Chemical Water and Wastewater Treatment VII Hermann H. Hahn, Erhard Hoffmann, Hallvard Ødegaard, 2002-05-31 Treating potable and polluted water for the world's population is still one of our most important challenges The United Nations estimate that more than 1.2 billion people suffer from inadequate water supply and an even larger number up to 4 billion people are without hygienic disposal of waste and wastewater Water technology and the necessary know how transfer has been the key objective of the Gothenburg symposia from the very beginning The contents of this book respond to these challenges and demonstrate the impressive development of the field of chemical water and wastewater treatment The Chemical Water and Wastewater Treatment Series provides authoritative coverage of the key current developments in the chemical treatment of water and wastewater in theory or practice and related problems such as sludge production and properties and the reuse of chemicals and chemically treated waters and sludges For the tenth in the series the contributions document the development of the field of chemical water and wastewater technology both in terms of new technological developments as well as public and administrative acceptance and approval of the solutions offered Such new developments include the use of membrane technology the application of computational tools for kinetic process modelling and optimisation as well as the use of advanced oxidation processes in actual water treatment Chemical Water and Wastewater Treatment VII covers fundamental science new technological developments and practical experience and is an invaluable reference source for engineers scientists and administrators active in the treatment of drinking water municipal and industrial wastewater and sludges Legacy, Pathogenic and Emerging Contaminants in the Environment Manish Kumar, Meththika

Vithanage, Sanjeeb Mohapatra, Kishor Acharya, 2021-12-30 This is the time when legacy pathogenic and emerging contaminants must be talked about understood and dealt with together While the geogenic contamination of the groundwater is a well established phenomenon that is considered as legacy contaminants that risk people's health globally both pathogenic and emerging contaminants like various water borne pathogens and pharmaceutical personal care products PPCPs are becoming imperative for their acute and chronic toxic effects While contaminated groundwater consumption leads to skin pigmentation hyperkeratosis kidney damage cardiovascular disease and children's overall development poor sanitation related pathogenic microorganisms cause a significant number of child and prenatal deaths Simultaneously

antibiotic microbial resistance AMR is expected to kill 100 million people by 2050 However there are rare texts that combine aspects of all these three under a single book cover This book gives an understanding of the occurrence fate and transport of geogenic microbial and anthropogenic contaminants in the groundwater It covers not only the scientific and technical aspects but also environmental legal and policy aspects for contaminant management in the environment under the paradigm shift of COVID 19 This book is intended to bring the focus on the natural contaminants biotic or abiotic in the post COVID Anthropocene which is illustrating a significant alteration of systems and the subsequent downstream impacts owing to globalization This book has compiled global work on emergence mass flow partitioning and activation of geogenic emerging and pathogenic contaminants in various spheres of environment with special emphasis on soil sediment and aquatic systems for enhancing the understanding on their migration and evolution for the welfare of mankind **Fate and Effects of**

Anticancer Drugs in the Environment Ester Heath, Marina Isidori, Tina Kosjek, Metka Filipič, 2020-01-01 The book provides current knowledge and research on the presence and effects of anticancer drug residues in the aqueous environment and covers all relevant aspects of the presence of these residues in wastewaters and natural aquatic systems where numerous analogies between their pharmacokinetics and pharmacodynamics in humans and their effects in the environment can be drawn This book comprises of 18 chapters and represents the combined work of leading scientists from different research institutions from across the globe We present the state of the art in the field of anticancer drug residues in the aquatic environment while being cognizant of the many challenges that remain **Removal of Trace Contaminants from the Air**
