Philosophy Of Science And Technology Studies:

The Philosophy of Science and Technology Studies Steve Fuller, 2006 First Published in 2006 Routledge is an imprint of Taylor Francis an informa company **Contributions to a Philosophy of Technology** F. Rapp, 1974-10-31 The highly sophisticated techniques of modern engineering are normally conceived of in practical terms Corresponding to the instrumental function of technology they are designed to direct the forces of nature according to human purposes Yet as soon as the realm of mere skills is exceeded the intended useful results can only be achieved through planned and preconceived action processes involving the deliberately considered application of well designed tools and devices This is to say that in all complex cases theoretical reasoning becomes an indispensable means to accomplish the pragmatic technological aims Hence the abstracting from the actual concrete function of technology opens the way to concentrate attention on the general conceptual framework involved If this approach is adopted the relevant knowledge and the procedures applied clearly exhibit a logic of their own This point of view leads to a methodological and even an epistemological analysis of the theoretical structure and the specific methods of procedure characteristic of modern technology Investigations of this kind that can be described as belonging to an analytical philosophy of technology form the topic of this anthology The type of research in question here is closely akin to that of the philosophy of science But it is an astonishing fact that the commonly accepted and carefully investigated philosophy of science has not yet found its counterpart in an established philosophy of technology

Philosophy, Rhetoric, and the End of Knowledge Steve Fuller, 2001-06-01 **Philosophy, Rhetoric, and the End of Knowledge** Steve Fuller, James H. Collier, 2003-12-08 In this second edition of Steve Fuller's original work *Philosophy Rhetoric and the End of Knowledge A New Beginning for Science and Technology Studies* James Collier joins Fuller in developing an updated and accessible version of Fuller's classic volume The new edition shifts focus slightly to balance the discussions of theory and practice and the writing style is oriented to advanced students It addresses the contemporary problems of knowledge to develop the basis for a more publicly accountable science The resources of social epistemology are deployed to provide a positive agenda of research teaching and political action designed to bring out the best in both the ancient discipline of rhetoric and the emerging field of science and technology studies STS The authors reclaim and integrate STS and rhetoric to explore the problems of knowledge as a social process problems of increasing public interest that extend beyond traditional disciplinary resources In so doing the differences among disciplines must be questioned the exercise of STS and the disciplinary boundaries must be renegotiated the exercise of rhetoric This book innovatively integrates a sophisticated theoretical approach to the social processes of creating knowledge with a developing pedagogical apparatus The thought questions at the end of each chapter the postscript and the appendix allow the reader to actively engage the text in order to discuss and apply its theoretical insights Creating new standards for interdisciplinary scholarship and communication the authors bring numerous disciplines into conversation in formulating a new kind of rhetoric geared toward

greater democratic participation in the knowledge making process This volume is intended for students and scholars in rhetoric of science science studies philosophy and communication and will be of interest in English sociology and knowledge management arenas as well

Science, Technology and Society Wenceslao J. González, 2005 The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values cultural political economic of science and technology Wenceslao J Gonzalez is professor of logic and philosophy of science at the University of A Coruña Spain He has been vicedean of the School of Humanities and president of the Committee of Doctoral Programs at the University He has been a visiting researcher at the Universities of St Andrews Münster and London London School of Economics as well as Visiting fellow at the Center for Philosophy of Science University of Pittsburgh He has given lectures at the Universities of Pittsburgh Stanford Quebec and Helsinki The conferences in which he has participated include those organized by the Universities of Uppsala New South Wales Bologna and Canterbury New Zealand He has edited 20 volumes and published 70 papers He is the editor of the monographic issues

Handbook of Science and Technology Studies Sheila Jasanoff, Gerald E. Markle, James C. Peterson, Trevor Pinch, 2001-11-01

This volume represents the social constructivist turn of the field. It is evident that social constructivism made a major impact on the field during the 1970s and 1980s. The diverse papers included here highlight the role of ethnography in STS. In addition, we are exposed to new perspectives of the multicultural and gendered nature of knowledge production. Science, Technology, and Society. For the most current comprehensive resource in this rapidly evolving field, look no further than the Revised Edition of the Handbook of Science and Technology Studies. This masterful volume is the first resource in more than 15 years to define, summarize, and synthesize this complex multidisciplinary international field. Tightly edited with contributions by an internationally recognized team of leading scholars, this volume addresses the crucial contemporary issues both traditional and nonconventional social studies, political studies, and humanistic studies in this changing field. It is a rich and valuable guide to much that is transpiring in the field of Science and Technology Studies. In the editors' words, it is an unconventional but arresting atlas of the field at a particular moment in its history. Science Technology Society. This book is not only an important resource for practitioners but it also may help to spark the curiosity of those who are outside the field, including scientists and engineers themselves, and so pull the half-seen world of science and technology studies even more fully into the light of day. American Scientist. The book as a whole is an impressive testimony to the vitality of a burgeoning field. New Scientist. It reflects the international and interdisciplinary nature of the society. An excellent resource. Choice.

An Introduction to Science Studies John M. Ziman, 1987-07-23. The purpose of this book is to give a coherent account of the different perspectives on science and technology that are normally studied under various disciplinary heads such as philosophy of science, sociology of science, and science policy. It is intended for students embarking on courses in these subjects and assumes no special knowledge of any science. It is written in a direct and simple style, and technical language is introduced very sparingly. As various perspectives are sketched out in this book, the reader moves towards a consistent conception of

contemporary science as a rapidly changing social institution that has already grown out of its traditional forms and plays a central role in society at large It will appeal to students in a wide range of scientific disciplines and complement well Professor Ziman's earlier books

Objectivity in Science Flavia Padovani, Alan Richardson, Jonathan Y. Tsou, 2015-03-23 This highly multidisciplinary collection discusses an increasingly important topic among scholars in science and technology studies objectivity in science It features eleven essays on scientific objectivity from a variety of perspectives including philosophy of science history of science and feminist philosophy Topics addressed in the book include the nature and value of scientific objectivity the history of objectivity and objectivity in scientific journals and communities Taken individually the essays supply new methodological tools for theorizing what is valuable in the pursuit of objective knowledge and for investigating its history The essays offer many starting points while suggesting new avenues of research Taken collectively the essays exemplify the very virtues of objectivity that they theorize in reading them together the reader can sense various anxieties about the dangerously subjective in our age and locate commonalities of concern as well as differences of approach As a result the volume offers an expansive vision of a research community seeking a communal understanding of its own methods and its own epistemic anxieties struggling to enunciate the key problems of knowledge of our time and offer insight into how to overcome them

New Frontiers in Science and Technology Studies Steve Fuller, 2013-04-24 Steve Fuller has a reputation for setting the terms of debate within science and technology studies In his latest book *New Frontiers in Science and Technology Studies* he charts the debates likely to be of relevance in the coming years Should science and technology be treated as separate entities What impact has globalization had on science and technology Can science be clearly distinguished from other forms of knowledge Does the politicization of science really matter Is there a role for the social regulation of scientific inquiry Should we be worried about research fraud These questions are explored by examining an array of historical philosophical and contemporary sources Attention is paid for example to the Bruno Latour's *The Politics of Nature* as a model for science policy as well as the global controversy surrounding Bjorn Lomborg's *The Sceptical Environmentalist* which led to the dismantling and re-establishment of the Danish national research ethics board *New Frontiers in Science and Technology Studies* will appeal strongly to scholars and advanced undergraduate and graduate students in courses concerned with the social dimensions of science and technology and anyone who cares about the future of science

The World of Dual-Brain Weizhi Zhang, 2022-08-21 This book leaves the template of the inertia of natural human society and traditional

ideological thinking to illustrate the mechanism of the generation of the Sociality Brain and to explore the construction path of the human computer symbiosis order At the same time this book proposes concepts including wisdom sharing system the Sociality Brain dual brain world off site economic civilization basic contradictions in the intelligent world and class analysis and division of the dual brain world etc This is a philosophical thinking about the intelligent world beyond the categories of natural human society and biological brain

The Sociology of Intellectual Life Steve Fuller, 2009-08-18 The Sociology of Intellectual Life outlines a social theory of knowledge for the 21st century With characteristic subtlety and verve Steve Fuller deals directly with a world in which it is no longer taken for granted that universities and academics are the best places and people to embody the life of the mind While Fuller defends academic privilege he takes very seriously the historic divergences between academics and intellectuals attending especially to the different features of knowledge production that they value The book's features include an account of the problematic relationship between postmodernism and the university as an institution the problems facing an academic who wishes also to function as an intellectual a critical survey of the emerging fields of social epistemology and the sociology of philosophy a discussion of the ethics and politics of public intellectual life especially given its largely improvisational or as Fuller himself terms it bullshit character

Science Transformed? Alfred Nordmann, Hans Radder, Gregor Schiemann, 2014-08-10 Advancements in computing instrumentation robotics digital imaging and simulation modeling have changed science into a technology driven institution Government industry and society increasingly exert their influence over science raising questions of values and objectivity These and other profound changes have led many to speculate that we are in the midst of an epochal break in scientific history This edited volume presents an in depth examination of these issues from philosophical historical social and cultural perspectives It offers arguments both for and against the epochal break thesis in light of historical antecedents Contributors discuss topics such as science as a continuing epistemological enterprise the decline of the individual scientist and the rise of communities the intertwining of scientific and technological needs links to prior practices and ways of thinking the alleged divide between mode 1 and mode 2 research methods the commodification of university science and the shift from the scientific to a technological enterprise Additionally they examine the epochal break thesis using specific examples including the transition from laboratory to real world experiments the increased reliance on computer imaging how analog and digital technologies condition behaviors that shape the object and beholder the cultural significance of humanoid robots the erosion of scientific quality in experimentation and the effect of computers on prediction at the expense of explanation Whether these events represent a historic break in scientific theory practice and methodology is disputed What they do offer is an important occasion for philosophical analysis of the epistemic institutional and moral questions affecting current and future scientific pursuits
