For the Second Edition, this book has been expanded and extensively rewritten to keep pace with knowledge of physical agents in physical therapy. Major changes have been made in the sections on pain and on nerve and muscle stimulating currents. The chapters on other topics — the laser, ultrasound, infrared energy, ultraviolet light and ultrasonic energy, as well as the theoretical and practical aspects of instrumentation — also incorporate new, clinically useful material. Special care has been taken to provide in greater depth the concepts and documentation for new treatments and equipment. One facet of the text has not changed: our contribution in providing the reader with the information required to choose and use physical agents in an optimally effective manner.
