Database Systems (DS-5) D.K. Hsiao,E.J. Neuhold,R. Sacks-Davis,2014-05-23 The proliferation of databases within organizations have made it imperative to allow effective sharing of information from these disparate database systems In addition it is desirable that the individual systems must maintain a certain degree of autonomy over their data in order to continue to provide for their existing applications and to support controlled access to their information Thus it becomes necessary to develop new techniques and build new functionality to interoperate these autonomous database systems and to integrate them into an overall information system Research into interoperable database systems has advanced substantially over recent years in response to this need The papers presented in this volume cover a wide spectrum of both theoretical and pragmatic issues related to the semantics of interoperable database systems Topics covered include techniques to support the translation between database schema and between database languages object oriented frameworks for supporting interoperability of heterogeneous databases knowledge base integration and techniques for overcoming schematic discrepancies in interoperable databases In addition there are papers addressing issues of security transaction processing data modelling and object identification in interoperable database systems It is hoped the publication will represent a valuable collective contribution to research and development in the field for database researchers implementors designers application builders and users alike **Engineering Federated Information Systems** Stefan Conrad,Ralf-Detlef

Kutsche,Wilhelm Hasselbring,2001 The aim of EFIS 2001 the fourth workshop in the sequence of the international workshops on engineering federated information systems is to intensify the exchange of ideas and experiences between academia and industrial practice EFIS 2001 was embedded as one part into the major event Information Federation Week Berlin 2001 including scientific and industrial workshops demos and discussions for the academic audience as well as for a broader of young and senior practitioners in industry and public services **Knowledge-Based Systems, Four-Volume**

Set Cornelius T. Leondes,2000-07-11 The design of knowledge systems is finding myriad applications from corporate databases to general decision support in areas as diverse as engineering manufacturing and other industrial processes medicine business and economics In engineering for example knowledge bases can be utilized for reliable electric power system operation In medicine they support complex diagnoses while in business they inform the process of strategic planning

Programmed securities trading and the defeat of chess champion Kasparov by IBM's Big Blue are two familiar examples of dedicated knowledge bases in combination with an expert system for decision making. With volumes covering Implementation, Optimization, Computer Techniques and Systems, and Applications, this comprehensive set constitutes a unique reference source for students, practitioners, and researchers in computer science, engineering, and the broad range of applications areas for knowledge-based systems.

Database and Expert Systems Applications Vladimir Marik, Werner Retschitzegger, 2003-08-21. This book constitutes the refereed proceedings of the 14th International Conference on Database and Expert Systems Applications DEXA 2003 held in Prague, Czech Republic, in September 2003. The 91 revised full papers presented together with an invited paper and a position paper were carefully reviewed and selected from 236 submissions. The papers are organized in topical sections on XML data modeling, spatial database systems, mobile computing, transactions, bioinformatics, information retrieval, multimedia databases, Web applications, ontologies, object-oriented databases, query optimization, workflow systems, knowledge engineering, and security.

Enterprise Information Systems V Olivier Camp, Joaquim Filipe, Slimane Hammoudi, Mario G. Piattini, 2006-02-27. This book comprises a set of papers selected from those presented at the fifth International Conference on Enterprise Information Systems ICEIS 2003 held in Angers, France, from 23 to 26 April 2003. The conference was organized by the Supérieure d'Électronique de l'Ouest ESEO of Angers, France, and the Escola Superior de Tecnologia of Setúbal, Portugal. Since its first edition in 1999, ICEIS focuses on real-world applications and aims at bringing together researchers, engineers, and practitioners interested in the advances and business applications of information systems. As in previous years, ICEIS 2003 held four simultaneous tracks covering different aspects of enterprise computing: Databases and Information Systems, Integration, Artificial Intelligence, and Decision Support Systems, Information Systems Analysis and Specification, and Software Agents and Internet Computing. Although ICEIS 2003 received 546 paper submissions from over 50 countries, only 80 were accepted as full papers and presented in 30 minutes oral presentations. With an acceptance rate of 15%, these numbers demonstrate the intention of preserving a high-quality forum for future editions of this conference. From the articles accepted as long papers for the conference, only 32 were selected for inclusion in this book. Additional keynote lectures, tutorials, and industrial sessions were also held during ICEIS 2003, and for the first time this year, the 1st Doctoral Consortium on Enterprise Information Systems gave PhD students an opportunity to present their work to an international audience of experts in the field of information systems.
