unavailable to instruments knowledge gained from the experience of listening to it in a phonetically informed manner The author grounds this claim in the philosophy of phenomenism countering arguments against auditory transcription that have been advanced by experimental phoneticians for reasons of empirical inadequacy and by linguistic rationalists who say it is irrelevant for understanding the supposedly innate categories that are said to underlie speech A glossary of terms is included along with a series of examples to demonstrate the comparison classification and interpretation of phonetic transcriptions for different purposes

Syllable and Word Languages Javier Caro Reina, Renata Szczepaniak, 2014-10-24 This is the first volume concerned with the phonological typology of syllable and word languages based on the model of a complex multi layered and hierarchically structured phonological system The main typological claim is that the phonetic and phonological make up of a language depends on the relevance of the prosodic categories In previous research the syllable and the phonological word have already proved to be typologically important The contributions in this volume discuss theoretical questions and address issues such as the variable structure of the phonological word the interplay between phonetics and phonology as well as the effect of a language s phonological make up on its morphology or lexicon The volume provides detailed synchronic and diachronic analyses of Non Indo European languages which will serve as a basis for further typological research
