F. Cossec, Dolgachev, 2012-12-06 This is the first of two volumes representing the current state of knowledge about Enriques surfaces which occupy one of the classes in the classification of algebraic surfaces Recent improvements in our understanding of algebraic surfaces over fields of positive characteristic allowed us to approach the subject from a completely geometric point of view although heavily relying on algebraic methods Some of the techniques presented in this book can be applied to the study of algebraic surfaces of other types We hope that it will make this book of particular interest to a wider range of research mathematicians and graduate students Acknowledgements The undertaking of this project was made possible by the support of several institutions Our mutual cooperation began at the University of Warwick and the Max Planck Institute of Mathematics in 1982 83 Most of the work in this volume was done during the visit of the first author at the University of Michigan in 1984 1986 The second author was supported during all these years by grants from the National Science Foundation **Enriques Surfaces II** Igor Dolgachev, Shigeyuki Kondō, 2025-03-25 This book consisting of two

volumes gives a contemporary account of the study of the class of projective algebraic surfaces known as Enriques surfaces These surfaces were discovered more than 125 years by F Enriques in an attempt to extend the characterization of rational algebraic curves to the case of algebraic surfaces The novel feature of the present exposition is that no assumption on the characteristic of the ground field is assumed This requirement calls for exploring the geometry of such surfaces by purely geometric and arithmetic methods that do not rely on transcendental methods such as the theory of periods of algebraic surfaces of type K3 which are close relatives of Enriques surfaces Some of the methods use many technical tools from algebraic geometry that are discussed in Volume 1 and will be a useful source of reference for the study of algebraic surfaces over fields of positive characteristic Volume 1 also contains a detailed exposition of the theory of elliptic surfaces over fields of arbitrary characteristic The second volume discusses many new topics for example the theory of automorphisms of Enriques surfaces and the relationships with hyperbolic geometry Together the two volumes contain many examples and an extensive bibliography made up of more than 700 items **Enriques Surfaces I** François Cossec, Igor Dolgachev, Christian Liedtke, 2025-05-21 This book consisting of two volumes gives a contemporary account of the study of the class of projective

algebraic surfaces known as Enriques surfaces These surfaces were discovered more than 125 years by F Enriques in an attempt to extend the characterization of rational algebraic curves to the case of algebraic surfaces The novel feature of the present exposition is that no assumption on the characteristic of the ground field is assumed This requirement calls for exploring the geometry of such surfaces by purely geometric and arithmetic methods that do not rely on transcendental methods such as the theory of periods of algebraic surfaces of type K3 which are close relatives of Enriques surfaces Some of

the methods use many technical tools from algebraic geometry that are discussed in Volume 1 and may be a useful source of references for the study of algebraic surfaces over fields of positive characteristic Volume 1 also contains a detailed exposition of the theory of elliptic surfaces over fields of arbitrary characteristic The first volume is an essential and greatly extended revision of *Enriques Surfaces I* published in 1989 by Birkhäuser and co-authored by F. Cossec and I. Dolgachev Included is a new chapter devoted to the theory of moduli of Enriques surfaces The two volumes together contain many examples and an extensive bibliography made up of more than 700 items

Surgery on Contact 3-Manifolds and Stein Surfaces Burak Ozbagci, András Stipsicz, 2013-03-09

The groundbreaking results of the near past Donaldson's result on Lefschetz pencils on symplectic manifolds and Giroux's correspondence between contact structures and open book decompositions brought a topological flavor to global symplectic and contact geometry This topological aspect is strengthened by the existing results of Weinstein and Eliashberg and Gompf in dimension 4 on handle attachment in the symplectic and Stein category and by Giroux's theory of convex surfaces enabling us to perform surgeries on contact 3-manifolds The main objective of these notes is to provide a self-contained introduction to the theory of surgeries one can perform on contact 3-manifolds and Stein surfaces We will adopt a very topological point of view based on handlebody theory in particular on Kirby calculus for 3 and 4-dimensional manifolds Surgery is a constructive method by its very nature Applying it in an intricate way one can see what can be done These results are nicely complemented by the results relying on gauge theory a theory designed to prove that

certain things cannot be done We will freely apply recent results of gauge theory without a detailed introduction to these topics we will be content with a short introduction to some forms of Seiberg Witten theory and some discussions regarding Heegaard Floer theory in two Appendices

Experiences from Surface Water Quality Monitoring Antoni Munné, Antoni Ginebreda, Narcís Prat, 2015-12-20 This book details the experiences gained by the Catalan Water Agency ACA in a Mediterranean watershed the Catalan River Basin District following the launch of the EU Water Framework Directive WFD in the year 2000 Experts in rivers reservoirs lakes wetlands and estuaries present 13 chapters defining tools for water status assessment specially adapted to Mediterranean conditions The content of this and the companion volume *Experiences from Ground Coastal and Transitional Water Quality Monitoring The EU Water Framework Directive Implementation in the Catalan River Basin District Part II* are the result of an excellent collaboration between the ACA and several Catalan universities and research centers to cope with new challenges provided by the WFD monitoring requirements The volume serves as a useful guide for environmental managers and scientists engaged in other European as well as Non European river basins

The Films of Carlos Saura Marvin D'Lugo, 2021-01-12 Spanish filmmaker Carlos Saura who began his career under the censorship of Franco's regime has forged an international reputation for his unique cinematic treatment of emotional and spiritual responses to repressive political conditions In films such as *Carmen* and *El Dorado* where reality and fantasy are deliberately fused together Saura reveals the illusions of Franco's mythologized Spain a chaste Catholic and heroic Spain of the Golden Age that tend to isolate Spaniards from the rest of Europe from each other and from their own individuality In this first English language book on Saura Marvin D Lugo looks at the social and artistic forces behind this film auteur's highly personal cinema Tracing Saura's career over three decades D Lugo discusses each work from *Hooligans* 1959 a realist film about a Madrid street gang member trying to become a bullfighter to *The Dark Night* 1989 a film dealing with the persecution of the religious reformer St John of the Cross in the late sixteenth century Throughout he argues that Saura's cinematic style results from a highly original response to the political and historical constraints of Spanish culture D Lugo shows how in order to explore the complex cultural politics of Spanishness as it was institutionalized under Franco

Saura frames his narrations through the eyes of characters who question the forces that shape personal and collective identity Moving beyond the limits of traditional auteur studies this book addresses the relationship between the filmmaker and the cultural ideology that historically has thwarted and manipulated the expressions of individuality in Spanish society
