## **Physical Basis Of Predication:**

**The Physical Basis of Predication** Andrew Newman, 1992-10-30 In this book about metaphysics the author defends a realistic view of universals characterizing the notion of universal by considering language and logic the idea of possibility hierarchies of universals and causation He argues that neither language nor logic is a reliable guide to the nature of reality and that basic universals are the fundamental type of universal and are central to causation All assertions and predication about the natural world are ultimately founded on these basic universals A distinction is drawn between unified particulars which reveal natural principle of unity and arbitrary particulars which lack such a principle unified particulars are the terms of causal relations and thus the real constituents of the world The world is not made up of events but of unified particulars and basic universals

**The Correspondence Theory of Truth** Andrew Newman, 2002-06-24 This work presents a version of the correspondence theory of truth based on Wittgenstein's Tractatus and Russell's theory of truth and discusses related metaphysical issues such as predication facts and propositions Like Russell and one prominent interpretation of the Tractatus it assumes a realist view of universals Part of the aim is to avoid Platonic propositions and although sympathy with facts is maintained in the early chapters the book argues that facts as real entities are not needed It includes discussion of contemporary philosophers such as David Armstrong William Alston and Paul Horwich as well as those who write about propositions and facts and a number of students of Bertrand Russell It will interest teachers and advanced students of philosophy who are interested in the realistic conception of truth and in issues in metaphysics related to the correspondence theory of truth and those interested in Russell and the Tractatus

**The Nature of True Minds** John Heil, 1992-09-25 This work proposes a way to a naturalistic synthesis one that accords the mental a place in the physical world alongside the non mental

**The Body in Mind** Mark Rowlands, 1999-11-28 In this book Mark Rowlands challenges the Cartesian view of the mind as a self contained monadic entity and offers in its place a radical externalist or environmentalist model of cognitive processes Cognition is not something done exclusively in the head but fundamentally something done in the world Drawing on both evolutionary theory and a detailed examination of the processes involved in perception memory thought and language use Rowlands argues that cognition is in part a process whereby creatures manipulate and exploit relevant objects in their environment It is not simply an internal process of information processing equally significantly it is an external process of information processing This innovative book provides a foundation for an unorthodox but increasingly popular view of the nature of cognition

**God and the Nature of Time** Garrett J. DeWeese, 2017-03-02 Is God temporal in time or atemporal outside of time Garrett DeWeese begins with contemporary metaphysics and physics developing a causal account of dynamic time Drawing on biblical material as well as discussions of divine temporality in medieval and contemporary philosophical theology DeWeese concludes that God is temporal but not in physical time as we measure it Interacting with issues in the history of philosophy contemporary philosophy of science and philosophy of religion this book offers students a

thorough introduction to the key issues and key figures in historical and contemporary work on the philosophy of time and time in theology *Commitment, Value, and Moral Realism* Marcel S. Lieberman, 1998-09-24 Despite the importance of commitment in moral and political philosophy there has hitherto been little extended analysis of it Marcel Lieberman examines the conditions under which commitment is possible and offers at the same time an indirect argument for moral realism He argues that realist evaluative beliefs are functionally required for commitment especially regarding its role in self understanding and since it is only within a realist framework that such beliefs make sense realism about values is a condition for the possibility of commitment itself His ambitious study addresses questions that are of great interest to analytic philosophers but also makes many connections with continental philosophy and with folk psychology sociology and cognitive science and will be seen as a distinctive intervention in the debate about moral realism *Explaining Attitudes* Lynne Rudder Baker, 1995-01-27 Explaining Attitudes develops an account of propositional attitudes practical realism *The World Without, the Mind Within* André Gallois, 1996-12-12 A challenging study of the character of our knowledge of our own intentional states **Subjects of Experience** E. J. Lowe, 2006-11-02 In this innovative study of the relationship between persons and their bodies E J Lowe demonstrates the inadequacy of physicalism even in its mildest non reductionist guises as a basis for a scientifically and philosophically acceptable account of human beings as subjects of experience thought and action He defends a substantival theory of the self as an enduring and irreducible entity a theory which is unashamedly committed to a distinctly non Cartesian dualism of self and body Taking up the physicalist challenge to any robust form of psychophysical interactionism he shows how an attribution of independent causal powers to the mental states of human subjects is perfectly consistent with a thoroughly naturalistic world view He concludes his study by examining in detail the role which conscious mental states play in the human subject s exercise of its most central capacities for perception action thought and self knowledge *A World of States of Affairs* D. M. Armstrong, 1997-03-06 Offers a comprehensive system of analytical metaphysics argued from a distinctive philosophical perspective *Causes and Coincidences* David Owens, 1992-08-28 In an important departure from theories of causation David Owens proposes that coincidences have no causes and that a cause is something which ensures that its effects are no coincidence In Causes and Coincidences he elucidates the idea of a coincidence as an event which can be analysed into constituent events the nomological antecedents of which are independent of each other He also suggests that causal facts can be analysed in terms of non causal facts including relations of necessity Thus causation is defined in terms of coincidence and coincidence without reference to causation David Owens challenges the ideas associated with Hume Davidson and Lewis constructing a theory which distinguishes nomological necessity and sufficiency from their logical counterparts He is able to offer novel solutions to the major problems of causation including the direction of causation the logical form of causal statements the distinction between causal connections and logical connections and the relationship between psychological and physical causation

**Supervenience and Mind** Jaegwon Kim,1993-11-26 This collection of essays presents the core of the work of influential philosopher Jaegwon Kim

**What Minds Can Do** Pierre Jacob,1997-01-23 This 1997 book explores the representational powers of a person s mind

Coming to Our Senses Michael Devitt,1996 Professor Devitt takes up one of the most important difficulties that must be faced by philosophical semantics namely the threat posed by holism

*Ontology, Modality and the Fallacy of Reference* Michael Jubien,1993-08-27 This is a book about the concept of a physical thing and about how the names of things relate to the things they name It questions the prevalent view that names refer to or denote the things they name Instead it presents a new theory of proper names according to which names express certain special properties that the things they name exhibit This theory leads to some important conclusions about whether things have any of their properties as a matter of necessity This will be an important book for philosophers in metaphysics and the philosophy of language though it will also interest linguists concerned with the semantics of natural language

*Ontology, Identity, and Modality* Peter van Inwagen,2001-03-22 This book gathers together thirteen of Peter van Inwagen s essays on metaphysics several of which have acquired the status of modern classics in their field They range widely across such topics as Quine s philosophy of quantification the ontology of fiction the part whole relation the theory of temporal parts and human knowledge of modal truths In addition van Inwagen considers the question as to whether the psychological continuity theory of personal identity is compatible with materialism and defends the thesis that possible states of affairs are abstract objects in opposition to David Lewis s extreme modal realism A specially written introduction completes the collection which will be an invaluable resource for anyone interested in metaphysics

Practical Reasoning about Final Ends Henry S. Richardson,1997-02-28 This book argues against philosophical opponents that we can determine our ends or goals rationally

*Intrinsic Value* Noah M. Lemos,1994-09-30 This book explores the justification of our beliefs about intrinsic value

Morality and Action Warren Quinn,1993 This collection contains Warren Quinn s most important contributions to moral philosophy and has been edited for publication by Philippa Foot

**Universals** James Porter Moreland,2014-12-18 Things are particulars and their qualities are universals but do universals have an existence distinct from the particular things describable by those terms And what must be their nature if they do This book provides a careful and assured survey of the central issues of debate surrounding universals in particular those issues that have been a crucial part of the emergence of contemporary analytic ontology The book begins with a taxonomy of extreme nominalist moderate nominalist and realist positions on properties and outlines the way each handles the phenomena of predication resemblance and abstract reference The debate about properties and philosophical naturalism is also examined Different forms of extreme nominalism moderate nominalism and minimalist realism are critiqued Later chapters defend a traditional realist view of universals and examine the objections to realism from various infinite regresses the difficulties in stating identity conditions for properties and problems with realist accounts of knowledge of abstract objects In addition the debate between Platonists and Aristotelians is examined alongside

a discussion of the relationship between properties and an adequate theory of existence. The book's final chapter explores the problem of individuating particulars. The book makes accessible a difficult topic without blunting the sophistication of argument required by a more advanced readership.
