Nano-photonics for Advanced Networks Kiyoshi Asakawa, Yoshimasa Sugimoto, Shigeru Nakamura, 2025-07-14

This book encourages optoelectronic researchers and engineers to exploit innovative nano photonic applications in next generation information and communications systems. The authors discuss applications enabled by three forms of nano photonics: silicon photonics, photonic crystals and surface plasmons with a view to the development of the defining applications and technologies of tomorrow. They explain topics clearly for readers both new to the field and experts in photonics providing basic knowledge of the general structures, physics and characteristics of optoelectronic devices, advanced understanding of the specific structures, physics and characteristics of the latest nano scale optoelectronic and surface plasmonic devices and related technologies and an account of practical applications for each form of nano photonics among them: optical transception, LiDAR, optical neuro computing, optical random access memory and high power and narrow beam surface emitting lasers. The book is organised to treat the basics of each form of nano photonic device and then the applications. Specialist researchers, studying and practitioners employing nano photonics will find *Nano photonics for Advanced Networks* to be a useful means of keeping track of both the properties and applications of such devices. The book will also serve graduate students well as a comprehensive sourcebook for the subject.

Networking -- ICN 2005 Petre Dini,Pascal

Lorenz, 2005-03-31 The International Conference on Networking ICN 2005 was the fourth conference in its series aimed at stimulating technical exchange in the emerging and important field of networking. On behalf of the International Advisory Committee, it is our great pleasure to welcome you to the proceedings of the 2005 event. Networking faces dramatic changes due to the customer-centric view, the venue of the next generation networks paradigm, the push from ubiquitous networking and new service models. Despite legacy problems which researchers and industry are still discovering and improving, the state of the art the horizon has revealed new challenges that some of the authors tackled through their submissions. In fact, ICN 2005 was very well perceived by the international networking community. A total of 651 papers from more than 60 countries were submitted, from which 238 were accepted. Each paper was reviewed by several members of the Technical Program Committee. This year the Advisory Committee revalidated various accepted papers after the reviews had been incorporated. We perceived a significant improvement in the number of submissions and the quality of the submissions. The ICN 2005 program covered a variety of research topics that are of current interest, starting with Grid networks, multicasting, TCP optimizations, QoS and security, emergency services and network resiliency. The Program Committee selected also three tutorials and invited speakers that addressed the latest search results from the international industries and academia and reports on findings from mobile satellite and personal communications related to 3rd and 4th generation research projects and standardization.
