Science, Technology, And Policy Decisions Anne L. Hiskes, Richard P. Hiskes, 2019-07-09 This text written by a philosopher of science and a political theorist introduces students to the issues and controversies surrounding science and technology policy in the United States As the impact of technological advancement is increasingly felt the policy making process for science and technology is undergoing a marked transition The making of this policy is no longer solely the function of government agencies and institutions New actors in the policy arena are raising questions about the future of technological advancement in the United States and elsewhere and their voices are affecting sometimes obstructing the traditional policy process This book surveys the entire domain of science and technology policy making with special emphasis on the growing role of citizen participation the ethical issues raised by modern policy problems and the general principles that guide current policy The authors discuss current philosophical views about the nature of science and technology as social and political entities and also consider the history of the relations between these fields and political authority They combine an issues and case study approach with a narrative discussion of how ethical participatory and institutional factors have merged in the policy process Among the topics addressed are nuclear power and siting policy hazardous waste

communications technology and biomedical technology After reviewing the difficult problems facing the modern policy maker the authors assess the methods and ethical assumptions of the current policy making framework and consider alternatives that are more sensitive to the complexity of contemporary policy issues Intended as a core text for courses in Science Technology and Public Policy the book can also be used in interdisciplinary courses focusing on the relationship between science technology and society The text is also appropriate for courses in the philosophy of science and technology and for courses in social and political philosophy

### **Epistemology & Methodology III: Philosophy of Science and Technology**

**Part I: Formal and Physical Sciences** M. Bunge, 2012-12-06 The aims of this Introduction are to characterize the philosophy of science and technology henceforth PS T to locate it on the map of learning and to propose criteria for evaluating work in this field 1 THE CHASM BETWEEN S T AND THE HUMANITIES It has become commonplace to note that contemporary culture is split into two unrelated fields science and the rest to deplore this split and to do is some truth in the two cultures thesis and even nothing about it There greater truth in the statement that there are literally thousands of fields of knowledge each of them cultivated by specialists who are in most cases indifferent to what happens in the other fields But it is equally true that all fields of knowledge are united though in some cases by weak links forming the system of human knowledge Because of these links what advances remains stagnant or declines is the entire system of S T Throughout this book we shall distinguish the main fields of scientific and technological knowledge while at the same time noting the links that unite them

Ritterbush,2016-06-23 Science Technology and the Human Prospect contains the proceedings of the Edison Centennial Symposium Organized into three parts this book begins with the 10 essays commissioned from scholars and persons richly experienced in the management of technology Part I explores the costs and benefits of technology Part II addresses the adaption of the institutional frame of technology The last part discusses the human needs and future of invention *In Search of an Integrative Vision for Technology* Sytse Strijbos,Andrew Basden,2006-06-22 In Search Of An Integrative Vision For Technology will stimulate its readers to consider the whole story that is information systems within the context of an integrative vision of technology It integrates disparate areas of debate and research while appreciating the contribution that philosophy can make to such thinking It is deliberately broad in coverage and designed to provide useful pointers so that researchers students practitioners and developers can easily apply each point as needed Human issues of technology and their normative aspects is a theme that runs throughout the entire book The integrative vision is centered on an understanding of human practice the twin notions of structure and direction and the leading and the founding functions of such practice While this understanding applies to all technologies it is worked out in more detail for information technology From this philosophical understanding many interdisciplinary areas of interest are identified Science, Technology, and Society Sal P. Restivo,2005 Emphasizing an interdisciplinary and international coverage of the functions and effects of science and technology in society and culture Science Technology and Society B contains over 130 A to Z signed articles written by major scholars and experts from academic and scientific institutions and institutes worldwide Each article is accompanied by a selected bibliography Other features include extensive cross referencing throughout a directory of

contributors and an extensive topical index      *Science, Technology, and Society* Sal Restivo, 2005-05-19 Emphasizing an interdisciplinary and international coverage of the functions and effects of science and technology in society and culture Science Technology and Society contains over 130 A to Z signed articles written by major scholars and experts from academic and scientific institutions and institutes worldwide Each article is accompanied by a selected bibliography Other features include extensive cross referencing throughout a directory of contributors and an extensive topical index      **Ideas, Machines, and Values** Stephen H. Cutcliffe, 2000 Ideas Machines and Values is an introductory overview of the emergence of STS as a field of study as well as a portrait of its current interests and concerns The book examines the growth of STS from its birth in the mid 1960 s through its development as an interdisciplinary field to its present state Also addressed are the questions Why should we study STS and In what direction should STS be headed This work is highly recommended for anyone interested in building a solid foundation for Science Technology and Society Studies      Time for Science Education Michael Matthews, 2012-12-06 The book s argument depends as do most proposals in education upon cer tain positions in the philosophy of education I believe that education should be primarily concerned with developing understanding with initiation into worth while traditions of intellectual achievement and with developing capacities for clear analytic and critical thought These have been the long accepted goals of liberal education In a liberal education students should come to know and appreciate a variety of disciplines know them at an appropriate depth see the interconnectedness of the disciplines or the modes of thought and finally have some critical disposition toward what is being learned to be genuinely open minded about intellectual things These liberal goals are contrasted with goals such as professional training job preparation promotion of self esteem social engineering entertainment or countless other putative purposes of schooling that are enunciated by politicians administrators and educators The book s argument might be consistent with other views of education especially ones about the training of specialists sometimes called a professional view of education but the argument fits best with a liberal view of education The liberal hope has always been that if education is done well then other per sonal and social goods will follow The development of informed critical and moral capacities is the cornerstone for personal and social achievements
