The Photographers' Book of Practical Formulae (Classic Reprint) W. D.

Holmes, 2015-08-04 Excerpt from The Photographers Book of Practical Formulae In all photographic manipulations it is first necessary to understand most thoroughly the systems of weights and measures at present in vogue More confusion has arisen from a lack of this knowledge perhaps than from anything else in the art of photography We are unluckily cursed with four different systems of weights Avoirdupois Troy Apothecaries and the Metric system and these are often used indiscriminately by authors and those who compound formulae and the formulae generally given forth without stating which set of weights is to be taken as the standard As a matter of course the metric system cannot be mistaken for any other so it is with the first three that we have to deal While in general practice the avoirdupois Troy and Apothecaries weights are nearly enough alike to cause no very serious error in compounding our chemicals still there can be no accurate results reached by those who are desirous of working by strictly correct weights and who have sufficient chemical acumen to analyze their work So far as we know the writers who specify what weight shall be employed can be counted on ten fingers The makers of dry plates are also at fault and we can call to mind but one or two instances where a definite statement is made by them About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
