Long-term Ecological Monitoring in Olympic National Park Kurt Jeffrey Jenkins, Edward G. S. Schreiner, Andrea Woodward, 2002 **Monitoring Plant and Animal Populations** Caryl L. Elzinga, Daniel W. Salzer, John W. Willoughby, James P. Gibbs, 2009-05-11

Monitoring Plant and Animal Populations offers an overview of population monitoring issues that is accessible to the typical field biologist and land managers with a modest statistical background. The text includes concrete guidelines for ecologists to follow to design a statistically defensible monitoring program. User friendly practical guide written in a highly readable format. The authors provide an interdisciplinary scope to address the current widespread interest in monitoring in many environmental fields including pure and applied ecology, conservation biology, and wildlife management. Emphasizes the role of monitoring in adaptive management. Defines important terminology and contrasts monitoring with other data collection activities. Covers the applicable principles of sampling and shows how to design a monitoring project. Provides a step by step overview of the monitoring process illustrated by flow charts and references. The authors also offer guidelines for analyzing and interpreting monitoring data. Illustrates the foundation of management objectives and describes their components, types, and development. Describes common field techniques for measuring important attributes of animal and plant populations. Reviews different methods for recording monitoring data in the field, managing the data, and communicating data to policymakers.

Advances in Threat Assessment and Their Application to Forest and Rangeland Management John M. Pye, 2010

In July 2006 more than 170 researchers and managers from the United States, Canada, and Mexico convened in Boulder, Colorado to discuss the state of the science in environmental threat assessment. This two volume general technical report compiles peer reviewed papers that were among those presented during the 3 day conference. Papers are organized by four broad topical sections: Land, Air, and Water; Fire; and Pests, Biota, and are divided into syntheses and case studies. Land topics include discussions of forest land conversion and soil quality as well as investigations of species responses to climate change. Air and water topics include discussions of forest vulnerability to severe weather and storm damage modeling. Fire topics include discussions of wildland arson and wildfire risk management as well as how people perceive wildfire risk and uncertainty. Pests, biota topics include discussions of risk mapping and probabilistic risk assessments as well as investigations of individual threats including the southern pine beetle and *Phytophthora alni*. Ultimately this publication will foster exchange and collaboration between those who develop knowledge and tools for threat assessment and those who are responsible for managing forests and rangelands.

Environmental Social Sciences Ismael Vaccaro, Eric Alden Smith, Shankar Aswani, 2010-11-11

The relationship between human communities and the environment is extremely complex. In order to resolve the issues involved with this relationship interdisciplinary research combining natural sciences, social sciences, and humanities is necessary. In this 2010 book specialists summarise methods and research strategies for various aspects of social research devoted to environmental issues. Each chapter is illustrated with ethnographic and environmental examples ranging from Australia to Amazonia, from Madagascar to the United States, and

from prehistoric and historic cases to contemporary rural and urban ones It deals with climate change deforestation environmental knowledge natural reserves politics and ownership of natural resources and the effect of differing spatial and temporal scales Contributing to the intellectual project of interdisciplinary environmental social science this book shows the possibilities social science can provide to environmental studies and to larger global problems and thus will be of equal interest to social and natural scientists and policy makers

Learning Landscape Ecology Sarah E. Gergel, Monica G. Turner, 2006-04-18 Filled with numerous exercises this practical guide provides a real hands on approach to learning the essential concepts and techniques of landscape ecology The knowledge gained enables students to usefully address landscape level ecological and management issues A variety of approaches are presented including group discussion thought problems written exercises and modelling Each exercise is categorised as to whether it is for individual small group or whole class study

Field and Laboratory Methods in Primatology Joanna M. Setchell, Deborah J. Curtis, 2003-09-18 Field and Laboratory Methods in Primatology is a manual for students and researchers studying wild primates Technological advances allow fieldworkers to collect a wide range of data store samples for later analysis and collect information remotely These methods open up opportunities to gain new insights on previously studied populations and are the means of collecting data on species that have until now been difficult to study However information on the practicalities of using such methodology in the field has largely been lacking Here in this indispensable reference experienced fieldworkers provide the first comprehensive guide to the wide variety of techniques available for the study of wild primates Covering everything from pre trip planning to laboratory analysis of endocrine and genetic samples packed full of tips and emphasising practicalities and ethics throughout it is a must have for all field primatologists and others studying free ranging animals

Handbook of Methods in Cultural Anthropology H. Russell Bernard, Clarence C. Gravlee, 2014-07-08 The Handbook of Methods in Cultural Anthropology now in its second edition maintains a strong benchmark for understanding the scope of contemporary anthropological field methods Avoiding divisive debates over science and humanism the contributors draw upon both traditions to explore fieldwork in

practice The second edition also reflects major developments of the past decade including the rising prominence of mixed methods the emergence of new technologies and evolving views on ethnographic writing Spanning the chain of research from designing a project through methods of data collection and interpretive analysis the Handbook features new chapters on ethnography of online communities social survey research and network and geospatial analysis Considered discussion of ethics epistemology and the presentation of research results to diverse audiences round out the volume The result is an essential guide for all scholars professionals and advanced students who employ fieldwork

Handbook for Restoring Tidal Wetlands Joy B. Zedler, 2000-08-30 Efforts to direct the recovery of damaged sites and landscape date back as far as the 1930s If we fully understood the conditions and controlling variables at restoration sites we would be better equipped to predict the outcomes of restoration efforts If there were no constraints we could merely plant the restoration site and walk away However *Use of Thematic Mapper Imagery to Assess Water Quality, Trophic State, and Macrophyte Distributions in Massachusetts Lakes* Marcus C. Waldron, Peter A. Steeves, John T. Finn, 2001 *Managing for Healthy Ecosystems* David J. Rapport, Bill L. Lasley, Dennis E. Rolston, N. Ole Nielsen, Calvin O. Qualset, Ardeshir B. Damania, 2002-10-29 One of the critical issues of our time is the dwindling capacity of the planet to provide life support for a large and growing human population Based on a symposium on ecosystem health *Managing for Healthy Ecosystems* identifies key issues that must be resolved if there is to be progress in this complex area such as Evolving methods for regional ecosystem health assessment employing complex adaptive systems coupled with adaptive technologies to permit accurate determination of changes in regional and global environments Issues and methods for assessing monitoring and managing diversity and its impact on human health in the context of climate change agroecosystems restoration of forests politics culture and tradition Leading thinkers in the field provide a coherent synthesis and a benchmark for the practice of this emerging field worldwide The more than 100 peer reviewed papers are grouped into three major parts The first *Emerging Concepts* explores the diverse meanings of ecosystem health within ecological socio economic and human health perspectives and the linkages to related concepts such as ecological integrity sustainable development and ecological footprints The second part *Issues and Methods* introduces methods for assessing and monitoring ecosystem health including strategies for gaining political and stakeholder input and support for science based ecosystem management The final part *Case Studies* reports experiences of interdisciplinary teams grappling with specific issues in a variety of aquatic and terrestrial ecosystems
