Major Local Tobacco Control Ordinances In The United States U. S. Dept Of Health And Human Services,1993 **Major Local Tobacco Control Ordinances in the United States** ,1993 **Major Local Tobacco Control Ordinances in the United States** Department of Health & Human Services,National Institutes of Health,National Cancer Institute,2014-05-22

The adoption of local ordinances regulating the use or sale of tobacco represents an extraordinary social trend in the United States Although such laws were virtually unheard of just a decade ago hundreds of cities and counties across this country have taken aggressive action to control smoking in public settings as well as making it more difficult for minors to obtain tobacco Major Local Tobacco Control Ordinances in the United States provides clear documentation of the extent to which local communities are enacting legislation to restrict or severely curtail tobacco use The monograph also represents a social barometer regarding the seriousness with which communities view the smoking problem and the range of remedial actions taken to reduce tobacco use through socially responsible public policies These ordinances are not based on social whim however but are based on decades of scientific research which has increasingly documented the health consequences of tobacco for users and non users alike Since the early 1960 s medical science has left no doubt about the deadly nature of tobacco use especially the practice of cigarette smoking The scientific data base establishing a causal connection between smoking and increased death rates from various cancers cardiovascular diseases chronic obstructive lung diseases fetal distress and other chronic and debilitating conditions is truly staggering Between 1960 and 1990 more than 60 000 scientific citations appeared in the worldwide literature linking cigarettes and other forms of tobacco use to these adverse health outcomes Smoking is a health hazard in its own right but smoking potentiates the risks of several environmental and occupational carcinogens More than 400 000 premature deaths annually occur in the United States directly attributed to the effects of cigarette smoking Of course we should recall that even smokeless tobacco is a health hazard Such high levels of death and disability affect us all however whether we smoke or not In a comprehensive study conducted by the Congress Office of Technology Assessment in 1985 it was estimated that cigarette smoking alone cost this Nation upwards of 95 billion annually Given the spiraling increase in costs for both acute and long term health care over just the last few years such costs would be substantially greater in 1993 dollars As a Nation we simply cannot afford to pay for the health care costs associated with smoking Major Local Tobacco Control Ordinances in the United States should also provide a tangible boost for local tobacco control policy development It contains a comprehensive review of local and State tobacco control legislation trends in tobacco control ordinances and model laws for reducing both nonsmokers exposure to ETS and youth access to tobacco products It is in short a call to action to all who wish to improve the health of our Nation through reasonable and prudent public health policies that reduce tobacco addiction among our young and protect nonsmokers from the documented hazards of environmental tobacco smoke Nevertheless true prevention of smoking related illnesses must depend on individual

responsibility and action Each of us as individuals must do our part

Reducing Tobacco Use ,2000 Extensive report covering the history of tobacco use in the U S and the various attempts to regulate its use advertising minors access and the like **Smoke-Filled Rooms** W. Kip Viscusi,2010-02-15 The 1998 out of court settlements of litigation by the states against the cigarette industry totaled 243 billion making it the largest payoff ever in our civil justice system Two key questions drove the lawsuits and the attendant settlement Do smokers understand the risks of smoking And does smoking impose net financial costs on the states With *Smoke Filled Rooms* W Kip Viscusi provides unexpected answers to these questions drawing on an impressive range of data on several topics central to the smoking policy debate Based on surveys of smokers in the United States and Spain for instance he demonstrates that smokers actually overestimate the dangers of smoking indicating that they are well aware of the risks involved in their choice to smoke And while smoking does increase medical costs to the states Viscusi finds that these costs are more than financially balanced by the premature mortality of smokers which reduces their demands on state pension and health programs so that

on average smoking either pays for itself or generates revenues for the states Viscusi's eye opening assessment of the tobacco lawsuits also includes policy recommendations that could frame these debates in a more productive way such as his suggestion that the FDA should develop a rating system for cigarettes and other tobacco products based on their relative safety thus providing an incentive for tobacco manufacturers to compete among themselves to produce safer cigarettes Viscusi's hard look at the facts of smoking and its costs runs against conventional thinking But it is also necessary for an informed and realistic debate about the legal financial and social consequences of the tobacco lawsuits People making 50 000 or more pay 08 percent of their income in cigarette taxes but people with incomes of less than 10 000 pay 1 62 percent twenty times as much The maintenance crew at the Capitol will bear more of the sin tax levied on cigarettes than will members of Congress who voted to boost it Cigarettes are not a financial drain to the U S In fact they are self financing as a consequence of smokers premature mortality The general public estimates that 47 out of 100 smokers will die from lung cancer because they smoke Smokers believe that 40 out of 100 will die of the disease Scientists estimate the actual number of 100 smokers who will die from lung cancer to be between 7 and 13 State Tobacco Prevention and Control Activities, 1991 **The Health Consequences of Involuntary Exposure to Tobacco Smoke**, 2006 This Surgeon General's report returns to the topic of the health effects of involuntary exposure to tobacco smoke The last comprehensive review of this evidence by the Department of Health and Human Services DHHS was in the 1986 Surgeon General's report **The Health Consequences of Involuntary Smoking** published 20 years ago this year This new report updates the evidence of the harmful effects of involuntary exposure to tobacco smoke This large body of research findings is captured in an accompanying dynamic database that profiles key epidemiologic findings and allows the evidence on health effects of exposure to tobacco smoke to be synthesized and updated following the format of the 2004 report **The Health Consequences of Smoking** The database enables users to explore the data and studies supporting the conclusions in the report The database is available on the Web site of the Centers for Disease Control and Prevention CDC at <http://www.cdc.gov/tobacco> **Handbook of Health Behavior Research IV** David S.
