Physical And Chemical Weathering In Geochemical Cycles:

Physical and Chemical Weathering in Geochemical Cycles A. Lerman, M. Meybeck, 2012-12-06 Proceedings of the NATO Advanced Study Institute Aussois France September 4 15 1985 Clay Materials Used in Construction George M. Reeves, Ian Sims, J. C. Cripps, 2006 Concluding the trilogy on geological materials in construction this authoritative volume reviews many uses of clays ranging from simple fills to sophisticated products Comprehensive and international coverage is achieved by an expert team including geologists engineers and architects Packed with information prepared for a wide readership this unique handbook is also copiously illustrated The volume is dedicated to the memory of Professor Sir Alec Skempton Various definitions of clay are explored Clay mineralogy is described plus the geological formation of clay deposits and their fundamental materials properties World and British clay deposits are reviewed and explained New compositional data are provided for clay formations throughout the stratigraphic column Investigative techniques and interpretation are considered ranging from site exploration to laboratory assessment of composition and engineering performance Major civil engineering applications are addressed including earthworks earthmoving and specialized roles utilizing clays Traditional earthen building is included and shown to dominate construction in places Clay based construction materials are detailed including bricks ceramics and cements The volume also includes a comprehensive glossary *Encyclopedia of Geomorphology* Andrew Goudie, 2013-04-15 Volume editor is the leading authority in the field Alphabetically organized in two volumes c 700 comprehensively signed cross referenced and indexed entries Detailed bibliographies and suggestions for further reading follow most entries Fully illustrated over 300 plates and line drawings Written by an editorial team of over 270 experts from over thirty countries *Material Fluxes on the Surface of the Earth* National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Earth Sciences and Resources, 1994-02-01 Understanding the ebb and flow of materials on the earth's surface is vital to comprehending environmental change We need to differentiate between those that represent a progression of natural events from those that might be human induced The latter can be managed by changing policies the former probably cannot This volume presents what researchers know and do not know about the base or natural level of surficial fluxes and their dynamics Leading experts in the field offer a historical perspective on geofluxes and discuss the cycles of materials on the earth's surface from weathering processes to the movement of material through the river system and oceans to their deposition The committee sets research directions in five areas shallow water studies mapping rates of change sample dating and most critical understanding whether human influence can exceed the natural variability in geoflux processes This volume will be important reading for geophysical scientists researchers faculty and students as well as environmental policymakers

Interactions of C, N, P and S Biogeochemical Cycles and Global Change Roland Wollast, Fred T. Mackenzie, Lei Chou, 2013-06-29 This book is a natural extension of the SCOPE Scientific Committee of Problems on the Environment

volumes on the carbon C nitrogen N phosphorus P and sulfur S biogeochemical cycles and their interactions Likens 1981 Bolin and Cook 1983 Substantial progress in the knowledge of these cycles has been made since publication of those volumes In particular the nature and extent of biological and inorganic interactions between these cycles have been identified positive and negative feedbacks recognized and the relationship between the cycles and global environmental change preliminarily elucidated In March 1991 a NATO Advanced Research Workshop was held for one week in Melreux Belgium to reexamine the biogeochemical cycles of C N P and S on a variety of time and space scales from a holistic point of view This book is the result of that workshop The biogeochemical cycles of C N P and S are intimately tied to each other through biological productivity and subsequently to problems of global environmental change These problems may be the most challenging facing humanity in the 21 st century In the broadest sense global change encompasses both changes to the status of the large globally connected atmospheric oceanic and terrestrial environments e g tropospheric temperature increase and change occurring as the result of nearly simultaneous local changes in many regions of the world e g eutrophication

Tectonic Uplift and Climate Change William F. Ruddiman, 2013-11-11 A significant advance in climatological scholarship Tectonic Uplift and Climate Change is a multidisciplinary effort to summarize the current status of a new theory steadily gaining acceptance in geoscience circles that long term cooling and glaciation are controlled by plateau and mountain uplift Researchers in many diverse fields from geology to paleobotany present data that substantiate this hypothesis The volume covers most of the key dramatic transformations of the Earth's surface

Terrestrial Biospheric Carbon Fluxes Quantification of Sinks and Sources of CO₂ Joe Wisniewski, R. Neil Sampson, 2012-12-06 Towards the Balance and Management of the Carbon Budget of the Biosphere The current state of misunderstanding of the global C cycle and our failure to resolve an issue that has been debated for 100 years Jones and Henderson Sellers 1990 speaks loudly about the limitations of modern science when faced with the complexity of the biosphere Efforts to understand and balance the global C budget have gone through several phases First was a holistic view of the C budget as part of efforts to understand the geochemistry of the Earth e.g. Clarke 1908 Next came a period of data collection and synthesis which focused on the diversity of sectors of the biosphere This phase culminated in the early 1970s with the realization that humans were greatly impacting the global C cycle as measured at the Mauna Loa Observatory Keeling et al 1973 New syntheses of the global C budget emerged at this time Woodwell and Pacan 1973 Bolin et al 1979 The next phase was one of controversy and intense focus on particular sectors of the biosphere The controversy rested on discrepancies about the role of the terrestrial biota in the global C cycle and the failure to account for sufficient C sinks to absorb all the C emitted by land use change in the tropics Woodwell et al 1978 1983 Houghton et al 1983

The Silicon Cycle Venugopalan Ittekkot, Daniela Unger, Christoph Humborg, Nguyen Tac An, 2012-09-26 Silicon is among the most abundant elements on earth It plays a key but largely unappreciated role in many biogeochemical processes including those that regulate climate and undergird marine food webs The Silicon Cycle is the first book in more than 20 years to present a comprehensive overview of the silicon cycle and issues associated with it The book summarizes the major outcomes of the project Land Ocean Interactions Silica Cycle initiated by the Scientific Community on Problems of the Environment SCOPE of the International Council of Scientific Unions ICSU It tracks the pathway of silicon from land to sea and discusses its biotic and abiotic modifications in transit as well as its cycling in the coastal seas Natural geological processes in combination with atmospheric and hydrological processes are discussed as well as human perturbations of the natural controls of the silicon
