Philosophy Of Science Part 1:

Global Epistemologies and Philosophies of Science David Ludwig, Inkeri Koskinen, Zinhle Mncube, Luana Poliseli, Luis Reyes-Galindo, 2021-07-29 In bringing together a global community of philosophers Global Epistemologies and Philosophies of Science develops novel perspectives on epistemology and philosophy of science by demonstrating how frameworks from academic philosophy e.g. standpoint theory, social epistemology, feminist philosophy of science and related fields e.g. decolonial studies, transdisciplinarity, global history of science can contribute to critical engagement with global dimensions of knowledge and science. Global challenges such as climate change, food production and infectious diseases raise complex questions about scientific knowledge production and its interactions with local knowledge systems and social realities. As academic philosophy provides relatively little reflection on global negotiations of knowledge, many pressing scientific and societal issues remain disconnected from core debates in epistemology and philosophy of science. This book is an invitation to broaden agendas of academic philosophy by presenting epistemology and philosophy of science as globally engaged fields that address heterogeneous forms of knowledge production and their interactions with local livelihoods, practices and worldviews. This integrative ambition makes the book equally relevant for philosophers and interdisciplinary scholars who are concerned with methodological and political challenges at the intersection of science and society.

Philosophies Of Science Jane Duran, 2018-02-20 This book presents the feminist critique of science and the philosophy of science in such a way that students of philosophy of science, philosophers, feminist theorists and scientists will find the material accessible and intellectually rigorous.

Feng Shui: Teaching About Science and Pseudoscience Michael R. Matthews, 2019-07-18 This book provides a richly documented account of the historical, cultural, philosophical and practical dimensions of feng shui. It argues that where feng shui is entrenched, educational systems have a responsibility to examine its claims and that this examination provides opportunities for students to better learn about the key features of the nature of science, the demarcation of science and non-science, the characteristics of pseudoscience and the engagement of science with culture and worldviews. The arguments presented for feng shui being a pseudoscience can be marshalled when considering a whole range of comparable beliefs and the educational benefit of their appraisal. Feng shui is a deeply entrenched three-millennia-old system of Asian beliefs and practices about nature, architecture, health and divination that has garnered a growing presence outside of Asia. It is part of a comprehensive and ancient worldview built around belief in chi, qi, the putative universal energy or life force that animates all existence: the cosmos, the solar system, the earth and human bodies. Harmonious living requires building in accord with local chi streams; good health requires replenishment and manipulation of internal chi flow; and a beneficent afterlife is enhanced when buried in conformity with chi directions. Traditional Chinese Medicine is based on the proper manipulation of internal chi by acupuncture, tai chi and qigong exercise.

Meta-Philosophical Reflection on Feminist Philosophies of Science Maria Cristina Amoretti, Nicla Vassallo, 2015-12-21 This volume offers a meta philosophical reflection on feminist philosophies of science It emphasizes and discusses both the connections and differences between traditional philosophies of science and feminist philosophies of science The collection systematically analyses feminist contributions to the various philosophies of specific sciences Each chapter is devoted to a specific area of philosophy of science general philosophy of science philosophy of biology philosophy of climate sciences philosophy of cognitive sciences and neurosciences philosophy of economics philosophy of history and archaeology philosophy of logic and mathematics philosophy of medicine philosophy of psychology philosophy of physics and philosophy of social sciences Since some of these areas have so far rarely been addressed by feminist philosophers this new collection provides new angles and stimulates the debate on pivotal issues that are part and parcel of both traditional philosophies of science and feminist philosophies of science Using a range of different methodologies and styles the essays all show great clarity in both arguments and contents

Modal Empiricism Quentin Ruyant, 2021-05-07 This book proposes a novel position in the debate on scientific realism Modal Empiricism Modal empiricism is the view that the aim of science is to provide theories that correctly delimit in a unified way the range of experiences that are naturally possible given our position in the world The view is associated with a pragmatic account of scientific representation and an original notion of situated modalities together with an inductive epistemology for modalities It purports to provide a faithful account of scientific practice and of its impressive achievements and defuses the main motivations for scientific realism More generally Modal Empiricism purports to be the precise articulation of a pragmatist stance towards science This book is of interest to any philosopher involved in the debate on scientific realism or interested in how to properly understand the content aim and achievements of science

A Conceptual-analytic Study of Classical Indian Philosophy of Morals Rajendra Prasad, 2008 Using reconstructive ideas available in classical Indian original works this book makes a departure in the style of modern writings on Indian moral philosophy It presents Indian ethics in an objective secular and wherever necessary critical manner as a systematic down to earth philosophical account of moral values virtues rights and obligations It thereby refutes

the claim that Indian philosophy has no ethics as well as the counter claim that it transcends ethics It demonstrates that moral living proves that the individual his society and the world are really real and not only taken to be real for behavioral purposes as the Advaitins hold the self is amoral being a non agent moksa is not a moral value and the Karmic theory because of involving belief in rebirth does not fuarantee that the doer of an action is also the experienter of its results contrary to what is commonly held and Indian ethics can sustain itself even if such notions are dropped Rajendra Prasad calls Indian ethics organismic because along with ethical concerns it also covers issues related to professions politics administration sex environment etc Therefore in one format it is theoretical and applied normative and metaethical humanistic and non humanistic etc of course within the limits of the then cognitive enquiry Weighing Interpretations in Science, Biblical Studies, and Life Matthew B. Joss,2023-06-05 Conflicting narratives beat upon us everywhere in politics religion and even science One person s conspiracy theory seems to be another s self evident truth But how are we to decide what makes one interpretation of the world better than another Weighing Interpretations in Science Biblical Studies and Life The Quest for the Best Explanation argues that theories and interpretations are trying to explain the world and hence the better theory is the one that better explains the data of the world But this raises questions What is an explanation How are we to rank them What kind of inference allows us to find and reason about these explanations This book provides a full description of this Inference to Best Explanation IBE and shows how IBE is at work in science Biblical studies and even everyday life Matthew B Joss offers a new method of diagramming and weighing explanatory arguments for competing interpretations In particular the book focuses on Biblical studies showing how this method can help in assessing and dialoging about interpretations walking through case studies in detail Finally the book concludes by gesturing towards some theological implications of IBE Namely IBE lends itself to a bottom up way of theologizing that is consistent with core Christian doctrines **The Socio-Ethical Dimension of Knowledge** Christian Damböck,Adam Tamas Tuboly,2022-01-01 This book studies how the relationship between philosophy morality politics and science was conceived in the Vienna Circle and how this group of philosophers tried to position science as an antidote to totalitarianism and irrationalism This leads to investigation of the still understudied views of the Vienna Circle on moral philosophy meta ethics and the relationship between philosophy of science and politics Including papers from an international group of scholars The Socio ethical Dimension of Knowledge The Mission of Logical Empiricism addresses these topics and makes them available to scholars in the field of history of philosophy of science Contemporary Natural Philosophy and Philosophies - Part 1 Gordana Dodig-Crnkovic,Marcin J. Schroeder,2019-06-11 Modern information communication technology eradicates barriers of geographic distances making the world globally interdependent but this spatial globalization has not eliminated cultural fragmentation The Two Cultures of C P Snow that of science technology and that of humanities are drifting apart even faster than before and they themselves crumble into increasingly specialized domains Disintegrated knowledge has become

subservient to the competition in technological and economic race leading in the direction chosen not by the reason intellect and shared value based judgement but rather by the whims of autocratic leaders or fashion controlled by marketers for the purposes of political or economic dominance If we want to restore the authority of our best available knowledge and democratic values in guiding humanity first we have to reintegrate scattered domains of human knowledge and values and offer an evolving and diverse vision of common reality unified by sound methodology This collection of articles responds to the call from the journal *Philosophies* to build a new networked world of knowledge with domain specialists from different disciplines interacting and connecting with other knowledge and values producing and knowledge and values consuming communities in an inclusive extended contemporary natural philosophic manner In this process of synthesis scientific and philosophical investigations enrich each other with sciences informing philosophies about the best current knowledge of the world both natural and human made while philosophies scrutinize the ontological epistemological and methodological foundations of sciences providing scientists with questions and conceptual analyses This is all directed at extending and deepening our existing comprehension of the world including ourselves both as humans and as societies and humankind

Inference and Representation Mauricio Suárez, 2024-01-11 The first comprehensive defense of an inferential conception of scientific representation with applications to art and epistemology Mauricio Suárez develops a conception of representation that delivers a compelling account of modeling practice He begins by discussing the history and methodology of model building charting the emergence of what he calls the modeling attitude a nineteenth century and fin de siècle development Prominent cases of models both historical and contemporary are used as benchmarks for the accounts of representation considered throughout the book After arguing against reductive naturalist theories of scientific representation Suárez sets out his own account a case for pluralism regarding the means of representation and minimalism regarding its constituents He shows that scientists employ a variety of modeling relations in their representational practice which helps them to assess the accuracy of their representations while demonstrating that there is nothing metaphysically deep about the constituent relation that encompasses all these diverse means The book also probes the broad implications of Suárez's inferential conception outside scientific modeling itself covering analogies with debates about artistic representation and philosophical thought over the past several decades

The Concept of Scientific Law in the Philosophy of Science and Epistemology Igor Hanzel,2013-03-14 The author argues that a reconstruction of scientific laws should give an account of laws relating phenomena to underlying mechanisms generating them as well as of laws relating this mechanism to its inherent capacities While contemporary philosophy of science deals only with the former the author provides the concept for the reconstruction of scientific laws where the knowledge of the phenomena enables one to grasp the quantity of their cause He then provides the concepts for scientific laws dealing with the relation of the quantity and quality of the cause underlying phenomena to the quality and quantity of its capacities Finally he provides concepts for scientific laws expressing how a certain cause due to the quantity and quality of its capacities generates the quantitative and qualitative determinations of its manifestations The book is intended for philosophers of science and philosophers of social science as well as for natural and social scientists

Science Teaching Michael R. Matthews,2015-12-22 Science Teaching argues that science teaching and science teacher education can be improved if teachers know something of the history and philosophy of science and if these topics are included in the science curriculum The history and philosophy of science have important roles in many of the theoretical issues that science educators need to address what constitutes an appropriate science curriculum for all students how science should be taught in traditional cultures how scientific literacy can be promoted and the conflict which can occur between science curriculum and deep seated religious or cultural values and knowledge Outlining the history of liberal approaches to the teaching of science Michael Matthews elaborates contemporary curriculum developments that explicitly address questions about the nature and the history of science He provides examples of classroom teaching and develops useful arguments on constructivism multicultural science education and teacher education
