

PART TWO Theory of the Concept

The analysis of the *judgment* leads back to *concepts* as their ultimate components. However, the terms that are associated with these concepts as components of the judgment—the terms subject-concept, predicate-concept, and copula-concept—directly designate not special types of concepts, but only the position of the concepts in the judgment. The further investigation of the judgment now necessitates that we identify what *types of concepts* in general are *capable* of being introduced into a judgment, and what types of concepts must *necessarily* be present in the judgment; what type of concept can occupy the position of *subject-concepts*, what type can occupy the position of *predicate-concepts*, and other similar questions. To be able to answer this, however, we must first recognize the different possible kinds of concepts. And to accomplish this, the concepts themselves must first be examined.

Since not only judgments, but *other kinds of thoughts as well*, consist of *concepts* (e.g., questions, valuations, wishes, suggestions, requests, and commands), the general investigation of thoughts finally leads back necessarily to the investigation of concepts. Thus, the *theory of the concept* has a *foundational significance* not only for the theory of the judgment, but for logic in general as the science of thoughts.

The analysis of the judgment has already led us to concepts that—in contrast to those like the subject- and predicate-concept, which mean some objectivity—mean no objectivity at all, but, as with the copula-concept, only perform a logical function (in this case, the referring- and assertion-function). We shall eventually see that there are a great many of such merely functioning, logical concepts. Through consideration of this type of concept we mean to call attention to the fact that, even in the case of object-concepts, concepts not only mean objects but also invariably perform a particular logical function. The consideration of these logical functions will, for the first time, bring the necessary clarity to the structure of thoughts and raise the theory of the concept above the outdated standard on which it still, unfortunately, rests. *Traditional logic* has examined exclusively *object-concepts* and, for this reason, remains mired in many obscurities. Let us begin, therefore, with a consideration of object-concepts. As we shall later see, the findings we reach will for the most part not be valid for the other species of concepts.

FIRST CHAPTER Concepts, Words, Objects

Concepts can form the meaning-content of particular words. The words themselves are not the concepts. Words consist of letters, concepts do not. Different words can express one and the same concept; one and the same word can bear distinct concepts as its different meanings. But the fact that concepts in general form the meaning-content of words is external and accidental to the concepts themselves. Concepts are not, by their nature, the meanings of words. Nowhere in the human act of thinking are concepts necessarily bound up with words. Often, we may even lack a word for a concept that we already have in mind and have to search for it.
