Whose Science? Whose Knowledge? Sandra G. Harding, 2016-12-01 Sandra Harding here develops further the themes first addressed in her widely influential book *The Science Question in Feminism* and conducts a compelling analysis of feminist theories on the philosophical problem of how we know what we know Following a strong narrative line Harding sets out her arguments in highly readable prose In Part 1 she discusses issues that will interest anyone concerned with the social bases of scientific knowledge In Part 2 she modifies some of her views and then pursues the many issues raised by the feminist position which holds that women's social experience provides a unique vantage point for discovering masculine bias and questioning conventional claims about nature and social life In Part 3 Harding looks at the insights that people of color male feminists lesbians and others can bring to these controversies and concludes by outlining a feminist approach to science in which these insights are central Women and men cannot understand or explain the world we live in or the real choices we have she writes as long as the sciences describe and explain the world primarily from the perspectives of the lives of the dominant groups Harding's is a richly informed radical voice that boldly confronts issues of crucial importance to the future of many academic disciplines Her book will amply reward readers looking to achieve a more fruitful understanding of the relations between feminism science and social life

Objectivity in the Feminist Philosophy of Science Karen Cordrick Haely, 2003 Abstract According to a familiar though naive conception science is a rigorously neutral enterprise free from social and cultural influence but more sophisticated philosophical views about science have revealed that social and cultural are ubiquitous in scientific practice and thus ought not be ignored when attempting to understand describe and prescribe proper behavior for the practice of science Indeed many theorists have argued that social and cultural values and interests must be present in science and knowledge gathering in general in order to make sense of the world The concept of objectivity has been utilized in the philosophy of science as well as in epistemology as a way to discuss and explore the various types of social and cultural influence that operate in science The concept has also served as the focus of debates about just how much neutrality we can or should expect in science This thesis examines feminist ideas regarding how to revise and enrich the concept of objectivity and how these suggestions help achieve both feminist and scientific goals Feminists offer us warnings about idealized concepts of objectivity and suggest that power can play a crucial role in determining which research programs get labeled objective In addition the
