Sanzone, 2012-10-05 More than 50 years ago in 1934 Chadwick and Goldhaber ChG 34 published a paper entitled A Nuclear Photo effect Disintegration of the Dipion by γ Rays I in the introduction They noted By analogy with the excitation and ionisation of atoms by light one might expect that any complex nucleus should be excited or ionised that is disintegrated by γ rays of suitable energy and furthermore Heavy hydrogen was chosen as the element first to be examined because the dipion has a small mass defect and also because it is the simplest of all nuclear systems and its properties are as important in nuclear theory as the hydrogen is in atomic theory Almost at the same time in 1935 the first theoretical paper on the photodisintegration of the deuteron entitled Quantum theory of the dipion by Bethe and Peierls BeP 35 appeared It is not without significance that these two papers mark the beginning of photonuclear physics in general and emphasize in particular the special role the two body system has played in nuclear physics since then and still plays A steady flow of experimental and theoretical papers on deuteron photo disintegration and its inverse reaction n p capture shows the continuing interest in this fundamental process see fig 1 1 **Nuclear Photo-disintegration** Joseph S. Photopion Nuclear Physics P. Stoler, 2012-12-06 This volume consists of twelve review articles and a variety of short contributions which are based on lectures presented at the International Symposium on Photopion Nuclear Physics The review articles were submitted after the symposium and there was considerable editing and cross referencing with the aim of achieving a greater overall unity than ordinarily found in conference proceedings Photopion Nuclear Physics as the name suggests combines two of the most active areas of current intermediate energy nuclear physics research electromagnetic phenomena as studied by means of electron scattering and photonuclear processes and mesonic effects in nuclei The potential value of photopion studies as a complement to electron scattering for the study of spin isospin aspects of nuclear transitions has been widely recognized for about a decade thanks to the theoretical work at such institutions as Stanford and Catholic Universities In fact some of this theoretical work was done in anticipation of the advent of the new high duty cycle and good energy resolution electron linacs The potential for using this reaction to study mesonic effects was not as broadly addressed at that time However as seen in the following pages of these proceedings that situation has dramatically changed
