Phonology And Morphology Of Reduplication:

The Phonology and Morphology of Reduplication Eric Raimy, 2012-10-25 This book proposes a new representational analysis of reduplication based on making explicit precedence relations in phonological representations The main claim is that reduplication results from loops in the precedence structure of phonological representations Modular rule based analyses of overapplication and underapplication effects including backcopying are presented to argue against the McCarthy and Prince 1995 claim that a derivational model of reduplication is conceptually and empirically inadequate Other sections of the book discuss the implications of explicit precedence information for the concatenation of morphemes the analysis of infixation and templates in reduplication Analyses of relevant phenomena from Indonesian Tohono Oodham Chaha Chumash and Nancowry among other languages are provided

Reduplication Sharon Inkelas, Cheryl Zoll, 2005-02-24 This groundbreaking new study takes a novel approach to reduplication a phenomenon whereby languages use repetition to create new words Sharon Inkelas and Cheryl Zoll argue that the driving force in reduplication is identity at the morphosyntactic not the phonological level and present a new model of reduplication Morphological Doubling Theory that derives the full range of reduplication patterns This approach shifts the focus away from the relatively small number of cases of phonological overapplication and underapplication which have played a major role in earlier studies to the larger class of cases where base and reduplicant diverge phonologically The authors conclude by arguing for a theoretical shift in phonology which entails more attention to word structure As well as presenting the authors pioneering work this book also provides a much needed overview of reduplication the study of which has become one of the most contentious in modern phonological theory

The Interplay of Morphology and Phonology Sharon Inkelas, 2014-10-31 This book presents a phenomenon oriented survey of the interaction between phonology and morphology It examines the ways in which morphology i e word formation demonstrates sensitivity to phonological information and how phonological patterns can be sensitive to morphology Chapters focus on morphologically conditioned phonology process morphology prosodic templates reduplication infixation phonology morphology interleaving effects prosodic morphological mismatches ineffability and other cases of phonology morphology interaction The overview discusses the relevance of a variety of phenomena for theoretical issues in the field These include the debate over item based vs realizational approaches to morphology the question of whether cyclic effects can be subsumed under paradigmatic effects whether reduplication is phonological copying or morphological doubling whether infixation and suppletive allomorphy are phonologically optimizing and more The book is intended to be used in graduate or advanced undergraduate courses or as a reference for those pursuing individual topics in the phonology morphology interface

Reduplication Sharon Inkelas, 2005 This groundbreaking new study takes a novel approach to reduplication a phenomenon whereby languages use repetition to create new words Sharon Inkelas and Cheryl Zoll argue that the driving force in reduplication is identity at the morphosyntactic not the phonological level and present a new model

of reduplication Morphological Doubling Theory that derives the full range of reduplication patterns This approach shifts the focus away from the relatively small number of cases of phonological overapplication and underapplication which have played a major role in earlier studies to the larger class of cases where base and reduplicant diverge phonologically The authors conclude by arguing for a theoretical shift in phonology which entails more attention to word structure As well as presenting the authors pioneering work this book also provides a much needed overview of reduplication the study of which has become one of the most contentious in modern phonological theory *Morphology at the Interfaces* Jason D.

Haugen,2008 This monograph addresses morphology and its interfaces with phonology and syntax by examining comparative data from the Uto Aztecan language family and analyses involving reduplication as well as noun incorporation and related derivational morphology are provided within the framework of Distributed Morphology Reduplication is treated by analyzing reduplicative morphemes reduplicants as morphological pieces Vocabulary Items inserted into syntactic slots at

Morphological Structure Noun incorporation constructions are analyzed as involving either incorporation head movement in syntax a la Baker 1988 or conflation involving direct merger of a nominal root into verbal position a la Hale and Keyser 2002 It is argued that denominal verb constructions should be treated as a sub case of NI as in Hale and Keyser 1993 Finally the historical development of the polysynthesis parameter in Nahuatl is discussed and a reconstruction of the likely stages of development each of which is attested elsewhere in the family is presented **Studies on Reduplication** Bernhard

Hurch,2011-12-22 For several reasons mostly inherent to the different developments of generative grammar an increasing number of publications have dealt with reduplication in the past 20 years Reduplication lends itself perfectly as a test field for theories that opt for a non segmental organization of phonology and morphology As it happens frequently then the discussion centers around a rather small set of data for which alternative analysis are offered and which themselves are intended to contribute to the foundation of new theoretical developments The present volume which goes back to a conference on reduplication at the University of Graz Austria offers a broader approach to reduplication not only from different theoretical viewpoints but especially for its phenomenology Across theories a number of highly qualified authors deal with formal and functional perspectives with typological properties with semantics comparative issues the role of reduplication in language acquisition the acquisition of reduplicative systems sign languages creoles and pidgins general grammatical and cognitive principles the picture is completed by a series of language or language family specific studies as on Uto Aztecan Salish Tupi Guarani Moroccan and Cairene Arabic various African languages Chinese Turkish Indo European languages from India etc The overall scope of the conference was to contribute to a new level of discussion of the phenomenon across theories and across specializations and interests Update on Contributor s addresses PDF **Phonology**

Morphological Metatheory Daniel Siddiqi, Heidi Harley, 2016-06-29 The field of morphology is particularly heterogeneous Investigators differ on key points at every level of theory These divisions are not minor issues about technical implementation but rather are foundational issues that mold the underlying anatomy of any theory The field has developed very rapidly both theoretically and methodologically giving rise to many competing theories and varied hypotheses Many drastically different and often contradictory models and foundational hypotheses have been proposed Theories diverge with respect to everything from foundational architectural assumptions to the specific combinatorial mechanisms used to derive complex words Today these distinct models of word formation largely exist in parallel mostly without proponents confronting or discussing these differences in any major forum After forty years of fast paced growth in the field morphologists are in need of a moment to take a breath and survey the drastically different points of view within the field This volume provides such a moment

The Routledge Handbook of North American Languages Daniel Siddiqi, Michael Barrie, Carrie Gillon, Jason Haugen, Eric Mathieu, 2019-09-25 The Routledge Handbook of North American Languages is a one stop reference for linguists on those topics that come up the most frequently in the study of the languages of North America including Mexico This handbook compiles a list of contributors from across many different theories and at different stages of their careers all of whom are well known experts in North American languages The volume comprises two distinct parts the first surveys some of the phenomena most frequently discussed in the study of North American languages and the second surveys some of the most frequently discussed language families of North America The consistent goal of each contribution is to couch the content of the chapter in contemporary theory so that the information is maximally relevant and accessible for a wide range of audiences including graduate students and young new scholars and even senior scholars who are looking for a crash course in the topics Empirically driven chapters provide fundamental knowledge needed to participate in contemporary theoretical discussions of these languages making this handbook an indispensable resource for linguistics scholars

The Oxford Handbook of Morphological Theory Jenny Audring, Francesca Masini, 2019 This volume is the first handbook devoted entirely to the multitude of frameworks adopted in the field of morphology It offers critical discussions of the main

phonologists goes to the heart of current debates in phonological and linguistic theory should the explanation of phonological variety be constraint or rule based and in the light of the resolution of this question how in the mind does phonology interface with other components of the grammar The book includes contributions from leading proponents of both sides of the argument and an extensive introduction setting out the history nature and more general linguistic implications of current phonological theory

Reduplication in Klallam Anne C. Crawford, 2015 Klallam Salishan makes extensive use of reduplication a morphological process in which a base is copied in part or in whole and then attached to that base in order to give it either grammatical inflection or a new derivational meaning As is the case with many morphological processes reduplication is also conditioned by phonology and cross linguistic markedness constraints influencing everything from what is available as the base in partial reduplication to reduplicated surface forms that do not demonstrate a simple copy and attach procedure This study first outlines those phonological patterns in Klallam that are particularly relevant to reduplication processes including the description of two epenthetic processes not currently described in the literature Using Montler's Klallam Dictionary 2012 as a source of data and his Klallam Grammar 2015 as a source for some of the basic explanations of reduplicative processes it then extends these descriptions In the end this study refines understanding of the description for four of the eight total processes adds allomorphs for two more processes and adds a description for one of the eight processes that was previously undescribed the Distributive It also adds a description of multiple reduplication in Klallam for the first time In all of these an extensive discussion of the interplay between phonological processes and morphological processes is given showing the interconnectedness of these two linguistic systems This in depth study of reduplication in Klallam reveals that while the reduplicants are generally unmarked in shape marked shapes are allowed in certain environments Finally suggestions for further research are offered such as investigations into both the occurrence of and possible motivations for marked shapes in Klallam reduplicants possible areal effects in the Northwest Coast linguistic area and the documentation of New Klallam as the language is now no longer spoken as a first language but is exclusively learned as a second language
