Satellite Monitoring of Water Resources in the Middle East Amin Shaban,2022-10-15 This book presents both updated and new measurements on water resources from selective pilot areas from the Middle East Demand for water has become very crucial notably in arid and semiarid regions like in the Middle East The changing climate and the increased population are the most striking challenges on water resources in this region where the largest part of its territory is dry lands and deserts with minimal precipitation and high evaporation rates and thus the average per capita of water does not exceed 25 m³ year This resulted in developing many studies and researches in different Middle East countries to clearly identify and assess the hydrological characteristics of the available water resources and to explore new resources in order to secure balanced water supply demand As a first of its type this book introduces comprehensive knowledge on the successful reports of the use of satellite images in water studies in the Middle East and the economic value resulted from adopting these techniques Based on illustrated case studies the book will represent a significant resource for a large number of experts academics researchers engineers and different level stakeholders including the decision makers

Earth Observation for Land and Emergency Monitoring Heiko Balzter,2017-03-14 Earth Observation Science EOS is the study of the global Earth land ocean atmosphere system through observations The principal tools for such studies are measurements from space since these provide the coverage of the planet that is necessary to capture the behaviour of the entire coupled system In addition surface observations and measurements from aircraft balloons and sounding rockets provide valuable contributors to what are now termed integrated global observing systems Coupled with models the EOS measurement suites provide powerful tools for research into the factors controlling and changing the Earth system in which we live The objectives of this book are to describe new methods and applications of satellite technology in the fields of land

and emergency monitoring It draws on new research outcomes from the European FP7 project GIONET European Centre of Excellence in Earth Observation Research Training GIONET combines industrial partners with universities and research institutes and this book provides a perspective on Earth Observation applications that is motivated by the cross fertilisation of both sectors Hence this book will find readers in both industry and academia This book highlights a broad range of innovative uses of Earth Observation technology to support environmental management decision making crisis management and climate policies It uses advanced concepts of multi sensor image integration multi temporal analysis and synergies between data and models This is a truly interdisciplinary subject that encompasses a range of applications in various fields which are discussed in detail throughout the text If you are interested in remote sensing applications and looking for inspiration this is the book for you

Satellite Earth Observations and Their Impact on Society and Policy Masami Onoda,Oran R Young,2017-06-16 The result of a workshop bringing together an international advisory board of experts in science satellite technologies industry innovations and public policy this book addresses the current and future roles of satellite Earth observations in solving large scale environmental problems The book showcases the results of engaging distinct communities to enhance our ability to identify emerging problems and to administer international regimes created to solve them It also reviews the work of the Policy and Earth Observation Innovation Cycle PEOIC project an effort aimed at assessing the impact of satellite observations on environmental policy and to propose a mission going forward that would launch an innovation cycle The achievements of such a mission would feed back to innovations in next generation observation technology thus contributing to global policy demand for policy relevant information This book is open access under a CC BY license

CEOS, Committee on Earth Observation Satellites CEOS Disaster Management Support Group, 2002. ***Scientific Satellite and Moon-Based Earth Observation for Global Change*** Huadong Guo, Wenxue Fu, Guang Liu, 2019-06-27. Global change involves complex and far-reaching variations in the Earth's systems, and satellite observations have been widely used in global change studies. Over the past five decades, Earth observation has developed into a comprehensive system that can conduct dynamic monitoring of the land, the oceans, and the atmosphere at the local, regional, and even global scale. At the same time, although a large number of Earth observation satellites have been launched, very few of them are used in global change studies. The lack of scientific satellite programs greatly hinders research on global change. This book proposes using a series of global change scientific satellites to establish a scientific observation grid for global environmental change monitoring from space and offers the first comprehensive review of lunar-based Earth observation. These scientific satellites could provide not only basic datasets but also scientific support in facilitating advances in international global change research.
