,2021-09-07 Despite the plethora of primary sources that libraries have made available to their communities the published literature thus far is largely limited to the pedagogical significance of special collections and archives To leverage the wealth of primary sources and to explore the full potential of primary sources in the undergraduate classroom it is imperative that the conversation include faculty members as well as librarians outside special collections and archives The ten case studies included in Engaging Undergraduates in Primary Source Research represent the exciting work of faculty members and their librarian partners from various areas of library operations They offer examples strategies and innovative ways to incorporate a wide range of primary materials into undergraduates diet of secondary source research including both local archival and non archival materials as well as digital and physical materials and non English language materials Co authored by faculty and their librarian partners these case studies focus on how students develop and practice skills related to finding and identifying primary information analyzing and interrogating it confronting interpretations and constructing and presenting arguments using primary sources The emphasis on transferrable skills as well as the diversity of primary sources and teaching areas they represent makes it easy for anyone interested to find examples from which they can draw guidance and inspiration to form partnerships and to re invigorate students learning experiences involving primary sources Furthermore the collaborative process and the methods to engage students in primary source research that are highlighted in these stories are not unique to primary sources They can be easily applied in other collaborative teaching efforts involving different types of information to create skilled student researchers adept information producers and informed citizens **A Brief Guide to Writing from Readings** Stephen Wilhoit,2001 Teaches how to write common papers Argument coverage including Toulmin Argument Synthesis Rhetorical Analysis General Interest Writing
