Readings in Medical Artificial Intelligence William J. Clancey, Edward Hance Shortliffe, 1984

Selected Topics in Medical Artificial Intelligence Perry L. Miller, 2012-12-06 Computer technology has impacted the practice of medicine in dramatic ways Imaging techniques provide noninvasive tools which alter the diagnostic process Sophisticated monitoring equipment presents new levels of detail for both patient management and research In most of these technology applications the computer is embedded in the device its presence is transparent to the user There is also a growing number of applications in which the health care provider directly interacts with a computer In many cases these applications are limited to administrative functions e.g. office practice management location of hospital patients appointments and scheduling Nevertheless there also are instances of patient care functions such as results reporting decision support surveillance and reminders This series Computers and Medicine will focus upon the direct use of information systems as it relates to the medical community After twenty five years of experimentation and experience there are many tested applications which can be implemented economically using the current generation of computers Moreover the falling cost of computers suggests that there will be even more extensive use in the near future Yet there is a gap between current practice and the state of the art

Biotechnology: Concepts, Methodologies, Tools, and Applications Management

Association, Information Resources, 2019-06-07 Biotechnology can be defined as the manipulation of biological process systems and organisms in the production of various products With applications in a number of fields such as biomedical chemical mechanical and civil engineering research on the development of biologically inspired materials is essential to further advancement Biotechnology Concepts Methodologies Tools and Applications is a vital reference source for the latest research findings on the application of biotechnology in medicine engineering agriculture food production and other areas It also examines the economic impacts of biotechnology use Highlighting a range of topics such as pharmacogenomics biomedical engineering and bioinformatics this multi volume book is ideally designed for engineers pharmacists medical professionals practitioners academicians and researchers interested in the applications of biotechnology Echnology Assessment in Software Applications Harold F. O'Neil, Jr., Eva Baker, Harold F. O'Neil, 2013-11-05 This volume offers an expansion of ideas presented at a recent conference convened to identify the major strategies and more promising practices for assessing technology The authors representing government business and university sectors helped to set the boundaries of present technology assessment by offering perspectives from computer science cognitive and military psychology and education Their work explores both the use of techniques to assess technology and the use of technology to facilitate the assessment process The book's main purpose is to portray the state of the art in technology assessment and to provide conceptual options to help readers understand the power of technology Technological innovation will continue to develop its own standards of practice and effectiveness To the extent that these practices are empirically based designers supporters and consumers will be given better information for their decisions *Clinical Information Systems* Bruce I. Blum, 2012-12-06 As its name implies this book deals with clinical information systems The clinical information system or CIS is an automated system with a long term database containing clinical information used for patient care This definition excludes business systems no clinical data physiological monitoring systems no long term database and many research systems not used in patient care The theses of this book are a that CIS technology is mature b that the CIS will have a major impact upon patient care and the health delivery system and c that the number of commercial systems which now offer these potential benefits is very small The objective of this book is to establish the above theses and thereby a inform both users and developers b increase the demand for more sophisticated products and finally c provide marketplace incentives to advance the state of the art The CIS is an application of computer technology for a specific class of problems Its development requires a knowledge of the technology with an understanding of the application area As with any tool based application the scope of the product will be limited by the capability of the tool In the case of the CIS reliable computers with comprehensive database facilities became commercially available in the early 1970s By the mid 1970s there was a maturation of the literature and evaluations of 5 years use began to appear As will be shown there have been surprisingly few new ideas introduced since the 1970s

Nature-Inspired Intelligent Techniques for Solving Biomedical Engineering Problems Kose, Utku, Guraksin, Gur Emre, Deperlioglu, Omer, 2018-03-31 Technological tools and computational techniques have enhanced the healthcare industry These advancements have led to significant progress and novel opportunities for biomedical engineering Nature Inspired Intelligent Techniques for Solving Biomedical Engineering Problems is a pivotal reference source for emerging scholarly research on trends and techniques in the utilization of nature inspired approaches in biomedical engineering Featuring extensive coverage on relevant areas such as artificial intelligence clinical decision support systems and swarm intelligence this publication is an ideal resource for medical practitioners professionals students engineers and researchers interested in the latest developments in biomedical technologies **The Perception of Visual Information** William Thomson, Peter N.T. Wells, 2013-03-09 Human knowledge is primarily the product of experiences acquired through interactions of our senses with our surroundings Of all the senses vision is the one relied on most heavily by most people for sensory input about the environment Visual interactions can be divided into three processes 1 detection of visual information 2 recognition of the external source of the information and 3 interpretation of the significance of the information These

processes usually occur sequentially although there is considerable interdependence among them With our strong dependence on the processes of visual interactions we might assume that they are well characterized and understood Nothing could be further from the truth Human vision remains an engima in spite of speculations by philosophers for centuries and more recently of attention from physicists and cognitive and experimental psychologists How we see and how we know what we see remains an unsolved mystery that challenges some of the most creative scientists and cognitive specialists The Nature of Expertise Michelene T.H. Chi,Robert Glaser,Marshall J. Farr,2014-01-02 Due largely to developments made in artificial intelligence and cognitive psychology during the past two decades expertise has become an important subject for scholarly investigations The Nature of Expertise displays the variety of domains and human activities to which the study of expertise has been applied and reflects growing attention on learning and the acquisition of expertise Applying approaches influenced by such disciplines as cognitive psychology artificial intelligence and cognitive science the contributors discuss those conditions that enhance and those that limit the development of high levels of cognitive skill

Psychology of Learning and Motivation ,1994-12-23 The Psychology of Learning and Motivation publishes empirical and theoretical contributions in cognitive and experimental psychology ranging from classical and instrumental conditioning to complex learning and problem solving Each chapter provides a thoughtful integration of a body of work Volume 31 covers children s representations of groups diagnostic reasoning in medical expertise and object representation *Current Trends in Knowledge Acquisition* Bob Wielinga,1990 Knowledge acquisition has become a major area of artificial intelligence and cognitive science research The papers in this book show that the area of knowledge acquisition for knowledge based systems is still a diverse field in which a large number of research topics are being addressed However several main themes run through the papers First the issues of integrating knowledge from different sources and K A tools is a salient topic in many papers A second major topic in the papers is that of knowledge modelling Research in knowledge based systems emphasises the use of generic models of reasoning and its underlying knowledge An important trend in the area of knowledge modelling aims at the formalisation of knowledge models Where the field of knowledge acquisition was without tools and techniques years ago now there is a rapidly growing body of techniques and tools Apart from the integrated workbenches already mentioned above several papers in this book present new tools Although knowledge acquisition and machine learning have been considered as separate subfields of AI there is a tendency for the two fields to come together This publication combines machine learning techniques with more conventional knowledge elicitation techniques A framework is presented in which reasoning problem solving and learning together form a knowledge intensive system that can acquire knowledge from its own experience Health Decision Support Systems Joseph K. H. Tan,Samuel Barry Sheps,1998 This textbook is a logical continuation of Dr Tan s first book Health Management Information Systems For graduate level and upper level undergraduate courses it explains the use of health decision support systems throughout the health care industry citing

examples from hospitals managed care organizations and long term care facilities This book includes learning objectives case studies and review questions An Instructor's guide is also available **CommonKADS Library for Expertise**

Modelling Joost Breuker, Walter Van de Velde, 1994 The reuse of abstract models of problem solving is a major step towards cost effective and quality assured knowledge based system development The techniques are discussed in this text AIME 89 Jim Hunter, John Cookson, Jeremy Wyatt, 2012-12-06 The Second European Conference on Artificial Intelligence in Medicine followed the successful meeting in Marseilles in 1987 As for AIME 87 the goal of AIME 89 was to promote scientific interchange within and between all subfields of AI in medicine among researchers from all over the world and especially from Europe There were sessions on knowledge elicitation and acquisition architectures for medical knowledge based systems clinical applications methodology reasoning based on physiological models and uncertainty It is clear from the quality of papers presented that the rate of development which took place between the Pavia meeting of 1985 and AIME 87 has been well maintained With the launch of the European Community's exploratory programme in Advanced Informatics in Medicine in Europe 1989 is clearly a very important year for this discipline AIME 89 provided an important forum which demonstrated progress in some of the more difficult methodological problems and advances in the application of these techniques to real world medicine This volume should be consulted by anyone who wishes to appreciate the state of the art in Medical AI in Europe **Organizational and Social Perspectives on Information Technology** Richard Baskerville, Jan Stage, Janice I. DeGross, 2013-03-14 The articles in this book constitute the proceedings papers from the IFIP WG 8.2 Working Conference IS2000 The Social and Organizational Perspective on Research and Practice in Information Technology held June 10-12 2000 in Aalborg Denmark The focus of the conference and therefore this book is on the basic aim of the working group namely the investigation of the interrelationships among four major components information systems IS information technology IT organizations and society This basic social and organizational perspective on research and practice in information technology may have evolved substantially since the founding of the group for example increasing the emphasis on IS development The plan for the conference was partially rooted in the early WG 8.2 traditions in which working conferences were substantially composed of invited papers For IS2000 roughly half of the paper presentations were planned to be invited the remaining half were planned to be double blind refereed in response to a Call For Papers Invited papers were single blind reviewed in order to provide the authors with pre publication feedback and comments along with the opportunity to revise their papers prior to its final incorporation in this book Computers in Critical Care and Pulmonary Medicine Peter M. Osswald, 2012-12-06 The anesthetist computer interface tends to be a problem for the utilization of computer systems for anesthesia Ergonomic interface design with an emphasis on the coherency of the interface's static and dynamic structure may improve this situation To investigate this proposition we developed an Anesthesia Information System AIS with a touch sensitive monitor as the hardware user interface Basic data input and system control techniques were defined and implemented Record
