**The Philosophy of Metacognition** Joëlle Proust, 2013-11-28 Does metacognition i.e. the capacity to form epistemic self evaluations about one's current cognitive performance derive from a mindreading capacity or does it rely at least in part on sui generis informational processes In *The Philosophy of Metacognition* Joëlle Proust provides a powerful defense of the second position Drawing on discussions of empirical evidence from comparative developmental and experimental psychology as well as from neuroscience and on conceptual analyses she purports to show that in contrast with analytic metacognition procedural metacognition does not need to involve metarepresentations Procedural metacognition seems to be available to some non humans some primates and rodents Proust further claims that metacognition is essentially related to mental agency i.e. cognitive control and monitoring Self probing is equivalent to a self addressed question about the feasibility of a mental action Am I able to remember this word Post evaluating is a way of asking oneself whether a given mental action has been successfully completed Is this word the one I was looking for Neither question need be articulated conceptually for a feeling of knowing or of being right to be generated or to drive epistemic control Various issues raised by the contrast of a procedural experience based metacognition with an analytic concept based metacognition are explored such as whether each is expressed in a different representational format their sensitivity to different epistemic norms and the existence of a variety of types of epistemic acceptance *The Blackwell Companion to Consciousness* Max Velmans, Susan Schneider, 2008-04-15 With fifty five peer reviewed chapters written by the leading authors in the field *The Blackwell Companion to Consciousness* is the most extensive and comprehensive survey of the study of consciousness available today Provides a variety of philosophical and scientific perspectives that create a breadth of understanding of the topic Topics include the origins and extent of consciousness different consciousness experiences such as meditation and drug induced states and the neuroscience of consciousness [Great Philosophical Objections to Artificial Intelligence](#) Eric Dietrich, Chris Fields, John P. Sullins, Bram Van Heuveln, Robin Zebrowski, 2021-01-14 Winner of the 2022 CHOICE Outstanding Academic Titles This book surveys and examines the most famous philosophical arguments against building a machine with human level intelligence From claims and counter claims about the ability to implement consciousness rationality and meaning to arguments about cognitive architecture the book presents a vivid history of the clash between the philosophy and AI Tellingly the AI Wars are mostly quiet now Explaining this crucial fact opens new paths to understanding the current resurgence AI especially deep learning AI and robotics what happens when philosophy meets science and the role of philosophy in the culture in which it is embedded Organising the arguments into four core topics Is AI possible Architectures of the Mind Mental Semantics and Mental Symbols and Rationality and Creativity this book shows the debate that played out between the philosophers on both sides of the question and as well the debate between philosophers and AI scientists and engineers building AI systems Up to date and forward looking the book is packed with fresh insights and supporting material including Accessible introductions to

each war explaining the background behind the main arguments against AI Each chapter details what happened in the AI wars the legacy of the attacks and what new controversies are on the horizon Extensive bibliography of key readings

**The Oxford Handbook of Philosophical Methodology** Herman Cappelen,Tamar Gendler,John P. Hawthorne,2016 This is the most comprehensive book ever published on philosophical methodology A team of thirty eight of the world s leading philosophers present original essays on various aspects of how philosophy should be and is done The first part is devoted to broad traditions and approaches to philosophical methodology including logical empiricism phenomenology and ordinary language philosophy The entries in the second part address topics in philosophical methodology such as intuitions conceptual analysis and transcendental arguments The third part of the book is devoted to essays about the interconnections between philosophy and neighbouring fields including those of mathematics psychology literature and film and neuroscience

**The Cambridge Handbook of Situated Cognition** Philip Robbins,Murat Aydede,2009 This book is a guide to a movement in cognitive science showing how environmental and bodily structure shapes cognition

[The Oxford Handbook of 4E Cognition](#) Albert Newen,Leon De Bruin,Shaun Gallagher,2018-08-23 4E cognition embodied embedded enactive and extended is a relatively young and thriving field of interdisciplinary research It assumes that cognition is shaped and structured by dynamic interactions between the brain body and both the physical and social environments With essays from leading scholars and researchers The Oxford Handbook of 4E Cognition investigates this recent paradigm It addresses the central issues of embodied cognition by focusing on recent trends such as Bayesian inference and predictive coding and presenting new insights such as the development of false belief understanding The Oxford Handbook of 4E Cognition also introduces new theoretical paradigms for understanding emotion and conceptualizing the interactions between cognition language and culture With an entire section dedicated to the application of 4E cognition in disciplines such as psychiatry and robotics and critical notes aimed at stimulating discussion this Oxford handbook is the definitive guide to 4E cognition Aimed at neuroscientists psychologists psychiatrists and philosophers The Oxford Handbook of 4E Cognition will be essential reading for anyone with an interest in this young and thriving field

*Consciousness and Emotion in Cognitive Science* Josefa Toribio,Andy Clark,1998-09-01 Summarizes and illuminates two decades of research Gathering important papers by both philosophers and scientists this collection illuminates the central themes that have arisen during the last two decades of work on the conceptual foundations of artificial intelligence and cognitive science Each volume begins with a comprehensive introduction that places the coverage in a broader perspective and links it with material in the companion volumes The collection is of interest in many disciplines including computer science linguistics biology information science psychology neuroscience iconography and philosophy Examines initial efforts and the latest controversies The topics covered range from the bedrock assumptions of the computational approach to understanding the mind to the more recent debates concerning cognitive architectures all the way to the latest developments in robotics artificial life and dynamical systems theory The

collection first examines the lineage of major research programs beginning with the basic idea of machine intelligence itself then focuses on specific aspects of thought and intelligence highlighting the much discussed issue of consciousness the equally important but less densely researched issue of emotional response and the more traditionally philosophical topic of language and meaning Provides a gamut of perspectives The editors have included several articles that challenge crucial elements of the familiar research program of cognitive science as well as important writings whose previous circulation has been limited Within each volume the papers are organized to reflect a variety of research programs and issues The substantive introductions that accompany each volume further organize the material and provide readers with a working sense of the issues and the connection between articles

The Making of Human Concepts Denis Mareschal, Paul C. Quinn, S. E. G. Lea, 2010 Human adults appear different from other animals in their ability to form abstract mental representations that go beyond perceptual similarity In short they can conceptualize the world This apparent uniqueness leads to an immediate puzzle WHEN and HOW does this abstract system come into being To answer this question we need to explore the origins of adult concepts both developmentally and phylogenetically When does the developing child acquire the ability to use abstract concepts Does the transition occur around 2 years with the onset of symbolic representation and language Or is it independent of the emergence of language When in evolutionary history did an abstract representational system emerge Is there something unique about the human brain How would a computational system operating on the basis of perceptual associations develop into a system operating on the basis of abstract relations Is this ability present in other species but masked by their inability to verbalise abstractions Perhaps the very notion of concepts is empty and should be done away with altogether This book tackles the age old puzzle of what might be unique about human concepts Intuitively we have a sense that our thoughts are somehow different from those of animals and young children such as infants Yet if true this raises the question of where and how this uniqueness arises What are the factors that have played out during the life course of the individual and over the evolution of humans that have contributed to the emergence of this apparently unique ability This volume brings together a collection of world specialists who have grappled with these questions from different perspectives to try to resolve the issue It includes contributions from leading psychologists neuroscientists child and infant specialists and animal cognition specialists Taken together this story leads to the idea that there is no unique ingredient in the emergence of human concepts but rather a powerful and potentially unique mix of biological abilities and personal and social history that has led to where the human mind now stands A must read for students and researchers in the cognitive sciences

**The MIT Encyclopedia of the Cognitive Sciences (MITECS)** Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition The MIT Encyclopedia of the Cognitive Sciences MITECS is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field At the core of the encyclopedia are 471 concise entries from

Acquisition and Adaptationism to Wundt and X bar Theory Each article written by a leading researcher in the field provides an accessible introduction to an important concept in the cognitive sciences as well as references or further readings Six extended essays which collectively serve as a roadmap to the articles provide overviews of each of six major areas of cognitive science Philosophy Psychology Neurosciences Computational Intelligence Linguistics and Language and Culture Cognition and Evolution For both students and researchers MITECS will be an indispensable guide to the current state of the cognitive sciences

**Philosophy of Language** Susana Nuccetelli, Gary Seay, 2007-12-24 This collection of classic and contemporary essays in philosophy of language offers a concise introduction to the field for students in graduate and upper division undergraduate courses It contains some of the most important basic sources in philosophy of language including a number of classic essays by philosophers such as Frege Russell Wittgenstein Kripke Grice Davidson Strawson Austin and Putnam as well as more recent contributions by scholars including John McDowell Stephen Neale Ruth Millikan Stephen Schiffer Paul Horwich and Anthony Brueckner among others who are on the leading edge of innovation in this increasingly influential area of philosophy The result is a lively mix of readings together with the editors discussions of the material which provides a rigorous introduction to the subject

Morphology, Neurogeometry, Semiotics Alessandro Sarti, 2024-06-03 Jean Petitot is a polyhedric thinker whose contributions has been fundamental in a number of disciplines such as epistemology morphodynamics differential geometry structural semiotics neurogeometry phenomenology linguistics cognitive grammars the theory of catastrophes social sciences literary studies and aesthetics This book is a homage to his huge contribution about the main concepts of morphogenesis and meaning that constitute the center of gravity around which Petitotian reflection revolves and returns The scientific path of Jean Petitot develops between these two poles topology and meaning At stake it was to challenge the hiatus separating the exact sciences from the humanities that was the main point of the Petitot seminar of EHESS Epistemology of Models By designing the appropriate qualitative dynamics between the two poles form and meaning it is possible to understand the Saussurian sign in structural semiotics or the Greimasian semiotic square for deep narrative structures or even the canonical formula of the myth of L vi Strauss in structural anthropology These are just few results in applying the theory of catastrophes to the emergence of meaning The book is a collection of testimonies by distinguished authors who worked extensively with Jean Petitot in the different fields of Mathematics Neurogeometry Semiotics Aesthetics and Epistemology An extensive bibliography of Petitot s work is also presented

**Philosophy of Computer Science** William J. Rapaport, 2023-01-16 A unique resource exploring the nature of computers and computing and their relationships to the world Philosophy of Computer Science is a university level textbook designed to guide readers through an array of topics at the intersection of philosophy and computer science Accessible to students from either discipline or complete beginners to both the text brings readers up to speed on a conversation about these issues so that they can read the literature for themselves form their own reasoned opinions and become part of the conversation by contributing

their own views Written by a highly qualified author in the field the book looks at some of the central questions in the philosophy of computer science including What is philosophy for readers who might be unfamiliar with it What is computer science and its relationship to science and to engineering What are computers computing algorithms and programs Includes a line by line reading of portions of Turing s classic 1936 paper that introduced Turing Machines as well as discussion of the Church Turing Computability Thesis and hypercomputation challenges to it How do computers and computation relate to the physical world What is artificial intelligence and should we build AIs Should we trust decisions made by computers A companion website contains annotated suggestions for further reading and an instructor s manual Philosophy of Computer Science is a must have for philosophy students computer scientists and general readers who want to think philosophically about computer science

*The Blackwell Companion to Consciousness* Susan Schneider,Max Velmans,2017-05-08 Updated and revised the highly anticipated second edition of The Blackwell Companion to Consciousness offers a collection of readings that together represent the most thorough and comprehensive survey of the nature of consciousness available today Features updates to scientific chapters reflecting the latest research in the field Includes 18 new theoretical empirical and methodological chapters covering integrated information theory renewed interest in panpsychism and more Covers a wide array of topics that include the origins and extent of consciousness various consciousness experiences such as meditation and drug induced states and the neuroscience of consciousness Presents 54 peer reviewed chapters written by leading experts in the study of consciousness from across a variety of academic disciplines

*New Thoughts About Old Things* Krista Lawlor,2001-01-29 This book defends a novel theory of singular concepts emphasizing the pragmatic requirements of singular concept possession and arguing that these requirements must be understood to institute traditions and policies of thought

**Indirect Reports and Pragmatics** Alessandro Capone,Ferenc Kiefer,Franco Lo Piparo,2015-12-01 This volume offers the reader a singular overview of current thinking on indirect reports The contributors are eminent researchers from the fields of philosophy of language theoretical linguistics and communication theory who answer questions on this important issue This exciting area of controversy has until now mostly been treated from the viewpoint of philosophy This volume adds the views from semantics conversation analysis and sociolinguistics Authors address matters such as the issue of semantic minimalism vs radical contextualism the attribution of responsibility for the modes of presentation associated with Noun Phrases and how to distinguish the indirect reporter s responsibility from the original speaker s responsibility They also explore the connection between indirect reporting and direct quoting Clearly indirect reporting has some bearing on the semantics pragmatics debate however there is much controversy on what is said whether this is a minimal semantic logical form enriched by saturating pronominals or a much richer and fully contextualized logical form This issue will be discussed from several angles Many of the authors are contextualists and the discussion brings out the need to take context into account when one deals with indirect reports both the context of the original utterance and the context of the report It is

interesting to see how rich cues and clues can radically transform the reported message assigning illocutionary force and how they can be mobilized to distinguish several voices in the utterance Decoupling the voice of the reporting speaker from that of the reported speaker on the basis of rich contextual clues is an important issue that pragmatic theory has to tackle Articles on the issue of slurs will bring new light to the issue of decoupling responsibility in indirect reporting while others are theoretically oriented and deal with deep problems in philosophy and epistemology

**Phenomenal Properties and the Intuition of Distinctness** Andrew Melnyk, 2024-12-13 This book investigates in unprecedented detail what David Papineau has called the intuition of distinctness its seeming to us when we attend introspectively to a phenomenal property of a current sensation that this property couldn't literally be an electro-chemical property of neural activity in a certain tiny region of our brain This book argues that the intuition of distinctness is no mere curiosity since it plausibly underlies much of the widespread feeling both inside and outside philosophy that phenomenal properties or qualia constitute an insuperable obstacle to physicalism or materialism about the mind It goes on to argue against the natural suggestion that this feeling is warranted because the intuition of distinctness somehow gives us genuine reason to reject physicalism about phenomenal properties and to adopt property dualism instead it argues that there is no plausible way in which it could The volume develops a positive view of what phenomenal properties are defending an unorthodox version of representationalism and sketching accounts of what makes our introspective knowledge of phenomenal properties special how introspection could tell us that an introspected property is physical and what the subjectivity of phenomenal properties could be The volume critically surveys previous attempts to explain consistently with physicalism how the intuition of distinctness arises in us Finally it elaborates an explanation of the intuition of distinctness

*Passions and Projections* Robert N. Johnson, Michael Smith, 2015-01-08 This volume presents fourteen original essays which explore the philosophy of Simon Blackburn one of the UK's most influential contemporary philosophers Blackburn is best known to the general public for his attempts to make philosophy accessible to those with little or no formal training but in professional circles his reputation is based on a lifetime pursuit of his distinctive version of a projectivist and anti-realist research program As he sees things we must always try first to understand and explain what we are doing when we think and talk as we do This research program reaches into nearly all of the main areas of philosophy metaphysics epistemology philosophy of mind moral philosophy and moral psychology The books and articles he has written provide us with perhaps the most comprehensive statement and defense of projectivism and anti-realism since Hume The essays collected here document the range and influence of Blackburn's work They reveal among other things the resourcefulness of his distinctive brand of philosophical pragmatism

**Mental Causation** Anthony Dardis, 2008 Two thousand years ago Lucretius said that everything is atoms in the void it's physics all the way down Contemporary physicalism agrees But if that's so how can we how can our thoughts emotions our values make anything happen in the physical world This conceptual knot the mental causation problem is the core of the mind-body problem closely

connected to the problems of free will consciousness and intentionality Anthony Dardis shows how to unravel the knot He traces its early appearance in the history of philosophical inquiry specifically in the work of Plato Aristotle Descartes and T H Huxley He then develops a metaphysical framework for a theory of causation laws of nature and the causal relevance of properties Using this framework Dardis explains how macro or higher level properties can be causally relevant in the same way that microphysical properties are causally relevant by their relationship with the laws of nature Smelling an orange choosing the orange rather than the cheesecake reaching for the one on the left instead of the one on the right mental properties such as these take their place alongside the physical motor of the world in making things happen *The Turing Test* James H. Moor,2012-12-06 In 1950 Alan Turing 1912 1954 published his famous article Computing Machinery and Intelligence in the journal Mind This article is arguably the most influential and widely read article in the philosophy of artificial intelligence Indeed most of the debate in the philosophy of artificial intelligence over the last fifty years concerns issues that were raised and discussed by Turing Turing s genius was not only in developing the theory of computability but also in understanding the impact both practical and philosophical that computing machinery would have Turing believed that computers if properly designed and educated could exhibit intelligent behavior even behavior that would be indistinguishable from human intelligent behavior His vision of the possibility of machine intelligence has been highly inspiring and extremely controversial In this classic article Turing presented his well known imitation game and predicted that about the year 2000 an average interrogator will not have more than 70 per cent chance of making the right identification after five minutes of questioning in the imitation game Based on the results of the Loebner 2000 contest and the accomplishments in the field of AI as impressive as they are Turing s prediction remains unfulfilled [A Unified Treatment of Moore's Paradox](#) John N. Williams,2023-03-24 A Unified Treatment of Moore s Paradox is the culmination of a decades long engagement with Moore s paradox by the world s leading authority on the subject the late John Williams The book offers a comprehensive account of Moore s paradox in thought and speech both in its commissive and omissive forms Williams argues that Moorean absurdity comes in degrees and shows that contrary to one tradition in the literature on Moore s Paradox we cannot explain Moorean absurdity in speech in terms of Moorean absurdity in thought but must account for each form of absurdity in its own terms Williams also explores the extent to which Moore s paradox may arise for attitudes other than belief such as desire Written with Williams trademark clarity and wit the book is packed with arguments bearing on a wide range of topics in epistemology the philosophy of language and the philosophy of mind
