Philosophy Of Language And The Challenge To Scientific Realism:

Philosophy of Language and the Challenge to Scientific Realism Christopher Norris, 2004-06-02 In this book Christopher Norris develops the case for scientific realism by tackling various adversary arguments from a range of anti realist positions Through a close critical reading he shows how they fail to make adequate sense on any rational consistent and scientifically informed survey of the evidence Along the way he incorporates a number of detailed case studies from the history and philosophy of science Norris devotes much of his discussion to some of the most prominent and widely influential source texts of anti realism Also included are the sophisticated versions of verificationism developed albeit in very different ways by thinkers such as Michael Dummett and Bas van Fraassen Central to Norris s argument is a prolonged engagement with the once highly influential but nowadays neglected work of Norwood Russell Hanson This book will be welcomed especially by readers who possess some knowledge of the background debate and who wish to deepen and extend their understanding of these issues beyond an introductory level

A Critical Introduction to Scientific Realism Paul Dicken, 2016-07-28 What are the reasons for believing scientific theories to be true The contemporary debate around scientific realism exposes questions about the very nature of scientific knowledge A Critical Introduction to Scientific Realism explores and advances the main topics of the debate allowing epistemologists to make new connections with the philosophy of science Moving from its origins in logical positivism to some of the most recent issues discussed in the literature this critical introduction covers the no miracles argument the pessimistic meta induction and structural realism Placing arguments in their historical context Paul Dicken approaches scientific realism debate as a particular instance of our more general epistemological investigations The recurrent theme is that the scientific realism debate is in fact a pseudo philosophical question Concerned with the methodology of the scientific realism debate Dicken asks what it means to offer an epistemological assessment of our scientific practices Taking those practices as a guide to our epistemological reflections A Critical Introduction to Scientific Realism fills a gap in current introductory texts and presents a

fresh approach to understanding a crucial debate **Badiou's 'Being and Event'** Christopher Norris,2009-05-24 Alain Badiou's *Being and Event* is the most original and significant work of French philosophy to have appeared in recent decades. It is the magnum opus of a thinker who is widely considered to have reshaped the character and set new terms for the future development of philosophy in France and elsewhere. This book has been written very much with a view to clarifying Badiou's complex and demanding work for non-specialist readers. It offers guidance on philosophical and intellectual context, key themes, reading the text, reception and influence, and further reading.

Derrida, Badiou and the Formal Imperative Christopher Norris,2012-08-02 In this path-breaking study Christopher Norris proposes a transformed understanding of the much exaggerated differences between analytic and continental philosophy. While keeping the analytic tradition squarely in view, his book focuses on the work of Jacques Derrida and Alain Badiou, two of the most original and significant figures in the recent history of ideas. Norris argues that these thinkers have decisively reconfigured the terrain of contemporary philosophy and between them pointed a way beyond some of those seemingly intractable issues that have polarised debate on both sides of the notional rift between the analytic and continental traditions. In particular, his book sets out to show against the received analytic wisdom that continental philosophy has its own analytic resources and is capable of bringing some much needed fresh insight to bear on problems in philosophy of language, logic and mathematics. Norris provides not only a unique comparative account of Derrida's and Badiou's work but also a remarkably wide-ranging assessment of their joint contribution to philosophy's current, if widely resisted, potential for self-transformation.

Re-Thinking the Cogito Christopher Norris,2010-08-12 *Re-Thinking the Cogito* seeks to combine a strongly naturalistic with a distinctively rationalist perspective on some nowadays much-discussed issues in philosophy of mind. Against the common view that they involve downright incompatible conceptions of mind, knowledge and ethics, it seeks to unite a naturalism that draws on recent advances in neurophysiology and cognitive science with an outlook that gives full weight to those normative values at the heart of rationalist thought. True to the book's constructive spirit, Norris offers various detailed proposals for bringing the two approaches into a mutually enhancing, though also mutually provocative, relationship. He finds that claim strikingly prefigured in Spinoza's working out of a non-reductive yet metaphysically uncompromising mind-body monism. Moreover, he suggests how a thoroughly naturalised approach might yet become a locus of productive engagement with the work of an ultra-rationalist thinker such as Alain Badiou. Thus Norris puts the case that physically embodied human thought has cognitive, intellectual and creative powers that cannot and need not be accounted for in terms of conscious let alone self-conscious reflection.

On Truth and Meaning Christopher Norris,2006-08-15 Examining key issues in the philosophy of logic, mind and language, this book proposes grounds for a different era of cooperation and mutual interrogative exchange between the two schools of thought. It explores both traditions alongside one another in order to point up certain contrasts or communities of interest.

A Realist Theory of Art History Ian Verstegen,2013-01-03 As the theoretical alignments within academia

shift this book introduces a surprising variety of realism to abolish the old positivist theory dichotomy that has haunted Art History Demanding frankly the referential detachment of the objects under study the book proposes a stratified multi causal account of art history that addresses postmodern concerns while saving it from its errors of self refutation Building from the very basic distinction between intransitive being and transitive knowing objects can be affirmed as real while our knowledge of them is held to be fallible Several focused chapters address basic problems while introducing philosophical reflection into art history These include basic ontological distinctions between society and culture general and special history the discontinuity of cultural objects the importance of definition for special history scales facets and fiat objects as forms of historical structure the nature of evidence and proof historical truth and controversies Stressing Critical Realism as the stratified multi causal approach needed for productive research today in the academy this book creates the subject of the ontology of art history and sets aside a theoretical space for metaphysical reflection thus clarifying the usually muddy distinction between theory methodology and historiography in art history

Spinoza Now Dimitris Vardoulakis, 2011 The interdisciplinary relevance of Spinoza today **Towards a New Scientific Realism** Jan Voosholz, 2025-08-30 This book presents an argument for a new type of scientific realism beyond naturalism correlationism and what the author terms objective realism To achieve this positive philosophical proposal Jan Voosholz develops a thorough critique of current debates surrounding realism and antirealism in philosophy of science as well as those concerning new and speculative realism Moreover in order to provide a new outlook for the philosophy of the natural sciences this book advances and introduces decisive arguments to that debate from speculative and new realist discussions in ontology and epistemology Consequently it develops a unique starting point for a pluralistic philosophy of nature Any proponent or adversary of new speculative perspectival or pragmatic realism ontic or epistemic structural realism scientific pluralism feminist or structural empiricism selective scepticism non reductive or reductive naturalism with an interest in general philosophy of science should take the careful reconstruction of the debates and the novel arguments presented in this book into account Readers interested in philosophy and the sciences with an interest in these areas of theoretical philosophy will find in this book an informative and comprehensive outline of the state of the art in the epistemology and ontology of the natural sciences

A Dictatorship of Relativism? Jeffrey M. Perl, 2007 In the last homily he gave before becoming Pope Benedict XVI Cardinal Joseph Ratzinger described modern life as ruled by a dictatorship of relativism which does not recognize anything as definitive and whose ultimate goal consists solely of satisfying the desires of one's own ego An eminent scholar familiar with the centuries old debates over relativism Ratzinger chose to oversimplify or even caricature a philosophical approach of great sophistication and antiquity His homily depicts the relativist as someone blown about by every wind of doctrine whereas the relativist sticks firmly to one argument that human knowledge is not absolute Gathering prominent intellectuals from disciplines most relevant to the controversy ethics theology political theory anthropology psychology cultural studies epistemology philosophy of science and classics this special double issue of Common Knowledge contests Ratzinger's denunciation of relativism One essay relates the arguments of Ratzinger to those of two other German scholars the conservative political theorist Ernst Wolfgang Bockenforde and the liberal philosopher and sociologist Jürgen Habermas since all three men assume that social order depends on the existence of doctrinal authority

divine or otherwise The contributors here argue for an intellectual and social life free of the desire for an infantilizing authority One proposes that the Christian god is a relativist who prefers limitation and ambiguity another initially in agreement with Ratzinger about the danger relativism poses to faith and morals then argues that this danger is what makes relativism valuable The issue closes with the first English translation of an extract from a book on Catholic Jewish relations by Cardinal Carlo Maria Martini one of the Catholic Church s most progressive figures Contributors David Bloor Daniel Boyarin Mary Baine Campbell Lorraine Daston Arnold I Davidson John Forrester Kenneth J Gergen Simon Goldhill Jeffrey F Hamburger Julia Kristeva Carlo Maria Cardinal Martini Christopher Norris Joseph Cardinal Ratzinger Richard Shusterman Barbara Herrnstein Smith Jeffrey Stout Gianni Vattimo *The Flight from Reality in the Human Sciences* Ian Shapiro, 2009-02-09 In this captivating yet troubling book Ian Shapiro offers a searing indictment of many influential practices in the social sciences and humanities today Perhaps best known for his critique of rational choice theory Shapiro expands his purview here In discipline after discipline he argues scholars have fallen prey to inward looking myopia that results from and perpetuates a flight from reality In the method driven academic culture we inhabit argues Shapiro researchers too often make display and refinement of their techniques the principal scholarly activity The result is that they lose sight of the objects of their study Pet theories and methodological blinders lead unwelcome facts to be ignored sometimes not even perceived The targets of Shapiro s critique include the law and economics movement overzealous formal and statistical modeling various reductive theories of human behavior misguided conceptual analysis in political theory and the Cambridge school of intellectual history As an alternative to all of these Shapiro makes a compelling case for problem driven social research rooted in a realist philosophy of science and an antireductionist view of social explanation In the lucid if biting prose for which Shapiro is renowned he explains why this requires greater critical attention to how problems are specified than is usually undertaken He illustrates what is at stake for the study of power democracy law and ideology as well as in normative debates over rights justice freedom virtue and community Shapiro answers many critics of his views along the way securing his position as one of the distinctive social and political theorists of our time
