Military Space Power James Fergusson, Wilson W.S. Wong, 2010-02-26 This handbook examines the militarization of space providing a fair and balanced discussion of the emerging issues concerning space security and defense The militarization of space is already underway with unpredictable consequences for the way war will be conducted in the future Military Space Power A Guide to the Issues examines the militarization of space from historical technological and geopolitical angles It traces space militarization from concepts proposed before World War II through the use of space for military surveillance and communications purposes to the actual deployment of weapons that pass through high altitude

space such as ballistic missiles and nuclear armed interceptors The book focuses on the main space pioneers like the United States Russia and China but also includes discussion of potential future players It looks at the state of current space technology but also projects how recent inventions or new discoveries might be weaponized for the space environment And it analyzes how the militarization of space might influence international relations The result is a fair and balanced discussion of the emerging issues concerning space security and defense

Weaponisation of Space: An Inevitable Reality and Plausible Fallout Group Captain PA Patil,2017-01-15 Militarily use of spacebased assets when integrated with operations assumes importance as one of the many force multipliers As on date outer space is being extensively used by the armed forces for varied services which include navigation intelligence surveillance reconnaissance environmental monitoring and advance warning The command and control in today's netcentric environment also depends on space resources Thus the use of outer space with spacebased assets in support of military operations leads to the deduction that space as a medium stands militarised Of late many of the dominant nations have developed or are expanding capabilities to attack the spacebased assets of potential adversaries to disrupt command and control structures Countries like the US and China are contesting for space supremacy and working towards developing spacebased weapons capable of being delivered from spacebased platforms These developments in turn are infusing a sense of insecurity amongst other international players including India and have raised concerns worldwide Development of spacebased weapons by any state has the potential to ignite a new arms race in space as many countries now possess the wherewithal for launching spacebased assets capable of carrying the required payloads Thus from the present capability of militarisation of space we seem to be graduating towards weaponisation of space As outer space has been designated as one of the global commons any sort of deployment or employment of space weapons raises concerns and any use of spacebased weapons will have unpleasant cascading effects In the absence of any international curb or law on space weaponisation it continues to be a conceptual possibility as well as an empirical reality

Quest for Space: The Indian Connect , 2014-02-15 Human endeavours in space over the past six decades have reached a stage that just about every facet of human life today has some complement of space capability contributing to it encompassing the entire spectrum from telecommunications navigation weather forecasting remote sensing broadcasting and disaster management Space exploration actually owes its origins to matters military with civil applications coming about as a by product Capability building in space thereafter has witnessed frenzied progress in the spheres of both the military and the civil commercial With an ever increasing number of countries joining the space bandwagon space is getting congested and competitive International legislation on space though well meaning is largely viewed to be inadequate to address the concerns of equitable access to space and more alarmingly is reticent on the issue of militarisation and weaponisation The Indian presence in the global space order is rather significant Ranking sixth globally in terms of space budget and technological capability India is capable of going beyond its calling Its multi dimensional space programme spans almost the entire spectrum from space launch to satellite construction and their employment in a large array of development centric applications and in recent years in missions beyond the Earth The Mangalyaan mission to Mars currently underway symbolises India's indigenous technological prowess and is a harbinger of its capability of cementing its status as a responsible space player at the global level India thus stands today technologically robust and self reliant well poised in the global space order to look beyond its domestic charter and address the concerns of the international global community Space legislation situational awareness and international cooperation in space security are some of the geostrategic options analysed in this book which could facilitate Indian positioning in the global space order
