McKee, 2007-03-06 Coastal waters are important ecological systems and vital assets for many nations Coastal waters are also complex dynamic environments where a vast array of coupled biological chemical geological and physical processes occurs

over multiple time and space scales The optical environment of coastal waters is particularly complex There is considerable interest in studying coastal waters to gain a better understanding of earth system processes for climatic change research or environmental factors for management decisions Consequently there is a need for robust effective technologies and methods for studying these important complex environments Remote sensing from aircraft and space based platforms offers unique large scale synoptic data to address the intricate nature of coastal waters However many researchers wishing to apply remote sensing to a dynamic coastal environment are faced with the challenge of learning a technology laden with new and often confusing terminology data and methods of processing and analysis To gain an adequate understanding of remote sensing generally involves scouring countless technical manuals reports and scientific papers Hence the major goal of writing this work was to produce a comprehensive resource for those involved in various studies of coastal aquatic environments With its primary focus on optical remote sensing using passive instruments the editors have indeed succeeded in creating a book the scientific community has been waiting for
