Photoelectric Astronomy for Amateurs Frank Bradshaw Wood, 1963 Photoelectric Astronomy for Amateurs. Edited by F.B. Wood Frank Bradshaw WOOD, 1963 Astronomical Photometry C. Sterken, J. Manfroid, 1992-04-30 Small and large telescopes are being installed all around the world Astronomers have thus acquired better access to more modern equipment not in the least to photometers which are very important tools for the contemporary observer This development of higher quality and more sensitive equipment makes it very necessary to improve the accuracy of the measurements This guide helps the astronomer and astronomy student to improve the quality of their photometric measurements and to extract a maximum of information from their observations The book is based on the authors observing experience spending numerous nights behind various instruments at many different observatories **International Halley Watch Amateur Observers' Manual for Scientific Comet Studies** Stephen J. Edberg, 1983 The Planet Observer's Handbook Fred W. Price, 2000-10-26 This is an informative up to date and well illustrated guide to planetary observations for amateurs After a brief description of the solar system and a chapter on the celestial sphere readers are shown how to choose test and use a telescope with various accessories and how to make observations and record results For each planet and the asteroids details are given of observational techniques together with suggestions for how to make contributions of scientific value From a general description and detailed observational history of each planet observers can anticipate what they should see and assess their own observations The chapter on planetary photography includes the revolutionary use of videography charge coupled devices and video assisted drawing There are also chapters on making maps and planispheres and on photoelectric photometry Manual for Astronomical Photoelectric Photometry American Association of Variable Star Observers. Extended Atmospheres and Circumstellar Matter in Spectroscopic Binary Systems A.H. Batten, 2012-12-06 The proposal to organize a Symposium on circumstellar matter and extended atmospheres in binary systems was first made by the Dominion Astrophysical Observatory to the Executive Committee of the International Astronomical Union in the summer of 1969 It received the support of the presidents of Commissions 29 Stellar Spectra 30 Radial Velocities 36 Stellar Atmospheres and 42 Photometric Double Stars Approval in principle was given by the Executive Committee almost immediately and the Committee further suggested that the Symposium be officially designated the Struve Memorial Symposium Final approval was given at the time of the 1970 General Assembly of the Union when the dates of the Symposium were set for August or September 1972 The Organizing Committee set up consisted of K O Wright Chairman A H Batten K H B6hm A A Boyarchuk G Larsson Leander and M Plavec In addition J Sahade and F B Wood acted as advisory members Local organization was entrusted to a committee consisting of A H Batten E K Lee and C D Scarfe The final dates selected were September 6 12 1972 and the Symposium was held at the Island Hall Hotel Parksville B C on Vancouver Island

some 90 miles from Victoria The Organizing Committee attempted to arrange a Symposium of the type in which no contributed papers would be presented and discussion would range as widely as possible over the field covered by the six invited review papers

The Observational Amateur Astronomer Patrick Moore, 2012-12-06 Patrick Moore has pulled together a group of professional and amateur astronomers each an expert in a particular field to describe how to observe every category of object that is within reach of an astronomical telescope of modest size Each chapter deals with a different class of object covering the whole range of possibilities from the Moon planets and stars to more specialised observations of comets novae and meteors If you own or are thinking of buying an astronomical telescope here is the book that will help you get the most enjoyment out of it It also explains how best to use your telescope for proper scientific observations for astronomy is one of the few remaining areas of science where a lot of useful work can be carried out by non professionals A companion book *The Modern Amateur Astronomer* deals with the non observational aspects of astronomy from buying a telescope or making your own through electronic equipment and accessories to more technical aspects such as spectroscopy and astrophotography

Observing Comets, Asteroids, Meteors, and the Zodiacal Light Stephen J. Edberg, David H. Levy, 1994-10-06 When can you see fireballs and who should you contact if you spot one When is it best to hunt for comets and meteors and whereabouts How do you gauge the size of the coma in the head of a comet and estimate its degree of condensation Clear and easy to use this guide shows you how to make successful and valuable observations and records of comets asteroids meteors and the zodiacal light For each topic the historical background and current scientific understanding support a wealth of observational techniques Comet observers are shown techniques for search and discovery They can learn how to make visual estimates of brightness and size and how to make photographic studies of cometary heads and tails Asteroid hunters will find a life list of quarry and guidelines on how to search for these objects and then how to photograph or electronically image them Fruitful photographic and electronic methods for studying meteors and meteor showers are provided Visual and photographic techniques show you how to examine the often elusive zodiacal light The more adventurous are provided with advanced techniques on how to make successful astrometric spectroscopic and electronic observations This is rounded off with an invaluable list of centres world wide to contact with your details of unusual sightings
