Sosa, 2015-01-29 The application and interpretation of statistics are central to ecological study and practice Ecologists are now asking more sophisticated questions than in the past These new questions together with the continued growth of computing power and the availability of new software have created a new generation of statistical techniques These have resulted in major recent developments in both our understanding and practice of ecological statistics This novel book synthesizes a number of these changes addressing key approaches and issues that tend to be overlooked in other books such as missing censored data correlation structure of data heterogeneous data and complex causal relationships These issues characterize a large proportion of ecological data but most ecologists training in traditional statistics simply does not provide them with adequate preparation to handle the associated challenges Uniquely *Ecological Statistics* highlights the underlying links among many statistical approaches that attempt to tackle these issues In particular it gives readers an introduction to approaches to inference likelihoods generalized linear mixed models spatially or phylogenetically structured data and data synthesis with a strong emphasis on conceptual understanding and subsequent application to data analysis Written by a team of practicing ecologists mathematical explanations have been kept to the minimum necessary This user friendly textbook will be suitable for graduate students researchers and practitioners in the fields of ecology evolution environmental studies and computational biology who are interested in updating their statistical tool kits A companion web site provides example data sets and commented code in the R language **Environmental and Ecological Statistics with R** Song S.

Ellison,2025-06-03 An accessible guide to understanding statistics using simulations with examples from a range of scientific disciplines Real world challenges such as small sample sizes skewed distributions of data biased sampling designs and more predictors than data points are pushing the limits of classical statistical analysis This textbook provides a new tool for the statistical toolkit data simulations It shows that using simulation and data generating models is an excellent way to validate statistical reasoning and to augment study design and statistical analysis with planning and visualization Although data

simulations are not new to professional statisticians Statistics by Simulation makes the approach accessible to a broader audience with examples from many fields It introduces the reasoning behind data simulation and then shows how to apply it in planning experiments or observational studies developing analytical workflows deploying model diagnostics and developing new indices and statistical methods Covers all steps of statistical practice from planning projects to post hoc analysis and model checking Provides examples from disciplines including sociology psychology ecology economics physics and medicine Includes R code for all examples with data and code freely available online Offers bullet point outlines and summaries of each chapter Minimizes the use of jargon and requires only basic statistical background and skills Medical Statistics from A to Z B. S. Everitt,2006-12-21 From Abcissa to Zygoty determination this accessible introduction to the terminology of medical statistics describes more than 1500 terms all clearly explained illustrated and defined in non technical language without any mathematical formulae With the majority of terms revised and updated and the addition of more than 100 brand new definitions this new edition will enable medical students to quickly grasp the meaning of any of the statistical terms they encounter when reading the medical literature Furthermore annotated comments are used judiciously to warn the unwary of some of the common pitfalls that accompany some cherished biomedical statistical techniques Wherever possible the definitions are supplemented with a reference to further reading where the reader may gain a deeper insight so whilst the definitions are easily digestible they also provide a stepping stone to a more sophisticated comprehension Statistical terminology can be quite bewildering for clinicians this guide will be a lifesaver A Field Guide to the Ants of New England Aaron M. research is becoming increasingly quantitative yet students often opt out of courses in mathematics and statistics unwittingly limiting their ability to carry out research in the future This textbook provides a practical introduction to quantitative ecology for students and practitioners who have realised that they need this opportunity The text is addressed to readers who haven't used mathematics since school who were perhaps more confused than enlightened by their undergraduate lectures in statistics and who have never used a computer for much more than word processing and data entry From this starting point it slowly but surely instils an understanding of mathematics statistics and programming sufficient for initiating research in ecology The book's practical value is enhanced by extensive use of biological examples and the computer language R for graphics programming and data analysis

Key Features Provides a complete introduction to mathematics statistics and computing for ecologists Presents a wealth of ecological examples demonstrating the applied relevance of abstract mathematical concepts showing how a little technique can go a long way in answering interesting ecological questions Covers elementary topics including the rules of algebra logarithms geometry calculus descriptive statistics probability hypothesis testing and linear regression Explores more advanced topics including fractals non linear dynamical systems likelihood and Bayesian estimation generalised linear mixed and additive models and multivariate statistics R boxes provide step by step recipes for implementing the graphical and numerical techniques outlined in each section

How to be a Quantitative Ecologist provides a comprehensive introduction to mathematics statistics and computing and is the ideal textbook for late undergraduate and postgraduate courses in environmental biology With a book like this there is no excuse for people to be afraid of maths and to be ignorant of what it can do

or not through time Part 3 Form and function Deals with the relationship of body form and life history patterns as they are related to ecological functions Part 4 Interactions among individuals and species Discusses the numerous interactions among individuals and species through communication competition predation mutualism and facilitation Part 5 Issues in conservation Focuses on several primary conservation issues such as flow alterations and the increasing biotic homogenization of faunas

Fish and Diadromy in Europe (ecology, management, conservation) Sylvie Dufour, Etienne Prevost, Eric Rochard, Patrick Williot, 2008-08-24 Most of the diadromous fish of the world have decreased in distribution and abundance since the beginning of the twentieth century They are now threatened and important conservation issues arise The causes of these trends vary among species and basins but regional human impact damming pollution fisheries and global change climate are suspected to be responsible for these difficulties This book contains selected papers from an international symposium organised by the Diadfish network held in Bordeaux France in 2005 Readers will find up to date information on the ecology ecotoxicology and physiology of several diadromous species Atlantic salmon shads lampreys eels and this whole group in Europe Main impacts are also documented and analysed in case studies and solutions or remediation actions are presented

Ecology in Action Fred D. Singer, 2016-03-10 Taking a fresh approach to integrating key concepts and research processes this undergraduate textbook encourages students to develop an understanding of how ecologists raise and answer real world questions Four unique chapters describe the development and evolution of different research programs in each of ecology's core areas showing students that research is undertaken by real people who are profoundly influenced by their social and political environments Beginning with a case study to capture student interest each chapter emphasizes the linkage between observations ideas questions hypotheses predictions results and conclusions Discussion questions integrated within the text encourage active participation and a range of end of chapter questions reinforce knowledge and encourage application of analytical and critical thinking skills to real ecological questions Students are asked to analyze and interpret real data with support from online tutorials demonstrating the R programming language for statistical analysis
