**Bio-Inspired Land Remediation** Vimal Chandra Pandey, 2023-01-01 Land is fundamental to the human life The upper layer of land is a non renewable resource and source of food Therefore land health is essential to long term food security and to promote sustainable livelihoods On account of urbanization industrialization and population growth land pollution is one of the major issues worldwide As a result land pollution is continuing across the world and has been linked with a wide range of potentially toxic contaminants at rates that deteriorate land quality Land pollution can result either anthropogenic activities or natural activities. The major contaminants of land pollution are metalloids petroleum hydrocarbon radioactive elements polyaromatic hydrocarbons PAHs Pesticide other organic pollutants etc that comes from different types of sources In urban and peri urban areas irrigation of agricultural land with polluted water is also a reason of land pollution Therefore land security is an important issue for future sustainability. Its remediation and management are important issue worldwide to protect land quality and functions Land pollution means degradation of earth's surface Polluted land comes under the category of degraded land Hence the remediation of polluted land is essential for regaining biodiversity and ecosystems services and thereby achieving United Nations Sustainable Development Goals UN SDGs This fact showed the need to develop research into land remediation Bio inspired land remediation has undergone a huge development Therefore Biomanagement has a lot of potential to secure upper earth's surface through the land remediation programs targeted during the United Nations Decade on Ecosystem Restoration 2021 2030 This book explores the remediation of land pollution that includes Phytoremediation Bioremediation bacterial remediation and fungal remediation Vermiremediation Biochar based remediation and other Bio inspired remediation This book will be a remarkable asset for research scholars environmentalists ecological scientist agriculturist practitioners policy makers entrepreneurs and other stakeholders alike Soil Degradation and Restoration in Arid and Semi-Arid Regions Kaibo Wang, Jianping Li, Zhengchao Zhou, Xunchang John Zhang, 2023-11-06

top ten gold producing countries in the world and its actions towards achieving environmental sustainability in the mining sector must be shared with the world There are some great success stories as well as challenges in the mining sector sustainability from Ghana's case which are left undocumented and are limited in investigations in a scientific book Such enviable feats chalked by some mining companies must be documented so that lessons can be borrowed for replications in restoring similar degraded mining sites elsewhere across the globe Additionally companies can learn from the success stories and challenges encountered in mine land reclamation and revegetation in this book Revegetation may present a sustainable option for the reclamation and restoration of mine soil degradation. The restoration process involves many strategies aimed at improving the quality of soil such as augmenting the quantity of soil organic matter enhancing nutrient availability increasing cation exchange capacity stimulating biological activities and optimizing the physical qualities of the soil Researchers scientists and consultants in the subject of soil pollution and remediation have conducted a great deal of study using a variety of techniques and approaches However a fragmented reporting of techniques and results has resulted from the documentation and dissemination of success stories challenges and findings mostly through individual technical reports and publication in scholarly journals This book provides an in depth analysis of the many scientific methodologies used to identify environmental risks related to potentially toxic elements PTEs in mining sites and revegetation as a strategy to ameliorating contaminated and degraded mining sites The book covers application of these methods in identifying soil human health risks and planning towards reclamation of such derelict ecosystems The book combines reviews of relevant literature laboratory investigation on PTEs from representative mine contaminated soil and spoil samples as well as appraisal of case studies on successful reclamation and revegetation of mine degraded lands Applications of the total element concentration method size fractionation experiments sequential extraction analyses risk assessment indices geospatial analysis redox chemistry experiments synchrotron radiation science incubation experiments and pot experimental trials in soil remediation works were documented first hand in a single piece in this book The book is organized into nineteen chapters each dedicated to soil contamination caused by mining and revegetation as a sustainable solution The initial parts of the book deal with various techniques for identifying soil human health risks They include some topics such as the consequences of heavy metal presence and build up the sources from which heavy metal pollutants originate and the possible hazards they bring to plant human and soil health The second parts begin with the concept of mining sector sustainability and explore revegetation as a strategy for reclaiming and remediating mining contaminated lands with the objective of restoring ecosystem functionality improving soil characteristics and cleaning metal contaminated soils The book may serve as a valuable resource for individuals occupying various professional roles and engaging in academic pursuits such as project officers operating within the environmental safety and health divisions of mining enterprises consultants specializing in land reclamation lecturers specializing in environmental and soil sciences students and individuals with a strong interest in environmental protection
