mobility communications required by combat troops while trunk communications systems have provided high capacity communications between headquarters at the expense of mobility The focus of this book is on new information age technologies that promise to offer seamless integration of real time data sharing creating a single logical network architecture to facilitate the movement of data throughout the battlespace Because the structure of this network is constrained by the fundamental trade off between range mobility and capacity that applies to all communications systems this network is unlikely to be based on a single network technology This book presents an architecture for this network and shows how its subsystems can be integrated to form a single logical network

Lead Markets Marian Beise, 2001-10-23 1 1 Summary This thesis intends to answer three questions First what is a lead market second what constitutes a lead market and third how companies can harness lead markets to generate global innovations Considering the international cross border diffusion of innovations one can observe that a particular technological design such as the facsimile machine the personal computer or the mobile cellular telephone is often adopted by one country or region much earlier than by other countries which subsequently follow this country which I will call the lead market A lead market is defined as a country that adopts an innovation that is subsequently adopted worldwide When different designs of an innovation compete internationally the design preferred in the lead market becomes the global dominant design The study suggests a theoretical explanation for the phenomena of lead markets and collects empirical evidence from a detailed case study of the cellular mobile tele of an innovation design adopted first phone industry The international diffusion by the lead market i e subsequent adoption of an innovation design preferred in the lead market by other countries can be put down to the special market context in the lead market The market context includes demand preferences the environmental condition and the degree of competition Multinational firms are often confronted not only with varying market acceptance of new products and processes from country to country but with national preferences for particular specifications of an innovation i e
