Quantificational Modification Zaina Hafiz Tsouhlaris, 2011 The thesis explores the syntactic and semantic dimensions of four linguistic elements that appear in Modern Greek arguably as quantifiers and modifiers i.e. in the form of Quantificational Modifiers QMods *olos* all whole overall and its extension *olikos* total merikos some a few partial *ligos* some few little insignificant and *polis* many great considerable Such QMods are analyzed as measure quantifiers of scalar semantics that appear in a syntactic position common to adjectival modifiers The thesis explores specific sets of reading and their interpretations Such a phenomenon is common to Modern Greek English French and Arabic QMods and gives evidence to the universality of Quantificational Modification Chapter 1 discusses Quantification as semantic interpretation along with the main questions this research intends to answer while Chapter 2 reviews recent literature on Quantification within and across languages Chapter 3 focuses on Modern Greek expressions of Quantification and extends chapter 2 into a further discussion about the various syntactic manifestations Chapters 4 and 5 are extensions to chapters 2 and 3 as they discuss the semantics of specific QMods as total and partial quantifiers which operate on homomorphic sets of degrees and amounts Chapter 6 discusses the broader issues in the thesis from a theoretical and typological perspective that establishes

Quantificational Modification as a universal and purely semantic subclass of Quantification Our findings are summarized in chapter 7 followed by suggestions for expanding our investigation into other related areas
