examines relevant issues from the three areas developing a unified theoretical framework that can be used to build natural language interfaces to temporal databases The framework features an HPSG mapping from English to a formally defined meaning representation language and a corresponding mapping to a temporal extension of the SQL database language The book is accompanied by a freely available prototype interface built according to the framework and implemented using Prolog and ALE This is the first in depth exploration of the notion of time in natural language database interfaces It will be particularly interesting to researchers working on natural language interaction tense and aspect HPSG temporal logics and temporal databases especially those who wish to learn about time related issues in other disciplines
