Kurtines, Margarita Azmitia, Jacob L. Gewirtz, 1992-11-11 Focuses on the impact of values on psychology and human development as well as on science in general Explains how so called facts are shaded by the unstated values behind the interpretation of findings how values affect research questions and methods and how they frequently determine the form

of theoretical models and constructs

The Philosophy of Science: A-M Sahotra Sarkar, Jessica Pfeifer, 2006 The first in depth reference to the field that combines scientific knowledge with philosophical inquiry this encyclopedia brings together a team of leading scholars to provide nearly 150 entries on the essential concepts in the philosophy of science The areas covered include biology chemistry epistemology and metaphysics physics psychology and mind the social sciences and key figures in the combined studies of science and philosophy Midwest

Columbia Companion to Twentieth-century Philosophies Constantin V. Boundas, 2007 Columbia Companion to Twentieth Century Philosophies is the first guide to cover both the Anglo American analytic and European Continental traditions The first section features Nicholas Rescher writing on neoidealism Josephine Donovan commenting on feminist philosophy Tyler Burge discussing the philosophy of language and mind and Robert Hanna reflecting on Kant's legacy The second section presents Jean Grondin on hermeneutics Leonard Lawlor on phenomenology Charles Scott on postmodernism and Babette Babich on the philosophy of science The volume also covers logical positivism naturalism pragmatism aesthetics existentialism Marxism the Frankfurt School structuralism psychoanalysis political philosophy ethics and the philosophy of religion The final section addresses concurrent trends in Indian Chinese Japanese and African philosophy and a comprehensive introduction by Constantin V Boundas not only provides a thorough outline of the problems and issues of the analytic and Continental traditions but also boldly challenges the conviction that the two approaches must be rivals Offering an unusually panoramic perspective the Columbia Companion to Twentieth Century Philosophies enables readers to encounter foundational materials on their own terms

Ideas for a Hermeneutic Phenomenology of the Natural Sciences Joseph J. Kockelmans, 1993-07-31 I have always had a great interest in the philosophy of science At first this interest led to reflections on the mathematical sciences I later my focus shifted to the natural sciences 2 during the past twenty years or so my interest has also included the behavioral social and historical sciences From the very start my interest was always combined with a concern for the history of the sciences In philosophy of science proper my main interest was not in logical methodological or even epistemological issues although I obviously studied and taught the most important insights proposed in the leading publications in this large field of study My concern has always been predominantly ontological and in that area I have approached the relevant issues from a 4 phenomenological perspective For what follows it is perhaps of some importance to mention here that I came to phenomenology in a rather indirect way through the philosophy of Nicolai Hartmann Yet it was mainly the influence of Herman Van Breda and Alphonse De Waelhens which led me directly to Husserl's phenomenology At first I focused almost exclusively on Husserl's phenomenology Later I moved in the direction of the philosophy of Merleau Ponty and 1 Cf Joseph J Kockelmans Philosophy of Mathematics in the Middle Ages in Dutch Langemark Vonksteen 1953 On the Mode of Being of Mathematical Entities in Dutch in Tijdschrift voor Philosophie 16 1954 pp 289 331 2 Joseph J Kockelmans On Time and Space

The Humanistic Background of Science Philipp Frank, 2021-10-01 Philipp Frank 1884 1966 was an influential philosopher of science public

intellectual and Harvard educator whose last book *The Humanistic Background of Science* is finally available. Never published in his lifetime, this original manuscript has been edited and introduced to highlight Frank's remarkable but little known insights about the nature of modern science, insights that rival those of Karl Popper and Frank's colleagues Thomas Kuhn and James Bryant Conant. As a leading exponent of logical empiricism and a member of the famous Vienna Circle, Frank intended his book to provide an accessible, engaging introduction to the philosophy of science and its cultural significance. The book is steadfastly true to science, to aspirations of peace, unity, and human flourishing after World War II, and to the pragmatic philosophies of Charles S. Peirce, William James, and John Dewey that Frank embraced in his new American home. Amidst the many recent surveys and retrospective analyses of midcentury philosophy of science, *The Humanistic Background of Science* offers an original, first-hand view of Frank's post-European life and of intellectual dramas then unfolding in Chicago, New York City, and Boston. **Hermeneutic Philosophies of Social Science** Babette Babich, 2017-10-23

Hermeneutic philosophies of social science offer an approach to the philosophy of social science foregrounding the human subject and including attention to history as well as a methodological reflection on the notion of reflection, including the intrusions of distortions and prejudice. Hermeneutic philosophies of social science offer an explicit orientation to and concern with the subject of the human and social sciences. Hermeneutic philosophies of the social science represented in the present collection of essays draw inspiration from Gadamer's work as well as from Paul Ricoeur, in addition to Michel de Certeau and Michel Foucault, among others. Special attention is given to Wilhelm Dilthey, in addition to the broader phenomenological traditions of Edmund Husserl and Martin Heidegger, as well as the history of philosophy in Plato and Descartes. The volume is indispensable reading for students and scholars interested in epistemology, philosophy of science, social studies of knowledge, as well as social studies of technology. **Towards a Philosophy of Cosmic Life** David Bartosch, Attila Grandpierre, Bei Peng, 2023-08-22 Just as the six branches of a snow crystal converge in regular proportions toward their common center, the six contributions to this book point toward a future philosophy of cosmic life. In this sense, this edited volume represents a multidisciplinary and transcultural polylogue of distinguished authors from three continents which aims to establish highly innovative perspectives and open new frontiers of developing philosophical reflections and scientific foundations for the emergence of a common cosmic consciousness for an integral ecology and for a cooperative planetary civilization of humanity. John B. Cobb Jr. uses a process philosophical foundation to describe life as living events expressing novelty and the cosmos as a process of self-enriching and self-evolving. Life Itself Chandra Wickramasinghe unfolds his scientific and philosophical perspective on cosmic life in twelve successive steps, offering a wide range of arguments and insights that support an up-to-date theory of panspermia. Attila Grandpierre presents the Cosmic Life Principle and the comprehensive science based upon it that is inextricably linked to the healthy and cooperative civilization, to the biological laws of nature, to the laws of logic, to the uplifting of the well-being of people and ecological communities. Chunyou Yan

introduces the approach of his holographic philosophy according to which the universe must be understood as a vast living entity every aspect of which represents life Bei Peng shows that the proportions of energy meridians in traditional Chinese medicine correspond to musical intervals and on this basis she demonstrates the analogy of the human body to macrocosmic phenomena David Bartosch offers an examination of three important systematic foundations for a poly contextual transcultural philosophy of cosmic life with roots in Greek Chinese South and West Asian and European traditions of thought

Data and Evidence in Linguistics András Kertész,Csilla Rákosi,2012-02-09 The question of what types of data and evidence can be used is one of the most important topics in linguistics This book is the first to comprehensively present the methodological problems associated with linguistic data and evidence Its originality is twofold First the authors approach accounts for a series of unexplained characteristics of linguistic theorising the uncertainty and diversity of data the role of evidence in the evaluation of hypotheses the problem solving strategies as well as the emergence and resolution of inconsistencies Second the findings are obtained by the application of a new model of plausible argumentation which is also of relevance from a general argumentation theoretical point of view All concepts and theses are systematically introduced and illustrated by a number of examples from different linguistic theories and a detailed case study section shows how the proposed model can be applied to specific linguistic problems
