Bardhan, Christopher Udry, 2000 Volume II of this two volume set focuses on empirical work Industrial Innovation, Networks, and Economic Development Anant Kamath, 2014-11-27 This book offers an innovative examination of how low technology industries operate Based on extensive fieldwork in India the book fuses economic and sociological perspectives on information sharing by means of informal interaction in a low technology cluster in a developing country In doing so the book sheds new light on settings where economic relations arise as emergent properties of social relations This book examines industrial innovation and microeconomic network behaviour among producers and clusters perceiving knowledge diffusion to be a socially spatial as much as a geographically spatial phenomenon This is achieved by employing two methods simulation modelling and quantitative qualitative and historical social network analysis The simulation model based on its findings motivates two empirical studies one descriptive case and one network study of low tech rural and semi urban traditional technology clusters in Kerala state in southern India These cases demonstrate two contrasting stories of how social cohesion either supports or thwarts informal information sharing and learning This book pushes towards an economic sociology approach to understanding knowledge diffusion and technological learning which perceives innovation and learning as being more social processes than the mainstream view perceives them to be In doing so it makes a significant contribution to the literature on defensive innovation and the role of networks in technological innovation and knowledge diffusion as well as to policy studies of Indian small firm and traditional technology clusters

**Inclusive Innovation** Rajeswari S. Raina, Keshab Das, 2020-02-27 This book discusses the role of inclusive innovation for development in rural India

It uses the evidence of innovation in the context of skewed or limited livelihood options and multiple knowledge systems to argue that if inclusive innovation is to happen the actors and the nature of the innovation system need reform. The book presents cases of substantive technological changes and institutional reforms enabling inclusive innovation in rural manufacturing, sustainable agriculture, health services, and the processes of technological learning in traditional informal networks as well as in formal modern commodity markets. These cases offer lessons to enable learning and change within the state and formal science and technology S T organizations. By focusing on these actors central to development economics and innovation systems framework, the book bridges the widening conceptual gaps between these two parallel knowledge domains and offers options for action by several actors to enable inclusive innovation systems. The content is thus of value to a wide audience consisting of researchers, policy makers, NGOs, and industry observers.

Insurance Against Poverty World Institute for Development Economics Research, 2005. Poor people in developing countries are often affected by droughts, floods, illness, crop failure, job loss, and economic downturns. Much of their energy goes into coping with these shocks and into day to day survival. While insurance and credit markets combined with widespread social security provide an important cushion against poverty in rich countries, the need for immediate survival may lock the poor into persistent poverty in developing countries. The poor in developing countries do have informal mechanisms to cope with risk and misfortune. These are based on income diversification, risk avoidance, self insurance by saving together with family, and community based mutual assistance. Nevertheless, the scope of these mechanisms remains limited. Repeated individual specific shocks such as illness or pests or covariate risks associated with drought, flood, or recession undermine the ability of individuals and their families to cope with risk. We now know much more about vulnerability to risk and how poor people cope. Even more importantly, we have learned much about the large long term consequences of these risks which condemn many to persistent poverty and excludes them from economic growth. But there is much that can be done. The micro level studies that underpin this book offer new insights on how effective public action could be more effective in protecting the vulnerable against persistent poverty. Policy should focus on providing a comprehensive menu of ex ante and post crisis protection mechanisms including new forms of insurance, savings, safety nets, and the means to strengthen the poor's asset base. Local communities have a big role to play; public funds should not be used to replace indigenous community based support networks; rather they should be used to build on the strengths of these networks to ensure broader and more effective protection. With numerous thematic chapters and case studies of both best practice and of failure from a mix of low income and middle income countries across the developing world, this book evaluates alternatives in widening insurance and protection provision and makes an important contribution to the topical field of insurance and risk.

**Understanding Development Economics** Adam Fforde,2014-01-03 Important parts of development practice especially in key institutions such as the World Bank are dominated by economists In contrast Development Studies is largely based upon multidisciplinary work in which anthropologists human geographers sociologists and others play important roles Hence a tension has arisen between the claims made by Development Economics to be a scientific measurable discipline prone to wide usage of mathematical modelling and the more discursive practice based approach favoured by Development Studies The aim of this book is to show how the two disciplines have interacted as well as how they differ This is crucial in forming an understanding of development work and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries This book introduces Development Economics to those coming from two different but linked perspectives economists and students of development who are not economists In both explaining and critiquing Development Economics the book is able to suggest the implications of these findings for Development Studies and more broadly for development policy and its outcomes
