Variation and Gradience in Phonetics and Phonology Frank Kügler, Caroline Féry, Ruben Vijver, 2009-08-17 This book provides an overview of current issues in variation and gradience in phonetics phonology and sociolinguistics It contributes to the growing interest in gradience and variation in theoretical phonology by combining research on the factors underlying variability and systematic quantitative results with theoretical phonological considerations Variation is inherent to language and one of the aims of phonological theory is to describe and explain the mechanisms underlying variation at every level of phonological representation Variation below the segment concerns articulatory acoustic and perceptual cues that contribute to the formation of natural classes of sounds At the segmental level there are grammatical differences in the production and perception of contextual variation of segments and in the syntagmatic constraints on the combination of segments At the suprasegmental level the mapping of tones to grammatical functions and vice versa is discussed Further aspects addressed in this book are factors outside of language Variation that arises as a result of a particular dialect or of belonging to a certain age group or variation that is the consequence of language change

Gradience and variation have always been a central issue in phonetic and sociolinguistic research. Gradience introduces variation in phonology as well. If a phonetic entity can be pronounced in different ways depending on the environment, prosodic factors or dialectal influences, this gradience may introduce variation which we understand as a stable state of grammar.

Language Variation in European Perspectives Frans L. Hinskens, 2006-11-30

This volume presents 16 original studies of variation in languages representing the three main European language families as well as in varieties of Greek and Hungarian. The studies concern variation in or across dialects or dialect groups in standard varieties or in emerging regional varieties of the standard. Several studies investigate a specific linguistic element or structure while others focus on areas of tension between variation and prescriptive standard norms on regional standard varieties and regiolects on problems of linguistic classification from folk linguistic or dialect geographical perspectives and the classification of speakers. Language acquisition plays a main role in three studies. The studies in this volume represent a range of methods including ethnographic and interpretative approaches, conversation analysis, analyses of the internal and geographical distribution of dialect features, the classification and quantitative analyses of socio-demographic speaker background data, quantitative analyses of both diachronic and synchronic language data, phonetic measurements as well as quasi-experimental perception studies. The

volume thus offers a microcosmic reflection of the macrocosmos of world wide research on variability in originally European languages at the beginning of the 21th century and the linguistic expression of cultural diversity
