Young, 2000-10-03 Long recognized by naturalists and adventurers as a dramatically unique region the Arctic has recently emerged as an area of increasing political strategic and economic importance The Arctic is both one of the world's largest and smallest regions encompassing 15% of the earth's land mass yet inhabited by fewer than 1% of the world's population Its physical vastness is coupled with a wealth of natural resources in oil alone the

Far North contributes that majority of Russia's production and 25% of US output. At the same time the Circumpolar North is home to diverse indigenous peoples and cultures thus setting the stage for conflicts of international scope. In this collection of essays Oran Young provides a foundation for studying the politics of the Arctic as a distinctive international region. Expanding the traditional approach to area studies he examines the Far North not only for its unique features but also as an arena within which to develop new approaches to various issues of worldwide interest. Young challenges persistent stereotypes that marginalize the region moving beyond the romanticism of many observers to arrive at an understanding of the complex social and ecological systems of the Far North. In doing so Young thoughtfully establishes the Arctic as an area of international importance both in its own right and in relation to other geopolitical regions.

More Than a Meal Karen Davis, 2001. This scholarly and authoritative book examines the cultural and literal history as well as the natural history and biological needs and concerns of turkeys. Davis explores how turkeys came to be seen as birds who were not only the epitome of failure or stupidity but also the suitable centerpiece of the celebration of freedom in America itself Thanksgiving. She examines the many varieties of turkeys and uncovers the methods by which millions of turkeys are raised fattened and slaughtered on farms around America today. Davis takes us back to European folklore about turkeys the myths fairytales and downright lies told about turkeys and their habits and habitats. She shows how turkeys in the wild have complex lives and family units and how they were an integral part of Native American and continental cultures and landscape before the Europeans arrived. Finally Davis draws conclusions about our paradoxical complex and bestial relationship not just with turkeys but with all birds and thus with all other animals. She examines how our treatment of animals shapes our other values about ourselves our relationship with other human beings and our attitude toward the land nation and the world.

A History of Environmentalism Marco Armiero, Lise Sedrez, 2014-07-31. Think globally act locally has become a call to environmentalist mobilization proposing a closer connection between global concerns local issues and individual responsibility. *A History of Environmentalism* explores this dialectic relationship with ten contributors from a range of disciplines providing a history of environmentalism which frames global themes and narrates local stories. Each of the chapters in this volume addresses specific struggles in the history of environmental movements for example over national parks species protection forests waste contamination nuclear energy and expropriation. A diverse range of environments and environmental actors are covered including the communities in the Amazonian Forest the antelope in Tibet atomic power plants in Europe and oil and politics in the Niger Delta. The chapters demonstrate how these conflicts make visible the intricate connections between local and global the body and the environment and power and nature. *A History of Environmentalism* tells us much about transformations of cultural perceptions and ways of production and consuming as well as ecological and social changes. More than offering an exhaustive picture of the entire environmentalist movement *A History of Environmentalism* highlights the importance of the experience of environmentalism within local communities. It offers a
