Health Promotion for Nurses Stewart Piper, 2009-05-07 Health promotion is an increasingly high profile aspect of a nurse s role both in line with health policy and as nursing has shifted from a disease model to a health model This textbook explores how and why health promotion works in

nursing developing a new framework for understanding the nurse's role and promoting evidence-based practice. Drawing on empirical research and discussing existing theories of health promotion and of nursing, Stewart Piper identifies three principal approaches: The Nurse as Behaviour Change Agent, The Nurse as Strategic Practitioner, and The Nurse as Empowerment Facilitator. The book describes the aims, processes, impact, and outcomes of health promotion interventions in nursing for each of these models and identifies criteria for evaluating the associated nursing interventions, enabling clinical judgements about effective practice. Evidence-based examples demonstrate the relationship between health promotion theory and pragmatic applications for nursing throughout. Each chapter includes an introduction, learning outcomes, and exercises, making this an essential book for all nursing students studying health promotion.

Professional Development I would highly recommend this book to any nurse or nursing student for its practical usefulness in any practice arena. It is a desirable reference for nurses who want access to pertinent health education information and resources at their fingertips. Score 97.5 Stars Doody's Medical Reviews. This addition to the Fast Facts series provides a succinct guide for nurses in adult health clinical settings and fills the need for an easy to use clinical reference that delivers a quick access reference on ways to incorporate wellness into their work helping to improve patient outcomes and throughout their daily lives helping to reduce personal and professional stress and improve their overall wellness. There currently is no clinical reference book that nurses can use for health promotion in general and health promotion for wellness in particular. Having such a reference is especially pertinent to nurses who learned about health promotion in academic nursing programs but did not learn about health promotion in the broader context of promoting wellness. Since Florence Nightingale nurses have considered health promotion interventions particularly patient education as an essential component of nursing care. Historically these interventions traditionally focused on physical health concerns such as nutrition exercise and fresh air and more recently on immunizations and screening for disease e.g. cancer diabetes hypertension and cardiovascular disease. Because health promotion has expanded to include wellness nurses now address issues related to broader aspects such as stress reduction body mind connectedness and self responsibility. At the same time that wellness has become an important focus of care health care providers increasingly are emphasizing cost effectiveness and use of advanced technology. As a result of these concurrent trends nurses experience high levels of job related stress and have less time to promote patient wellness as an integral part of their care even though they recognize its importance. In addition nurses increasingly recognize that job related pressures negatively affect them personally and they are looking for ways to incorporate wellness in their work and personal experiences. Fast Facts for Health Promotion for Wellness FF HP fills the need for an easy to use clinical reference that delivers a quick access reference on ways to incorporate wellness into their work and throughout their daily lives. This book Helps nurses understand wellness in the context of health promotion. Clearly defines wellness as it applies to the practice of nursing. Describes evidence based techniques that nurses can readily incorporate into their usual care to promote wellness for their patients. Provides easy to use assessment tools for identifying wellness related needs of patients. Provides easy to use tools for teaching patients about interventions to promote wellness. Provides evidence based information about complementary and alternative practices that nurses often address in patient care situations. Provides information about reliable resources for patient teaching and additional information about topics. Discusses ways in which nurses can achieve self wellness.
