Yearbook of European Environmental Law ,2007 Innovative Economic Policies for Climate Change Mitigation Valentino Piana,2009 Climate change mitigation is still possible if innovative economic policies are implemented such as those provided by this book a large array of proposals by 30 economists from developing and developed countries High and senior level policymakers and their staff will find fundamental outlines and insights for negotiating and laying down NAMAs Nationally Appropriate Mitigation Actions and Climate Action Plans at national sub national city and sectoral levels With more than 20 recipes this book is revolutionary because 1 it leads the reader from the context to the implementation details 2 it reverses classical textbook proportions of 90%% analysis and 10%% proposals in favor of 90%% proposals and 10%% analysis 3 it relates each policy to a number of co benefits to synergize climate mitigation

with employment competitiveness and happiness This second edition 2012 builds upon the experience gained in implementation worldwide *Climate Change Negotiations* Gunnar Sjöstedt, Ariel Macaspac Penetrante, 2013-04-12 As the Kyoto Protocol limps along without the participation of the US and Australia on going climate negotiations are plagued by competing national and business interests that are creating stumbling blocks to success *Climate Change Negotiations A Guide to Resolving Disputes and Facilitating Multilateral Cooperation* asks how these persistent obstacles can be down scaled approaching them from five professional perspectives a top policy maker a senior negotiator a leading scientist an international lawyer and a sociologist who is observing the process The authors identify the major problems including great power strategies the EU the US and Russia leadership the role of NGOs capacity and knowledge building airline industry emissions insurance and risk transfer instruments problems of cost benefit analysis the IPCC in the post Kyoto situation and verification and institutional design A new key concept is introduced strategic facilitation Strategic facilitation has a long time frame a forward looking orientation and aims to support the overall negotiation process rather than individual actors This book is aimed at academics university students and practitioners who are directly or indirectly engaged in the international climate negotiation as policy makers diplomats or experts *Climate Justice* Henry Shue, 2014 Climate change is the most difficult threat facing humanity this century and negotiations to reach international agreement have so far foundered on deep issues of justice Providing provocative and imaginative answers to key questions of justice informed by political insight and scientific understanding this book offers a new way forward *Reading Architecture with Freud and Lacan* Lorens Holm, 2022-09-30 *Reading Architecture with Freud and Lacan* Shadowing the Public Realm methodically outlines key concepts in psychoanalytic discourse by reading them against key modern and post modern architects It begins with what is arguably the central concept for each discipline by putting the unconscious in a dialectic relation to space Each subsequent chapter begins with a detail in architectural discourse a kind of provocation that anchors each excursion into the thought of Freud and Lacan The text is cyclical episodic and cloudlike rather than expository the intention is not simply to explain the concept of the unconscious but to different degrees perform it in the text The book offers powerful critiques of current planning practice which has no tools to address our attachment to places It concludes with powerful critiques of our incapacity to change the environmentally damaging ways we live our lives which is an effect of our incapacity to recognise the presence of the death drive in our nature The text is an extended thesis spanning the chapters that the field of the Other is the common grammar that organises subjects into civilisations which has consequences for how we treat the public realm in architecture politics and the city The field of the Other is a slightly different slice through the urban social world It shadows but does not correspond exactly to more familiar categories like private public inside outside figure ground or piazza boulevard *Reading Architecture with Freud and Lacan* will be an essential resource to anyone interested in how the environment we build is a reflection of our desire Psychoanalysis is one of the great humanist discourses of the 20th century

and this book will be a valuable reference to the humanist in architects planners and social scientists whether they are students professionals or amateurs It will appeal to historians of the 20th century and to psychoanalysts and architects who are interested in how their respective discourses interdigitate with each other and with other discourses **The Spirit of Sustainability** Willis Jenkins, Whitney Bauman, 2009-11-01 The Spirit of Sustainability helps readers navigate the moral worlds and ethical concepts and social and religious practices related to sustainability In collaboration with the Forum on Religion and Ecology an established network of leading scholars it explores a wide range of topics and perspectives from the promise and problems of approaching sustainability through global and indigenous religions to major theories in philosophy and environmental ethics and professional practices and social movements This volume presents the various goals of sustainability ecological integrity economic health human dignity fairness to the future and social justice and provides a framework for reasoning through many interrelated environmental challenges for both current and future generations

Harris, 2009-11-09 More than two decades of international negotiations have failed to stem emissions of greenhouse gases that are causing global warming and climate change This book identifies a way to escape this ongoing tragedy of the atmospheric commons It takes a fresh approach to the ethics and practice of international environmental justice and proposes fundamental adjustments to the climate change regime in the process drawing support from cosmopolitan ethics and global conceptions of justice The author argues for cosmopolitan diplomacy which sees people rather than states alone as the causes of climate change and the bearers of related rights duties and obligations *Ethical Values and the Integrity of the Climate Change Regime* Hugh Breakey, Vesselin Popovski, 2016-05-23 This book investigates the ethical values that inform the global carbon integrity system and reflects on alternative norms that could or should do so The global carbon integrity system comprises the emerging international architecture being built to respond to the climate change This architecture can be understood as an integrity system an inter-related set of institutions governance arrangements regulations and practices that work to ensure the system performs its role faithfully and effectively This volume investigates the ways ethical values impact on where and how the integrity system works where it fails and how it can be improved With a wide array of perspectives across many

disciplines including ethicists philosophers lawyers governance experts and political theorists the chapters seek to explore the positive values driving the global climate change processes to offer an understanding of the motivations justifying the creation of the regime and the way that social norms impact upon the operation of the integrity system The collection focuses on the nexus between ideal ethics and real world implementation through institutions and laws The book will be of interest to policy makers climate change experts carbon taxation regulators academics legal practitioners and researchers

Burgerparticipatie en energiebeleid voor een duurzame ontwikkeling Gunter Bombaerts,2007

Fairness in International Climate Change Law and Policy Friedrich Soltau,2009-09-14 This work analyses fairness dimensions of the climate regime A central issue in international law and policy is how countries of the world should allocate the burden of addressing global climate change With the link between

human activities and climate change clearly established and the first impacts of climate change being felt there is a renewed sense of urgency in addressing the problem On the basis of an overview of science and the development of the climate regime this book seeks to identify the elements of a working consensus on fairness principles that could be used to solve the seemingly intractable problem of assigning responsibility for combating climate change The book demonstrates how an analysis of fairness dimensions of climate change grounded in practical developments and illustrated with reference to the key issues can add value to our understanding of the options for international climate law and policy
