Photography Beyond Technique: Essays from F295 on the Informed Use of Alternative and Historical Photographic Processes Tom Persinger, 2014-02-24 Photography is not dying and has not died It has been an ever changing medium since its earliest days and while near obsession with the technology of the day may have defined photography over the course of its existence photography is so much more than hardware and software Photography is communication whether chemical or digital tangible or ephemeral in form Photography Beyond Technique is a compelling selection of essays and images that reveal the thoughts and methods of some of today's most exciting contemporary photographers These artists employ alternative historical or handmade processes and techniques and they share a comprehensive view of the medium that the choice of photographic process is just as important as the selection of subjects While other books concentrate solely on process or theory or artistic intent none focus on photography in which these decisions are considered inseparable These 20 essays originally presented at the annual F295 symposium and seminar series provide a thought provoking read for anyone interested in photography as an art form and as a medium through which to view the world Includes Looking Backward Seeing Forward Reframing Visual History by Robert Hirsch Mystery Memory and Narrative by Martha Casanave Finding Confidence Combining Process with Purpose by Mark Osterman Photograph Material and Metaphor by Jerry Spagnoli **The Focal Press Companion to the Constructed Image in Contemporary**

Photography Marni Shindelman, Anne Massoni, 2018-09-03 This compendium examines the choices construction inclusions and exemptions and expanded practices involved in the process of creating a photograph Focusing on work created in the past twenty five years this volume is divided into sections that address a separate means of creating photographs as careful constructs Directing Spaces Constructing Places Performing Space Building Images and Camera less Images Introduced by both a curator and a scholar each section features contemporary artists in conversation with curators critics gallerists artists and art historians The writings include narratives by the artist writings on their work and examinations of studio practices This pioneering book is the first of its kind to explore this topic beyond those artists building sets to photograph The Materiality of Exhibition Photography in the Modernist Era Laurie Taylor, 2020-12-30 This book challenges the status quo of the materiality of exhibited photographs by considering examples from the early to mid twentieth century when photography's place in the museum was not only continually questioned but also continually redefined By taking this historical approach Laurie Taylor demonstrates the ways in which materiality as opposed to image was used to privilege the exhibited photograph as either an artwork or as non art information Consequently the exhibited photograph is revealed like its vernacular cousins to be a social object whose material form far from being supplemental is instead integral and essential to the generation of meaning The book will be of interest to scholars working in art history history of photography theory of photography curatorial studies and museum studies

curious about the science of photography and a first rate guide to the world of experimental photography for inquisitive photographers The Physics and Art of Photography, Volume 3 John Beaver, 2019-01-14 This book uses art photography as a point of departure for learning about physics while also using physics as a point of departure for asking fundamental questions about the nature of photography as an art Although not a how to manual the topics center around hands on applications sometimes illustrated by photographic processes that are inexpensive and easily accessible to students including a versatile new process developed by the author and first described in print in this series A central theme is the connection between the physical interaction of light and matter on the one hand and the artistry of the photographic processes and their results on the other This is the third volume in this three part series that uses art photography as a point of departure for learning about physics while also using physics as a point of departure for asking fundamental questions about the nature of photography as an art It focuses on the physics and chemistry of photographic light sensitive materials as well as the human retina It also considers the fundamental nature of digital photography and its relationship to the analog photography that preceded it Transformational Imagemaking: Handmade Photography Since 1960 Robert Hirsch, 2014-01-10 This groundbreaking survey of significant work and ideas focuses on imagemakers who have pushed beyond the boundaries of photography as a window on our material world Through interviews with more than 40 key artists this book explores a diverse group of curious experimentalists who have propelled the medium's evolution by visualizing their subject matter as it originates from their mind's eye Many favor the historical techniques commonly known as alternative photographic processes but all these makers demonstrate that the real alternative is found in their mental approach and not in their use of physical methods Within this context photographer and photography historian Robert Hirsch outlines the varied approaches these artists have utilized to question conventional photographic practices to convey internal realities and to examine what constitutes photographic reality Hirsch explores the half century evolution of these concepts and methodologies and their popularity among contemporary imagemakers who are merging digital and analog processes to express what was thought to be photographically inexpressible Read an interview with the author at Photo net <http://photo.net/learn/photographer-interviews/robert-hirsch> **The Critical Eye** Lyle Rexer, 2019-11-04 Based on the highly successful course at the School of Visual Arts developed by the author this book provides a comprehensive approach to the critical understanding of photography through an in depth discussion of fifteen photographs and their contexts historical generic biographical and aesthetic This book presents an intensive course in looking at photographs open to undergraduates and general audiences alike Rexer argues that by concentrating on fifteen carefully chosen works it is possible to understand the history development and contemporary situation of photography Looking to images by photographers such as Roland Fischer Nancy Rexroth and Ernest Cole The Critical Eye is the only book to address the totality of issues involved in photography from authorial self consciousness to the role of the audience Its subjects are not limited to art photography but include vernacular

interaction of light and matter on the one hand and the artistry of the photographic processes and their results on the other. Geometry and the Nature of Light focuses on the physics of light and the optics of lenses but also includes extended discussions of topics less commonly covered in a beginning text including symmetry in art and physics, different physical processes of the scattering of light, photograms, photographic shadow prints and the nature of shadows, elements of 2 dimensional design, pinhole photography and the view camera. Film in the Post-Media Age Ágnes Pethő, 2012-03-15. Ever since the centenary of cinema, there have been intense discussions in the field of film studies about the imminent demise of the cinematic medium. Endless articles championing the spirit of genuine cinephilia have proclaimed the death of classical cinema and mourned the end of an era, while new currents in media studies introduced such buzzwords into the discussions as remediation, Bolter and Grusin's media convergence, Jenkins' post media aesthetics, Manovich or the virtual life of film, Rodowick. By the turn of the millennium, the whole ecosystem of media had been radically altered through processes of hybridization and media convergence. Some theorists even claim that now that the term medium has triumphed in the discussions around contemporary art and culture, the actual media have already deceased as digitized imagery absorbs all media. Moving images have entered the art galleries and new forms of inter-art relationships have been forged. They have also moved into the streets and our everyday life as a domesticated medium, at everybody's reach, into new private and public environments and into a fusion of both via the Internet. Consequently, should we speak of an all-pervasive cinematic experience instead of a cinematic medium? What really happens to film once its traditional medium has shape-shifted into various digital forms and

once its traditional locations institutions and usages have been uprooted What do these re locations and re configurations really entail What are the most important new genres in post media moving pictures Is it the web video is it 3D cinema is it the computer game that operates with moving image narratives is it the new vernacular database the DVD or the good old television adjusted to all these new forms How does theatrical cinema itself adapt to or reflect on these new image forms and technologies How can we interpret the convergence of older cinematic forms with an emerging digital aesthetics traceable in typical post media hosts of moving images These are only some of the major questions that the theoretical investigation and in depth analyses in this volume try to answer in an attempt at exploring not the disappearance of cinema but the blooming post media life of film
