Readings About Individual And Group Differences:

Explaining Individual Differences in Reading Susan A. Brady, David Braze, Carol A. Fowler, 2011-05-09 Research into reading development and reading disabilities has been dominated by phonologically guided theories for several decades. In this volume, the authors of 11 chapters report on a wide array of current research topics examining the scope, limits, and implications of a phonological theory. The chapters are organized in four sections. The first concerns the nature of the relations between script and speech that make reading possible, considering how different theories of phonology may illuminate the implications of these relations for reading development and skill. The second set of chapters focuses on phonological factors in reading acquisition that pertain to early language development, effects of dialect, the role of instruction, and orthographic learning. The third section identifies factors beyond the phonological that may influence success in learning to read by examining cognitive limitations that are sometimes comorbid with reading disabilities, contrasting the profiles of specific language impairment and dyslexia, and considering the impact of particular languages and orthographies on language acquisition. Finally, in the fourth section, behavioral, genetic, and neurological methods are used to further develop explanations of reading differences and early literacy development. The volume is an essential resource for researchers interested in the cognitive foundations of reading and literacy, language and communication disorders, or psycholinguistics and those working in reading disabilities, learning disabilities, special education, and the teaching of reading.

Individual Differences in the Reading Ability of College Students Ernest Mitchell Anderson, 1928

Individual Differences in Children and Adolescents Donald H. Saklofske, Sybil B. G. Eysenck, This uniquely authoritative collection of original papers with contributions from over twenty countries provides a rare insight into research and applied programs in the study of individual differences in children and adolescents worldwide. While delinquency proves to be one of the most common areas of interest, a wide range of cognitive, personality, and social characteristics are examined, and the use of the Eysenck Personality Questionnaire in many studies allows uniform comparisons to be made between countries. The editors have not only overcome the language barriers which hitherto have made such information virtually inaccessible to the English-speaking world. They have also succeeded in bringing together studies from developed and developing countries, East and West, to present a global picture of adolescent and child psychology. In particular, the book highlights the general and specific cultural influences on child development and adolescent psychology in different countries and reflects the social and research concerns of the countries and cultures represented. The authors comprise a cross section of professionals in the social and behavioral sciences working in university and clinical settings. While North America is well represented by six chapters, including Puerto Rico, as is Europe, particular efforts were made to obtain contributions from Eastern Europe, Asia, and Africa. At the time this book was developed, information exchange with eastern European countries was most difficult. It is very exciting to present chapters from Hungary, Lithuania, Romania, Russia, and Yugoslavia. The inclusion of articles from

Japan Korea Singapore Sri Lanka and Uganda also add another dimension to studies of individual differences in children. Contributions from Australia Israel and New Zealand also allow the book to take on much more of an international perspective on topics ranging from delinquency fears and motivation to intelligence personality and assessment issues. This volume provides a plethora of international perspectives on the study of children. It will be essential to sociologists psychologists educators and child study specialists.

Individual Variation and the Bilingual Advantage - Factors that Modulate the Effect of Bilingualism on Cognitive Control and Cognitive Reserve Maurits Van den Noort, Peggy Bosch, Esli Struys, 2020-02-11

The number of bilingual and multilingual speakers around the world is steadily growing, leading to the questions: How do bilinguals manage two or more language systems in their daily interactions, and how does being bilingual/multilingual affect brain functioning and vice versa? Previous research has shown that cognitive control plays a key role in bilingual language management. This hypothesis is further supported by the fact that foreign languages have been found to affect not only the expected linguistic domains but surprisingly other non-linguistic domains such as cognitive control, attention inhibition and working memory. Somehow learning languages seems to affect executive brain functioning. In the literature, this is referred to as the bilingual advantage, meaning that people who learn two or more languages seem to outperform monolinguals in executive functioning skills. In this Special Issue, we first present studies that investigate the bilingual advantage. We also go one step further by focusing on factors that modulate the effect of bilingualism on cognitive control. In the second, smaller part of our Special Issue, we focus on the cognitive reserve hypothesis with the aim of addressing the following questions: Does the daily use of two or more languages protect the aging individual against cognitive decline? Does lifelong bilingualism protect against brain diseases such as dementia later in life?

Subtypes of Learning Disabilities Lynne V. Feagans, Elizabeth J. Short, 2012-11-12

Although experts agree that various types of learning disabilities do exist, few attempts have been made to classify learning disabled children into subtypes. The editors of this collection feel that the lack of subcategorization has frustrated previous research efforts to obtain a generalizable body of knowledge in the field. To meet this critical need for definitive information, this book presents basic reviews and theoretical approaches used to subtype learning disabled children.
