Aston, 2006-04-13 This work is a timely contribution to the debates surrounding feminism theatre and performance The excellent cross generational mix of theatre scholars and practitioners engaging in lively cutting edge debates on critical topics make this essential reading for students and scholars in Theatre and Performance Studies as well as Gender Studies The Blackwell Companion to the Sociology of Families Jacqueline Scott, Judith Treas, Martin Richards, 2008-04-15 Tackling issues relevant to family life today this authoritative Companion shows why studying social change in families is fundamental for understanding the transformations in individual and social life across the globe Contains original essays by expert contributors on a wide range of topics relating to the sociology of families Includes coverage of social inequality parenting practices children s work the changing patterns of citizenship and multi cultural families Gives special attention to European and North American examples Discusses previously neglected groups including immigrant families and gays and lesbians Explores how revolutionary changes in aging longevity and sexual behavior have radically affected the experience of different generations and the relationships between them *Ethics and the New Genetics* H. Daniel Monsour, 2007-05-26 Everyday new advances are being made in the science of human genetics Accompanying progress in this area however are new ethical dilemmas At a think tank sponsored by the Canadian Catholic Bioethics Institute an interdisciplinary group of ethicists geneticists physicians lawyers and theologians gathered in an attempt to apply some features of Bernard Lonergan s notion of functional specialization to ethical debates surrounding genetics Editor H Daniel Monsour has brought together a series of articles presented at this think tank The articles accomplish two tasks first they explore some of the advances in human genetic that continue to prompt ethical debate and outline the different stances on those issues second they examine those stances in the context of Roman Catholic moral and religious thought Timely innovative and wide ranging this collection will be of interest to bioethicists and philosophers as well as religious and Lonerganian scholars *A Christian Response to the New Genetics* David H. Smith, Cynthia B. Cohen, 2003 Life is a gift that includes powers to be used and celebrated but that doesn t necessarily justify the use of every new power that comes along This volume appeals to both secular and religious readers in the centre of the great debate over our new genetic powers These essays affirm many traditional Christian perspectives and virtues while also introducing new insights transfer genetic manipulation patenting health insurance and the moral status of embryos They conclude that it is naive to either to reject outright or wholeheartedly embrace the new genetic powers In fact sometimes the best we can expect is to learn how to cope with moral uncertainty **Returning to Reality** Phillip M. Thompson, 2012-11-14 This book synthesizes the diverse reflections on technology by monk and spiritual writer Thomas Merton to develop a compelling contemplative critique of the threats and challenges of nuclear war communication technologies and biotechnologies that may alter what it means to be human At the core of his critique Merton opposes a

technological mentality that favors processes of efficiency and utility at the expense of our ultimate purpose a quest for the wisdom to guide us to the divine source of our being and reality To counter this modern idolatry Merton s insights offer a path of reflection balance and community More specifically Merton offers some constructive approaches and healing possibilities through a balanced approach to work a careful and intentional managing of technology and an accessing of the recuperative dimensions of nature In its conclusion the book brings the insights of these chapters together for a final reflection on how to maintain our humanity and our spiritual integrity in a technological world *Science in the*

Contemporary World Eric G. Swedin,2005-03-08 This work is a unique introductory A Z resource detailing the scientific achievements of the contemporary world and analyzing the key scientific trends discoveries and personalities of the modern age An authoritative reference survey of the modern age of scientific discovery *Science in the Contemporary World* is a scholarly yet accessible chronicle of scientific achievement from the discovery of penicillin to the latest developments in space exploration and cloning Over 200 A Z entries cover the full spectrum of contemporary science with emphasis on its diverse nature Within the last 50 years medicine has eradicated the killer disease smallpox but primarily because the virus can live only in humans Space probes have revealed that on Europa a moon of Jupiter an ice capped ocean with the potential to support life probably exists Marvels from animal psychology and deep sea exploration are also explored extensively

Trajectory of the 21st Century Lawrence J. Terlizze,2009-01-10 *Trajectory of the Twenty first Century* explores what many prophets of the twentieth century such as Oswald Spengler Paul Tillich Aldous Huxley Jacques Ellul and others have predicted would transpire in the current century Their vision included an out of control technological system and a return to religious sentiment that will ultimately undermine the system to which it is reacting This book aims to accurately present their positions and draw certain logical conclusions from them that pertain to the course of history in our time The book s theme argues that modernity is a secularized version of millennial Christianity which reaches its fullest development in the twenty first century and will regress into what Russian philosopher Nicholas Berdyaev called the new Middle Ages or a new religious period This will mean the twilight of modern technological society as its values of rationalism give way to a post-rationalist society Ironically decline will come through further technological advance Omnicide threatens through religious world war driven by transcendent values and modern weaponry Jihadist thinking and posthumanist technology both establish the omnicidal mentality New technologies such as genetic engineering and artificial intelligence created under millennial inspiration to reach for immortality could potentially bring an end to the human species either through a slow steady obsolescence or through environmental catastrophe The titanic forces of technological progress and regress are on a direct collision course in the twenty first century **Biotech Juggernaut** Tina Stevens,Stuart Newman,2019-01-21 *Biotech Juggernaut* Hope Hype and Hidden Agendas of Entrepreneurial BioScience relates the intensifying effort of bioentrepreneurs to apply genetic engineering technologies to the human species and to extend the commercial reach of synthetic biology or

extreme genetic engineering In 1980 legal developments concerning patenting laws transformed scientific researchers into bioentrepreneurs Often motivated to create profit driven biotech start up companies or to serve on their advisory boards university researchers now commonly operate under serious conflicts of interest These conflicts stand in the way of giving full consideration to the social and ethical consequences of the technologies they seek to develop Too often bioentrepreneurs have worked to obscure how these technologies could alter human evolution and to hide the social costs of keeping on this path Tracing the rise and cultural politics of biotechnology from a critical perspective Biotech Juggernaut aims to correct the informational imbalance between producers of biotechnologies on the one hand and the intended consumers of these technologies and general society on the other It explains how the converging vectors of economic political social and cultural elements driving biotechnology's swift advance constitutes a juggernaut It concludes with a reflection on whether it is possible for an informed public to halt what appears to be a runaway force *God's Judgments* Steven J. Keillor, 2007-01-11 What do God's judgments have to do with history Using historical events Steven J Keillor pursues the thesis that divine judgment can be a fruitful category for historical investigation and that Christianity is an interpretation of history more than a worldview or philosophy **Natural History**, 1998 **The Mirage of Dignity on the Highways of Human 'Progress'** Lukman Harees, 2012-01-16 The Modern Man is hypocritically boasting of unprecedented material progress in a world where inter alia millions daily go to bed hungry die or get killed through unwanted wars and preventable causes live in inhumane conditions vulnerable being exploited with ever widening inequality and might still ruling over right in international relations even in the post UDHR era an indictment on the collective conscience of mankind Besides the flame of materialism has been devouring time tested moral values causing chaos within the basic unit in society the family and relegating Man and his dignity to the level of animals and even manipulating his identity Therefore questions arise Is Moral law fading are political economic systems and institutions like UN failing in realizing the lofty goal of affording due dignity basic rights and social justice humanity deserves Can the bystanders be mere onlookers anymore This book seeks to dispassionately survey the yawning gap between the rhetoric and the ground reality in bringing about dignity and social justice for humanity from bystanders perspective in the light of these questions and underlines the imperative need for moral progress to go hand in hand to make Man assume his due role as the trustee on earth It also exhorts bystanders to close ranks as human dignity champions rights defenders identity protectors against onslaughts from power hungry politicians mighty powers and vested interests This is the need of the times and what our future progeny demands **Technoscience and Citizenship: Ethics and Governance in the Digital Society** Ana Delgado, 2017-01-05 This book provides insights on how emerging technosciences come together with new forms of governance and ethical questioning Combining science and technologies and ethics approaches it looks at the emergence of three key technoscientific domains body enhancement technologies biometrics and technologies for the production of space exploring how human bodies and minds the movement of citizens

and space become matters of technoscientific governance The emergence of new and digital technologies pose new challenges for representative democracy and existing forms of citizenship As citizens encounter and have to adapt to technological change in their everyday life new forms of conviviality and contestation emerge This book is a key reference for scholars interested in the governance of emerging technosciences in the fields of science and technology studies and ethics

New Scientist and Science Journal ,2001 *New Scientist* ,2001 Rights and Liberties in the Biotech Age Sheldon Krinsky, Peter Shorett, 2005-03-11 The authors in this book with their carefully reasoned calls for a genetic bill of rights seem to me to be making a powerful conservative argument and proposing amendments far more sensible human and rational than the zealotry promoted by men like More They are assuming there is great value in human beings as we have known them in plants and food crops as we have slowly and within clear boundaries develop them over millennia in the relationship between human being and the natural world REMAKING EDEN: HOW GENETIC ENGINEERING AND CLONING WILL TRANSFORM THE AMERICAN FAMILY.
