

THE COLD WAR

THE SPACE RACE

Alongside the rush to acquire nuclear weapons, the U.S. and the Soviet Union (U.S.S.R.) also engaged in a race to send man (and dog) into space for the first time.

1957 - The Soviets took an early lead in the space race and launched the first satellite in world history, named Sputnik I. Later, they sent a dog into space to test it out on living beings.

1968 - The Soviets scored again when they made world history by sending the first human to space in 1968. Cosmonaut Yuri Gagarin became a national hero in the U.S.S.R. and beyond.

1969 - The Americans stormed back and effectively "won" the space race by sending a manned spacecraft to the moon. In addition to dancing and playing golf on the moon, the U.S. planted a national flag for good measure.

1998 - Even though the Cold War officially ended in 1991, its legacy is still here. Were it not for the technological advancements of the space race, ideas like the International Space Station would not be able to be a reality.

The Space-Age Presidency of John F. Kennedy John Bisney, J. L. Pickering, 2019-03-15 In this engaging and inspiring work John Bisney and J L Pickering have written and illustrated a thorough history of John F Kennedy s role in developing the United States space program Ironically despite his close association with the race to space Kennedy initially thought the space program was too expensive and did not support a manned space flight until the Russians sent Yuri Gagarin into orbit just a few months after Kennedy s inauguration Now a century after Kennedy s birth the United States has reached the moon sent probes into deep space and had its astronauts spend extended time in space all of which are a legacy of Kennedy s presidency Surprising though there hasn t been a photographic history of Kennedy s involvement in the space race despite the visual glamour associated with the space race and Kennedy s presidency until this engaging book by two widely respected chroniclers of the race to space

Kersey,2024-07-16 If we want to decolonize the history of art argues Kristopher Kersey we must rethink our approach to the historical record This means dispensing with Eurocentric binaries divisions between Western and non Western modern and premodern and making a commitment to artworks that challenge the perspectives we build upon them In Facing Images the question takes elegant and intriguing form If the aesthetic hallmarks of modernity can be found in twelfth century art what does it really mean to be modern Kersey s answer to this question models a new historiography Facing Images begins by tracing the turbulent discourse surrounding the emergence of Japanese art history as a modern field In lieu of examining canonical works from the twelfth century Kersey foregrounds the elusive and the enigmatic in artworks little known and understudied outside Japan the manuscripts he selects defy traditional art historical narratives by exhibiting decidedly modern techniques including montage self reference reuse noise dissonance and chronological disarray Kersey weaves these medieval case studies together with insights from a wide range of interdisciplinary scholarship using a methodology that will prove important for historians Facing Images produces a history of non Western art in which diverse and anachronic works are brought responsibly and equitably into dialogue with the present without being subsumed under Eurocentric formalisms or false universals A timely intervention in the history of medieval Japanese art art historiography and the history of global modernism Facing Images redefines the relationship of the premodern non West to modern art It will be of particular interest

To Reach the High Frontier Roger D. Launius, Dennis R.

Jenkins, 2014-07-11 Access no single word better describes the primary concern of the exploration and development of space. Every participant in space activities—civil, military, scientific, or commercial—needs affordable, reliable, frequent, and flexible access to space. *To Reach the High Frontier* details the histories of the various space access vehicles developed in the United States since the birth of the space age in 1957. Each case study has been written by a specialist knowledgeable about the vehicle described and places each system in the larger context of the history of spaceflight. The technical challenge of reaching space with chemical rockets, the high costs associated with space launch, the long lead times necessary for scheduling flights, and the poor reliability of the rockets themselves show launch vehicles to be the space program's most difficult challenge.

For the Love of Mars Matthew Shindell, 2023-05-18 A tour of Mars in the human imagination from ancient astrologers to modern explorers. Mars and its secrets have fascinated and mystified humans since ancient times. Due to its vivid color and visibility, its geologic kinship with Earth, and its potential as our best hope for settlement, Mars embodies everything that inspires us about space and exploration. *For the Love of Mars* surveys the red planet's place in the human imagination, beginning with ancient astrologers and skywatchers and ending in our present moment of exploration and virtual engagement. National Air and Space Museum curator Matthew Shindell describes how historical figures across eras and around the world have made sense of this mysterious planet. We meet Mayan astrologer-priests who incorporated Mars into seasonal calendars and religious ceremonies; Babylonian astrologers who discerned bad omens; figures of the Scientific Revolution who struggled to comprehend it as a world; Victorian astronomers who sought signs of intelligent life; and twentieth and twenty-first century scientists who have established a technological presence on its surface. Along the way, we encounter writers and artists from each of these periods who take readers and viewers along on imagined journeys to Mars. By focusing on the diverse human stories behind the telescopes and behind the robots we know and love, Shindell shows how Mars exploration has evolved in ways that have also expanded knowledge about other facets of the universe. Captained by an engaging and erudite expert, *For the Love of Mars* is a captivating voyage through time and space for anyone curious about Curiosity and the red planet.
