Analytic Methods In The Theory Of Differential And Pseudo-Differential Equations Of Parabolic Type Samuil D. Eidelman, Stepan D. Ivasyshen, Anatoly N. Kochubei, 2012-12-06 The theory of parabolic equations a well developed part of the contemporary partial differential equations and mathematical physics is the subject theory of of an immense research activity A continuing interest in parabolic equations is caused both by the depth and complexity of mathematical problems emerging here and by its importance in specific applied problems of natural science technology and economics This book aims at a consistent and as far as possible a complete exposition of analytic methods of constructing investigating and using fundamental solutions of the Cauchy problem for the following four classes of linear parabolic equations with coefficients depending on all variables 7 E

2b parabolic partial differential equations parabolic equations of a quasi-homogeneous structure in which every spatial variable may have its own weight with respect to the time variable
 E degenerate partial differential equations of Kolmogorov type
 3 structure which generalizes classical Kolmogorov equations of diffusion with inertia
 E3 pseudo differential equations with non-smooth quasi-homogeneous symbols
 E fractional diffusion equations
 4 These classes of equations generalize in various directions the classical equations and systems parabolic in the Petrovsky sense which were defined in 180 and studied in a number of monographs [83, 45, 146, 107, 76] and survey articles [102, 1, 215, 70, 46].
