**Investigations in Universal Grammar** Stephen Crain, Rosalind Thornton, 2000

This introductory guide to language acquisition research is presented within the framework of Universal Grammar, a theory of the human faculty for language

The authors focus on two experimental techniques for assessing children's linguistic competence: the Elicited Production task, a production task, and the Truth Value Judgment task, a comprehension task

Their methodologies are designed to overcome the numerous obstacles to empirical investigation of children's language competence

They produce research results that are more reproducible and less likely to be dismissed as an artifact of improper experimental procedure

In the first section of the book the authors examine the fundamental assumptions that guide research in this area; they present both a theory of linguistic competence and a model of language processing

In the following two sections they discuss in detail their two experimental techniques

**The Symbolic and Connectionist Paradigms** John Dinsmore, 2014-01-14

The modern study of cognition finds itself with two widely endorsed but seemingly incongruous theoretical paradigms

The first, inspired by formal logic and the digital computer, sees reasoning in the principled manipulation of structured symbolic representations

The second, inspired by the physiology of the brain, sees reasoning as the behavior that emerges from the direct interactions found in large networks of simple processing components

Each paradigm has its own accomplishments, problems, methodology, proponents, and agenda

This book records the thoughts of researchers from both computer science and philosophy on resolving the debate between the symbolic and connectionist paradigms

It addresses theoretical and methodological issues throughout but at the same time exhibits the current attempts of practicing cognitive scientists to solve real problems
