text in undergraduate and graduate courses **Topics in the Philosophy of Biology** Marjorie Grene, Everett Mendelsohn, 2012-12-06 The philosophy of biology should move to the center of the philosophy of science a place it has not been accorded since the time of Mach Physics was the paradigm of science and its shadow falls across contemporary philosophy of biology as well in a variety of contexts reduction organization and system biochemical mechanism and the models of law and explanation which derive from the Duhem Popper Hempel tradition This volume we think offers ample evidence of how good contemporary work in the philosophical understanding of biology has become Marjorie Grene and Everett Mendelsohn aptly combine a deep philosophical appreciation of conceptual issues in biology with an historical understanding of the radical changes in the science of biology since the 19th century In this book they present essays which probe such historical and methodological questions as reducibility levels of organization function and teleology and the range of issues emerging from evolutionary theory and the species problem In conjunction with Professor Grene's collection of essays on the philosophy of biology *The Understanding of Nature* Boston Studies in the Philosophy of Science Vol XXIII and the occasional essays on these topics which we have published in other volumes listed below this volume contributes to bringing biology to the center of philosophical attention Everett Mendelsohn *Explanation in Nineteenth Century Biology* Boston Studies Vol II 1965 David Hawkins *Taxonomy and Information* Boston Studies Vol III 1967 *Philosophy of Biology* Brian Garvey, 2014-12-05 This major new series in the philosophy of science aims to provide a new generation of textbooks for the subject The series will not only offer fresh treatments of core topics in the theory and methodology of scientific knowledge but also introductions to newer areas of the discipline Furthermore the series will cover topics in current science that raise significant foundational issues both for scientific theory and for philosophy more generally Biology raises distinct questions of its own not only for philosophy of science but for metaphysics epistemology and ethics This comprehensive new textbook for a rapidly growing field of study provides students new to the subject with an up to date presentation of the key philosophical issues Care is taken throughout to keep the technicalities accessible to the non biologist but without sacrificing the philosophical subtleties The first part of the book covers the philosophical challenges posed by evolution and evolutionary biology beginning with Darwin's central argument in the *Origin of the Species* Individual chapters cover natural selection the selfish gene alternative units of selection developmental systems theory adaptationism and issues in macroevolution The second part of the book examines philosophical questions arising in connection with biological traits function nature and nurture and biological kinds The third part of the book examines metaphysical questions biology's relation with the traditional concerns of philosophy of science and how evolution has been introduced into epistemological debates The final part considers the relevance of biology to questions about ethics religion and human nature Thinking about Life Paul S. Agutter, Denys N. Wheatley, 2008-11-05 Our previous book *About Life* concerned modern biology We used our present day understanding of cells to define the living state providing a basis for exploring several general interest topics the origin of life

extraterrestrial life intelligence and the possibility that humans are unique The ideas we proposed in *About Life* were intended as starting points for debate we did not claim them as truth but the information on which they were based is currently accepted as scientific fact What does that mean What is scientific fact and why is it accepted What is science and is biology like other sciences such as physics except in subject matter The book you are now reading investigates these questions and some related ones Like *About Life* it may particularly interest a reader who wishes to change career to biology and its related subdisciplines In line with a recommendation by the British Association for the Advancement of Science that the public should be given fuller information about the nature of science we present the concepts underpinning biology and a survey of its historical and philosophical basis

Processes of Life John Dupré, 2012 John Dupré explores recent revolutionary developments in biology and considers their relevance for our understanding of human nature and society He reveals how the advance of genetic science is changing our view of the constituents of life and shows how an understanding of microbiology will overturn standard assumptions about the living world

Philosophy of Biology Alex Rosenberg, Daniel W. McShea, 2007-12-19 Is life a purely physical process What is human nature Which of our traits is essential to us In this volume Daniel McShea and Alex Rosenberg a biologist and a philosopher respectively join forces to create a new gateway to the philosophy of biology making the major issues accessible and relevant to biologists and philosophers alike Exploring concepts such as supervenience the controversies about genocentrism and genetic determinism and the debate about major transitions central to contemporary thinking about macroevolution the authors lay out the broad terms in which we should assess the impact of biology on human capacities social institutions and ethical values

Philosophy of Biology, 2007 Biology raises distinct questions of its own not only for philosophy of science but for metaphysics epistemology and ethics This comprehensive new introduction to a growing field of study provides readers new to the subject with an up to date presentation of the key philosophical issues

The Philosophy of Biology Marjorie Grene, David Depew, 2004-08-02 Does life for the living differ from that of the non living If so how And how in that case does biology as the study of living things differ from other sciences These questions are examined through an exploration of episodes in the history of biology and philosophy

Life and Mind José Manuel Viejo, Mariano Sanjuán, 2023-06-12 This volume provides a broad overview of some cutting edge philosophical topics of growing interest at the juncture between cognitive science and biology The main goal is not to integrate the variety of approaches into a single account but rather to offer diverse perspectives on a collection of selected biological issues of particular philosophical relevance reflecting the plurality of current research in these areas Four conceptual vectors give this volume its coherence Animal and human cognition With respect to animal cognition this volume focuses on self awareness and methodological flaws in the science of animal consciousness Regarding human cognition the authors of this volume address various aspects of so called 4E cognition Genetics The role of genes in the development of mind and life has always been philosophically controversial In this volume the authors address the possibility of considering

post genomic genes as natural kinds and the proper analysis of the concept of genotype Teleology This volume addresses issues of evolutionary causality and teleosemantics as well as questions relating to biological teleology and regulation Evolution Evolution exemplifies better than any other concept the convergence point between philosophy biology and cognitive sciences Among other things the volume deals with the origin of novelties in evolutionary processes from various viewpoints e g cultural evolution and developmental plasticity Despite their disparity all these topics belong to a common naturalistic framework By presenting them in a single volume the editors want to emphasize the need to always conduct philosophical research on mind and life with tangential domains in mind This book is a valuable resource for students and researchers of philosophy with a special interest in life cognition and evolution as well as for biologists and cognitive scientists

Life and Evolution Lorenzo Baravalle, Luciana Zaterka, 2020-04-10 This book offers to the international reader a collection of original articles of some of the most skillful historians and philosophers of biology currently working in Latin American universities During the last decades increasing attention has been paid in Latin America to the history and philosophy of biology but since many local authors prefer to write in Spanish or in Portuguese their ideas have barely crossed the boundaries of the continent This volume aims to remedy this state of things providing a good sample of this production to the English speaking readers bringing together contributions from researchers working in Brazilian Argentinean Chilean Colombian and Mexican universities The stress on the regional provenance of the authors is not intended to suggest the existence of something like a Latin American history and philosophy of biology supposedly endowed with distinctive features On the contrary the editors firmly believe that advances in this field can be achieved only by stimulating the integration in the international debate Based on this assumption the book focuses on two topics life and evolution and presents a selection of contributions addressing issues such as the history of the concept of life the philosophical reflection on life manipulation and life extension the structure and development of evolutionary theory as well as human evolution Life and Evolution Latin American Essays on the History and Philosophy of Biology will provide the international reader with a rather complete picture of the ongoing research in the history and philosophy of biology in Latin America offering a snapshot of this dynamic community It will also contribute to contextualize and develop the debate concerning life and evolution and the relation between the two phenomena
