Imagine the excitement surrounding the penicillin project and the subsequent rapid development of anti-infective agents that took place in the 1940s and 1950s. Fast forward to the world today and our ability to treat life threatening infections. This is but one small piece in the present kaleidoscope of new therapeutic agents. In fact, the world of science, biology and medicine is changing so quickly that it is

difficult for scientists and medical practitioners to stay abreast of their fields and confidently anticipate that their education and training will sustain them over a three to four decade career without considerable continuing education and training For the pharmaceutical scientist responsible for the discovery and development of therapeutic agents based on advances in biotechnology it is imperative to quickly come up to speed and stay at the forefront of developments which is no easy task for those not specifically trained in this area Biopharmaceutical Drug Design and Development edited by Susanna Wu Pong and Yongyut Rojanasakul cuts a potentially wide swath in terms of its intended audience It clearly is a primer for those not trained in the area or for those who wish to be brought into the mainstream of drug discovery and development in the world of biotechnology
